## Structural Engineering

### 1<sup>ST</sup> SEMESTER

<b>CV1901</b>	<b>Numerical Methods</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>Credits = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

COURSE OBJECTIVE	COURSE OUTCOMES
<ul style="list-style-type: none"> <li>Introduce students to the area of numerical methods and illustrate the far reaching nature and usefulness of these methods for engineering applications.</li> <li>Motivate students to learn more about, and to use numerical techniques in other courses and in future professional career</li> <li>Provide a solid understanding of the basic elements underlying development and use of numerical methods in engineering applications.</li> <li>Develop numerical skills and proficiency in using computer techniques</li> <li>Expose students to elements and challenges involved in numerically implementing the underlying mathematical derivations</li> <li>6. Provide a training environment in use of computational tools / languages</li> </ul>	<ul style="list-style-type: none"> <li>An ability numerically solve many types of problems such as Roots of equations, Systems of linear simultaneous equations, Numerical Differentiation and integration, Eigen value problems etc.</li> <li>An ability able to select from alternative methods the one method that is most appropriate for a specific problem.</li> <li>An ability to understand the limitations of each numerical method, especially the conditions under which they fail to converge to a solution.</li> <li>An ability to formulate algorithms to solve problems numerically.</li> </ul>

#### UNIT – I

##### **Solution of algebraic and transcendental equation:**

Regula Falsi Method, Newton-Raphson method, Development of Computer Program

#### UNIT – II

##### **Solution of linear algebraic equations:**

Gauss elimination, Cholesky method, Given's method, Householder's method.

#### UNIT – III

##### **Eigen values problems:**

Direct, Jacobi, Rutishauser's LR method, QR method.

#### UNIT – IV

##### **Initial & two point boundary value problem:**

Euler's, Runge-Kutta, Milne's Methods, Development of Computer Program.

#### UNIT – V

##### **Numerical Integration:**

Trapezoidal Method, Simpson's Method, Gauss Quadrature method, Development of Computer Program.

#### UNIT – VI

##### **Direct Integration Methods:**

Central difference method, Houbolt method, Newmark's method, Wilson -  $\theta$  method.

#### **Text Books**

### 1<sup>ST</sup> SEMESTER

<b>CV1902</b>	<b>Theory of Elasticity and Elastic Stability</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

COURSE OBJECTIVE	COURSE OUTCOMES
<ul style="list-style-type: none"> <li>To define plane stress and plane strain condition.</li> <li>To derive differential equations, boundary conditions and compatibility conditions for 2D and 3D stress analysis.</li> <li>To study the effect of bending of beams and torsion of non circular sections.</li> <li>To analyze the beam column, beam on elastic foundation.</li> <li>To study the buckling of column and simply supported rectangular plate.</li> </ul>	<ul style="list-style-type: none"> <li>After completion of course students will able to,</li> <li>Define plane stress and plane strain condition.</li> <li>Derive differential equations, boundary conditions and compatibility conditions for 2D and 3D stress analysis.</li> <li>Understand the effect of bending of beams and torsion of non circular sections.</li> <li>Analyze the beam column, beam on elastic foundation.</li> <li>Understand the buckling of column and simply supported rectangular plate.</li> </ul>

#### UNIT- I

I Introduction to Two Dimensional Stress Analysis, Types of forces, Components of stresses and strains, Stress-strain relation, Plane stress and plane strain, Strain at a point, Differential equation of equilibrium, Boundary conditions and compatibility equations (rectangular coordinates), Airy's stress function.

#### UNIT- II

Introduction to Three Dimensional Stress Analysis, Components of stress, Principal stresses, Stress invariants, Maximum shearing stress, Differential equation of equilibrium, Boundary conditions and compatibility equations.

#### UNIT- III

Bending of cantilever of narrow rectangular section loaded at end, bending of simply supported beam with uniform load, torsion of non-circular and elliptical cross section.

#### UNIT- IV

Differential equation for beams columns with concentrated loads, continuous lateral loads and couples for simply supported ends, Application of trigonometric series, Lateral buckling of beams.

