		June 2018	1.00	Applicable for Sem 1 & 2 AY 2018-19 & Sem 3 & 4 AY 2019-20 Onwards
Chairperson	Dean (Acad. Matters)	Date of Release	Version	

Nagar Yuwak Shikshan Sanstha's  
**Yeshwantrao Chavan College of Engineering**  
 (An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)  
 M. Tech. SoE & Syllabi 2018-19 - **Structural Engineering**

**I SEMESTER**

<b>CV2901</b>	<b>Numerical Methods</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>Credits = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
Introduce students to the area of usefulness of numerical methods for engineering applications. <ul style="list-style-type: none"> <li>• Provide a solid understanding of the basic elements underlying development and use of numerical methods in engineering applications.</li> <li>• Develop numerical skills and proficiency in solving the problems of structural engineering using numerical methods.</li> <li>• Provide a training environment in use of computational tools / languages</li> </ul>	<ol style="list-style-type: none"> <li>1. An ability to understand the basic elements underlying development and use of numerical methods in engineering applications.</li> <li>2. An ability to provide numerical solution of various types of problems such as Roots of equations, Systems of linear simultaneous equations, Numerical Differentiation and integration, Eigen value problems etc.</li> <li>3. An ability to formulate algorithms to solve problems using modern computational tools.</li> </ol>

**UNIT – I** **[06 Hrs