#### UNIT- V

Energy method for elastic buckling of columns, Approximate method, Buckling of Columns on elastic foundation, Columns with intermediate compressive forces and distributed axial load, Columns with varying cross section.

#### UNIT- VI

Effect of shearing force on critical load, Buckling of built up columns, Buckling of simply supported rectangular plates uniformly compressed in middle plane.

### 1<sup>ST</sup> SEMESTER

<b>CV1903</b>	<b>Structural Dynamics</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

COURSE OBJECTIVE		COURSE OUTCOMES	
<ul style="list-style-type: none"> <li>•To provide the students clear and thorough understanding of modeling of discrete single-degree and multiple-degree vibratory systems and calculate the free and forced response of these systems.</li> <li>•To provide the students clear and thorough understanding of Calculation of the mode shapes and frequencies for the free response of continuous vibratory systems and use modal methods to calculate the forced response of these systems.</li> <li>•To provide the students understanding of modeling continuous vibratory systems – vibration of strings, axial and torsional vibration of bars and beams.</li> <li>•To provide the student with a basic understanding of IS codes related to earthquake loading.</li> </ul>		<ul style="list-style-type: none"> <li>• An ability to apply knowledge of mathematics, science, and engineering by developing the equations of motion for vibratory systems and solving for the free and forced response.</li> <li>• Ability to identify, formulate and solve engineering problems having motions varying with time. This will be accomplished by having students model, analyze and modify a vibratory structure, in order to achieve specified requirements.</li> <li>• Understanding professional and ethical responsibilities. This will be accomplished by emphasizing the importance of understanding how structural vibrations may affect safety and reliability of engineering systems.</li> <li>•An ability to Understand IS codes related to earthquake loading.</li> </ul>	

#### UNIT - I

Fundamentals of Rigid / Deformable body dynamics, Analysis of undamped and viscously damped single degree freedom systems.

#### UNIT - II

Response of single degree freedom systems to harmonic loading, support motion and transmissibility, Duhamel's integral.

#### UNIT - III

Multiple degree of Freedom system: Vibration of undamped 2 DOF systems; Response of 2 DOF to harmonic excitation, mode superposition, vibration absorber, Free vibration of MDOF (up to 3 DOF) systems, Dynamic response of MDOF (2 DOF) systems-modal superposition method. Energy Principle, Rayleigh's method (2 DOF)

#### UNIT - IV

Dynamic analysis of systems with distributed properties, Approximate design method, Transformation factors.

#### UNIT – V

Response spectra, generation and types of response spectra , Vibration of Continuous Systems: Free vibrations of Continuous systems-axial and transverse vibration of bars / beams. Response of continuous systems to dynamic loads.

#### UNIT - VI

Introduction to vibrations due to earthquake, Study of IS 1893 applicable to Buildings and Water Tanks.

**M. Tech. SoE and Syllabus 2014****Structural Engineering****1<sup>ST</sup> SEMESTER**

CV1904	Lab: Structural Dynamics	L=0	T=0	P=2	CREDITS = 1
<b>EVALUATION SCHEME</b>					
MSE – I	MSE – II	TA	ESE	TOTAL	ESE DURATION
--	--	40	60	100	--

COURSE OBJECTIVE	COURSE OUTCOMES
1. To provide the students clear and thorough understanding of modeling of discrete single-degree and multiple-degree vibratory systems and calculate the free and forced response of these systems. 2. To provide the students clear and thorough understanding of damping of systems and their relevance in displacements 3. To demonstrate phenomenon of soil liquefaction and mode shapes in water medium 4. To provide the students clear and thorough understanding of IS codes related to dynamic loading for buildings and elevated water tanks	1. An ability to understand the behavior of vibratory system during cyclic loading.  2. An ability to understand phenomenon like damping and its relevance in actual structural applications.  3. An ability to understand the effect of earthquake phenomenon on water media and subsoil. 4. An ability to understand provision of various Indian standards for design of structures from seismic safety point of view.
Mapped programme outcomes b,f	

**PRACTICALS**

1. To study various instruments for imparting dynamic forces.
2. To study various instruments for the response of vibrating structure.
3. To study the response of a single degree of lumped mass system subjected to base excitation.
4. To study the response of a two degree of freedom system building frame subjected to base motion.
5. To study the response of a multi degree of lumped mass system.
6. Verification of natural frequency of SDOF model under free vibration.
7. To study the liquefaction of soil structure.
8. To study the Earthquake induced waves in rectangular water tank.
9. To calculate horizontal seismic force of building using IS-1893.
10. To calculate the lateral forces in water tank due to Earthquake when water tank is empty and water tank is full by IS-1893.

## M. Tech. SoE and Syllabus 2014 Structural Engineering

### 1<sup>ST</sup> SEMESTER

CV1905	Matrix Analysis of Structures	L=3	T=0	P=0	CREDITS = 3
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

### COURSE OBJECTIVES

After completion of syllabus students will able to,

- Understand basic concepts of stiffness method of matrix analysis.
- Analyse the structures using stiffness method.
- Apply softwares of structural analysis based on this method.

#### UNIT - I

Introduction to stiffness and flexibility approach, Stiffness matrix for spring, Bar, torsion, Beam (including 3D), Frame and Grid elements, Displacement vectors, Local and Global co-ordinate system, Transformation matrices, Global stiffness matrix and load vectors, Assembly of structure stiffness matrix with structural load vector, application to spring and bar problems.

#### UNIT - II

Analysis of Plane Truss, Space Truss by Stiffness Method

#### UNIT - III

Analysis of Beam, Plane Frame, Space Frame by Stiffness Method

#### UNIT - IV

Analysis of Plane Grid by Stiffness Method

#### UNIT - V

Analysis for member loading (self, Temperature & Imposed) Inclined supports, Lack of Fit, Initial joint displacements. Effect of shear deformation, internal member end releases

#### UNIT - VI

Analysis of building systems for horizontal loads, Buildings with and without rigid diaphragm, various mathematical models and introduction to Solution techniques.

<b>CV1907</b>	<b>Design of Substructures</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

**COURSE OBJECTIVES**

After completion of syllabus students will able to

- Understand design of composite foundation systems of shallow foundations.
- Understand design of deep foundation systems.
- Analyze and understand various foundation failures.

**UNIT – I**

Introduction to soil structure interaction, Bearing Capacity of Foundations, Theories, In-situ tests; Settlement Analysis, factors affecting settlement, control of excessive settlements; Soil classification, Geotechnical design parameters. Design of different isolated and combined footings including eccentric loading.

**UNIT – II**

Design of raft foundation. Types of rafts, Design of Flat slab raft foundation and Design of beam and slab raft foundation.

**UNIT – III**

Function and Classification of piles, Concrete piles, Precast and cast-in-situ piles, Static point and skin resistance capacity of a Pile, pile load tests, Pile settlements, design of RCC piles, Various pile group patterns, Efficiency of Pile in group, Negative skin friction, Pile Cap design, Under reamed pile foundation, design of well foundation.

**UNIT – IV**

Introduction to machine foundations and its practical considerations for construction IS code of practice, introduction to analysis and design of simple machine foundation. Theory of sub grade reaction, beam on elastic foundation.

**UNIT – V**

Effects of earthquakes on foundation structures, IS1893-2002 recommendations for layout of foundation, classification of foundation strata, types of foundations allowed in sandy and other soils, soil liquefaction, ground settlement, methods to prevent liquefaction and settlement.

**UNIT – VI**

Analysis and design of Cantilever, counter fort and basement retaining walls and abutments. Introduction to reinforced earth retaining walls, skin walls.

**Text Books**

1. Sawmi Saran, " Analysis and Design of Substructures", , Oxford and IBH Publishing Co. Pvt. Ltd, New Delhi.

<ul style="list-style-type: none"> <li>To provide the student with knowledge and analysis skills in applying basic laws and steps used in solving the problem by finite element method.</li> <li>To provide the student the knowledge of various interpolation functions and elements to solve simple problems by finite element method.</li> <li>To provide the student with some knowledge in isoparametric transformation.</li> <li>To provide students the knowledge of mathematical modelling techniques.</li> <li>To develop the student's skills in applying FEM solution steps by using software.</li> </ul>	<ul style="list-style-type: none"> <li>Students will demonstrate an ability to derive element matrix equation by different methods by applying basic laws in structural analysis.</li> <li>Students will demonstrate an ability to apply the steps required for FEM solution to variety of physical systems.</li> <li>Students will demonstrate an ability to create models for simple structures.</li> <li>Students will demonstrate the ability to evaluate and interpret FEA analysis results for design and evaluation purposes.</li> <li>Students will be able to extend the knowledge of the application of FE to solve civil engineering problems.</li> </ul>

#### UNIT – I

Principles and discretization, Elements stiffness formulation based on direct and, variational techniques, Rayleigh Ritz Method for Bar and Beam analysis.

#### UNIT – II

Shape functions, Finite Element Formulation using Cartesian Coordinates, Application to 1D problems, Convergence criteria

#### UNIT – III

Triangular and Rectangular element formulation using Cartesian Coordinates, Application to 2D stress analysis.

#### UNIT – IV

Natural coordinates, Numerical integration, Isoparametric elements, Application to 1D Problems, Isoparametric elements for two-dimensional stress analysis.

#### UNIT – V

Shape Functions for three Dimensional Stress analysis, Axi-symmetric Stress Analysis.

#### UNIT – VI

Modelling techniques and solution techniques, Computer Implementation of FEM Procedure for 1D & 2D problems.

<ul style="list-style-type: none"><li>To correlate moment curvature relation in pure bending and to derive equation of deflection for circular and thin rectangular plates.</li><li>To derive Lagrange's equation and Navier's solution for thin plates.</li><li>To explain the concept of finite difference method and its application.</li><li>To study the shear deformation theories for plates.</li><li>To classify the shells and its geometry and to explain the concept of various theory for shells.</li></ul>	<ul style="list-style-type: none"><li>After completion of syllabus students will able to Correlate moment curvature relation in pure bending and to derive equation of deflection for circular and thin rectangular plates.</li><li>Derive Lagrange's equation and Navier's solution for thin plates.</li><li>Explain the concept of finite difference method and its application.</li><li>Understand the shear deformation theories for plates.</li><li>5. Classify the shells and its geometry and to explain the concept of various theory for shells</li></ul>

**UNIT – I**

Development of governing differential equations by Kirchoff's theory with reference to thin rectangular plates with various boundary conditions. Symmetrical bending of laterally loaded circular plates with different boundary conditions.

**UNIT- II**

Study of Simply supported plates under different loadings. Navier's solution. Introduction to Levis solution. Finite difference method.

**UNIT – III**

Introduction to shear deformation theories for plates.

**UNIT – IV**

Classification of Shells. Membrane theory of cylindrical shells with different directrix such as circular, cycloidal, catenary, and parabolic.

**UNIT – V**

Bending theory of cylindrical shells, Finsterwalde, Schorer's, and D-K-J theory.

**UNIT – VI**

Approximate analysis of cylindrical shells by beam arch method.

**Text Books**

**2<sup>nd</sup> SEMESTER**

<b>CV1913</b>	<b>Earthquake &amp; Wind Effects on Structures</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

**COURSE OBJECTIVES**

After completion of syllabus students will able to

- Understand basic concepts of earthquake engineering
- Understand behavior of structural components under earthquake and wind loading
- Understand concepts of earthquake resistance design
- Understand various codes related to earthquake and wind effects on structures
- Understand Wind Characteristics and concept of Mathematical Modeling.

**UNIT – I**

Origin of earthquake, Engineering geology of earthquakes, faults, Propagation of earthquake waves, quantification of earthquake (magnitude, energy, intensity of earthquake), Measurement of earthquake (accelerograph, accelogram recording and analysis of earthquake records), determination of magnitude, epicenter distances, Seismicity of the world.

**UNIT- II**

Causes or sources of earthquake damage, damage due to ground failure, History of past Earthquakes, generation of response spectrum from available earthquake records, Earthquake design spectrum and inelastic spectrum. Evolution of seismic risk.

**UNIT – III**

Concepts of earthquake resistance design, Design philosophy, four virtues of earthquake resistance design (stiffness, strength, ductility and configuration). Introduction to capacity design concept, Study of IS: 1893, Study of IS: 13920 for analysis and ductile design of RCC structures.

**UNIT – IV**

Wind Characteristics: Historical Wind Speed Data, Wind Speed Map of India, Practical Knowledge of Cyclones and Tornadoes.

**UNIT-V**

Static Wind effects and Building Codes with particular reference to IS – 875 ( Part III ).

**UNIT-VI**

Dynamic Wind Effects: Wind Induced Vibrations, Self excited motion, Analysis for dynamic wind loads, Vibration Control and Structural Monitoring.

**COURSE OBJECTIVES**

After completion of syllabus students will able to get the knowledge about the design of

- Bridges.
- Water tanks.
- Multistoried buildings.
- Silos & Bunkers.

**UNIT – I**

Analysis and design of Multistoried buildings, calculation of loads, Approximate analysis, Preliminary sizing, Ductile detailing.

**UNIT – II**

Analysis and Design of Elevated service Reservoirs, IS Recommendations for wind &amp; earthquake, Ductile detailing.

**UNIT – III**

Analysis and Design of bridges and Culverts, IRC Recommendations.

**UNIT – IV**

Analysis and design of Cylindrical Shells, Silos, and Bunkers, IS recommendations.

### 2<sup>nd</sup> SEMESTER

CV1915	PE-I Prestressed Concrete	L=3	T=0	P=0	CREDITS = 3
EVALUATION SCHEME					
MSE – I	MSE – II	TA	ESE	TOTAL	ESE DURATION
15	15	10	60	100	3 hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ul style="list-style-type: none"> <li>To understand the basic concepts of Prestressed concrete.</li> <li>To study various devices used for Prestressing.</li> <li>To analysis and design the basic structural members in Prestressed concrete</li> <li>To analysis and design the special structures like Prestressed Concrete Pipes, Liquid Storage Tanks and Ring Beams</li> </ul>	<ul style="list-style-type: none"> <li>After completion of syllabus students will able to</li> <li>Understand the basic concepts of prestressed concrete.</li> <li>Define various devices used for prestressing.</li> <li>Analysis and design the basic structural members in Prestressed concrete.</li> <li>5. Analysis and design the special structures like Prestressed Concrete Pipes, Liquid Storage Tanks and Ring Beams.</li> </ul>

#### UNIT – I

Limit state design of statically determinate prestressed beams - limit state of collapse against flexure, shear, torsion - limit state of serviceability - Design of end block - Anchorage zone stresses for post tensioned members.

#### UNIT – II

Statically indeterminate structures - analysis and design of continuous beams and frames Choice of cable profile - linear transformation - concordancy.

#### UNIT – III

Composite sections of prestressed concrete beam and cast in situ RC slab - analysis of stresses - differential shrinkage - deflections - Flexural and shear strength of composite sections - Design of composite sections.

#### UNIT – IV

Time dependant effects such as creep, shrinkage - Partial prestressing - Limit State design of partially prestressed concrete beams - Balanced moment capacity of rectangular and flanged sections - Crack and crack width computations. Analysis and design of prestressed concrete pipes, tanks, slabs – one way and two way (numerical problems restricted to pipes and tanks only).

#### Text Books:

<b>EVALUATION SCHEME</b>					
MSE – I	MSE – II	TA	ESE	TOTAL	ESE DURATION
15	15	10	60	100	3 hours

**Unit I**

Introduction: definition, Classification and characteristics of Composite materials, advantages and limitations. Current Status and Future Prospects; Basic Concepts and characteristics: Homogeneity and Heterogeneity, Isotropy, Orthotropy and Anisotropy; Characteristics and configurations of lamina, laminate, micromechanics and macromechanics.

**Unit II**

Constituent materials and properties ; Elastic behavior of unidirectional lamina: Anisotropic, separately orthotropic and transversely isotropic materials, stress-strain relations for thin lamina, transformation of stress and strain, transformation of elastic parameters ; Strength of unidirectional lamina:

**Unit III**

Macromechanical failure theories- Maximum stress theory, maximum strain theory, Deviatoric strain energy theory (Tsai-Hill), Interactive tensor polynomial theory (Tsai-Wu); Elastic Behavior of multidirectional laminates: Basic assumptions, Stress-strain relations, load deformation relations, symmetric and balanced laminates, laminate engineering properties ;

**Unit IV**

Bending and vibration of laminated plates: Governing equations, Deflection of simply supported rectangular symmetric angle-ply, specially orthotropic, anti-symmetric cross-ply laminates ; Recent advances: Functionally graded materials, Smart materials.

**UNIT-I**

Steel fiber reinforced concrete, Properties, Aspect ratio, strength and durability.  
Fiber reinforced plastics, other types of fibers and their applications.

09 Hrs.

**UNIT-II**

Light weight concrete, foam concrete, flyash concrete, workability, durability and application.

10 Hrs.

**UNIT-III**

High-grade concrete, high strength performance concrete, trimix concrete.

New engineering materials like light weight steel profile, aluminum profile, pressed steel sections.

10 Hrs.

**UNIT-IV**

Introduction to steel concrete composite including infill, encased section, properties of shear connectors, use of IS:11384, IRC 220.

10 Hrs.

15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
1. To understand smart system	1. An ability to understand passive and active systems.
2. To understand characteristics and behavior of smart materials	2. An ability to understand the characteristics and behavior of smart materials
3. To understand control system and its applications	3. An ability to understand control system and its applications
4. To understand modeling of control system and its applications	4. An ability to understand modeling of control system and its applications
Mapped programme outcomes a,b,d	

#### UNIT – I

Introduction to passive and active systems – need for active systems– smart systems – definitions and implications - active control and adaptive control systems – examples.

#### UNIT – II

Components of smart systems– system features and interpretation of sensor data – pro active and reactive systems – demo example in component level – system level complexity Materials used in smart systems – characteristics of sensors – different types smart materials – characteristics and behavior of smart materials – modeling smart materials – examples

#### UNIT – III

Control Systems – features – active systems – adaptive systems – electronic, thermal and hydraulic type actuators – characteristics of control systems – application examples.

#### UNIT – IV

Integration of sensors and control systems – modeling features – sensor-response integration– processing for proactive and reactive components – FE models – examples.

<b>CV1923</b>	<b>PE-III Tall Buildings</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
1.To understand horizontal load acting on a building i.e. earthquake and wind and design the building for above loading by providing shear walls / shear core.  2.To understand various aspects of high rise building such as the effect of torsion, soft storey effect, p-delta effect and drift index. 3.To understand detailing of RCC members for ductile behavior as IS Codes provisions.	1. An ability to analyze the high rise structures by considering various loads.  2. An ability to design RCC structures with ductile detailing.  3. An ability to use mathematical modeling techniques to design high rise structures. 4. An ability to understand IRC codes related to earthquake and wind load.
Mapped program outcomes a, b, c, g	

#### UNIT – I

Earthquake & wind load Calculations along with dead load & live loads by Static analysis.  
Introduction to Frame – shear wall buildings, Mathematical modeling of buildings with different Structural systems. Analysis & Design of shear walled buildings.

#### UNIT – II

Special aspects in Multi- Story buildings like effect of torsion, flexible first storey, p- delta effect, Soil – Structure Interaction on building response, drift limitations.  
Ductility of reinforced members subjected to flexure.  
Design of braced columns using codal provisions.

#### UNIT – III

Beam – column jointed for ductile behaviors.  
Multistory building with bracings & infills.

#### UNIT – IV

Introduction to Diaphragm. Seismic design of floor diaphragm..

### COURSE OBJECTIVES

At the end of the course the student will be able to

- Analysis and design of structures related to water supply and treatment plants.

### SYLLABUS

#### UNIT - I

Design of rectangular RCC reservoirs.

#### UNIT - II

Design of circular RCC reservoirs.

#### UNIT - III

Design of jack well/Pump house / approach bridges.

#### UNIT - IV

Design of pretreatment units: clarifloculators, aerators, flash Mixture, sand filters etc.

#### Text Books:

**M. Tech. SoE and Syllabus 2014****Structural Engineering****3<sup>rd</sup> SEMESTER**

CV1925	PE-III Bridge Engineering	L=3	T=0	P=0	CREDITS = 3
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
1.To provide the students clear and through understanding of various types of bridges and loadings. 2.To provide the students the knowledge of design philosophy for bridges and design of its components. 3.To provide the concept of earthquake behavior and design philosophy for retaining wall and abutments. 4.To provide the students a thorough understanding of IRC codes related to bridges.	1. An ability to identify the types of bridge to be used for various site and loading conditions. 2. An ability to analyze and design various types of bridges and its components. 3. An ability to draw RCC detailing and to prepare working drawing. 4. An ability to understand IRC codes related to bridges.
Mapped program outcomes a, b, e, f, g	

**UNIT – I**

Types of bridge superstructure and introduction to their design, sub-structure, bearings, IRC / IRS Bridge loadings and other codal recommendations.

**UNIT – II**

Seismic design philosophy for Bridges, State of art modeling of bridges, Seismic Design of Substructures, Capacity design of substructures and ductile detailing, Seismic design of well and pile foundations.

**UNIT – III**

Earthquake behavior and Design of retaining wall and Abutments, IS code recommendations.

**UNIT – IV**

Design of Bearings (Free, Guided and Restrained). Introduction to long span bridges: cable stayed bridges and suspension bridges.

**Text Books:**

1. N. Krishna Raju, Design of bridges, Oxford & IBH publishing Co. Ltd., New Delhi.
2. D. Johnson Victor, Essentials of bridge engineering, Oxford & IBH publishing Co. Ltd., New Delhi.
3. Jagdeesh R. and Jairam M., " Design of bridges", PHI Publication New Delhi, 2<sup>nd</sup> edition,

**Reference Books:**

<b>CV1926</b>	<b>PE-IV Plastic Analysis &amp; Design of Steel Structure</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

**UNIT I:**

Plastic behavior, review curves of structural steel, plastic moments, shape factors, load factors, plastic hinge, types of collapse, collapse mechanism, collapse load factor.

**UNIT II:**

Upper and lower bound, uniqueness theorems, principle of virtual work, statical method, minimum and maximum theorems, step by step method.

**UNIT III:**

Methods of release of restrains, load interaction diagrams, method of inequalities.

**UNIT IV:**

Plastic Moment distribution applied to continuous beams & portal frames (Max. two bays single storey)

**UNIT V:**

Effect of Axial force & Shear force on Plastic moment of resistance

**UNIT VI:**

Design of beams, continuous beams and portal frames up to two storey – two bays. Minimum weight analysis.

<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
1.To provide the students clear and through understanding of the basic concepts of earthquake resistance design. 2.To provide the students clear and through understanding of analysis and design aspects of RCC and steel members subjected to earthquake loads. 3.To provide the students clear and through understanding of detailing of RCC and steel members for ductile behavior. 4. To provide the students clear and through understanding of various Indian codes related to earthquake engineering.	1. An ability to apply basic concepts Earthquake resistant design in construction industry. 2. An ability to identify, formulate and solve engineering problems pertaining to earthquake effects on structures. 3. An ability to understand IS codes related to static as well as dynamic analysis of high rise buildings. 4. An ability to design special structures subjected to more effective earthquake forces.
Mapped program outcomes a, b, c, e	

**RCC Structures****UNIT - I**

Performance of RC buildings, behavior of RC buildings in past earthquakes, influence of unsymmetry, infill walls, foundations, soft story, confinement of concrete, and ductility.

**UNIT - II**

Capacity Design of RC Members, Design for Strong column & weak beam, Design of Beam-Column Joints.

**UNIT - III**

Shear wall with ductile detailing. Preliminary sizing and Modeling of RC Buildings, Ductility and factors affecting ductility of RC members.

**Steel Structures****UNIT - IV**

Performance of steel structures in past earthquakes, basics of Steel Design, introduction to plastic analysis and design, design philosophy for steel structures.

**UNIT - V**

Capacity design concept, Ductility of steel buildings, Seismic behavior of steel structures, Stability considerations.

**UNIT - VI**

Seismic Design and detailing of Moment Resistant Frames, Beams and Columns.

**UNIT-1: PLANNING OF INDUSTRIAL STRUCTURES :**

Classification of industries and local regulations - Factors affecting planning - General Aspects – Civil Engineering Aspects - Light and Ventilation.

**UNIT-2:****LARGE SPAN STRUCTURES IN INDUSTRIES**

Cable roofs - Types of cable roofs - Analysis of a cable subjected to concentrated loads and uniformly distributed load, Complexities in the analysis of a cable roof, Overview of deep beams, Virrendel Girder, Castellated Girders - Introduction to earthquake forces.

**UNIT-3****SILOS AND BUNKERS**

Concept of Angle of Repose - Pressure distribution - Dynamic loads - Stability of bunkers – Foundations.

**UNIT-4:****FOUNDATIONS FOR INDUSTRIAL STRUCTURES**

Machine foundations - General requirements - Design criteria - General analysis - Design of a block foundation for vertical compressor - Vibration Isolation - Foundations for Chimney and Microwave Towers.

## **Structural Engineering**

### 3<sup>rd</sup> SEMESTER

CV1929	Project Phase I	L=0	T=0	P=12	CREDITS = 6
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>CA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
		<b>100</b>		<b>100</b>	

The Project Phase – I shall start in semester III, and should preferably be literature survey of a live problem or a macro issue in the industry.

The work shall be continuously evaluated as per the norms/ guidelines set up by the B.O.S. for its assessment of 100 marks.

Evaluation of Project Phase – I shall consist of submission of report in a prescribed format based on a comprehensive and critical review of literature related to the topic selected for dissertation. Report should cover introduction, literature review, objective and scope of investigation and pilot studies carried out during the semester. The student will deliver the seminar thereon which will be assessed by panel of examiners.

**M. Tech. SoE and Syllabus 2014****Structural Engineering****4<sup>th</sup> SEMSTER**

CV1931	Project Phase II	L=0	T=0	P=20	CREDITS = 10
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>CA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
-----	-----	40	60	100	-----

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
1.To provide the students the academic environment to carry out literature survey of advanced topics in structural engineering. 2.To provide the students the understanding of real world structural engineering problems and their solution. 3. To motivate the students to use the modern tools and software. 4.To provide the students the understanding of various aspects like effective communication skills, working independently and in a team and the importance of lifelong learning etc. to carry out project.	1. An ability to understand the advances in structural engineering. 2.An ability to solve real world structural engineering problems. 3. An ability to understand the importance of lifelong learning and the use of modern tools. 4. An ability to work independently and in a team for effective communication.
Mapped program outcomes a, b, c, d, e, f, g	

**Contents:**

- The of detailed study of a work including collection and analysis of data, determining solution, design, scientific research on topic selected for dissertation.
- Preparation and presentation of progress seminars on topic selected for dissertation.
- Submission of project report on the entire studies carried out during the semester.
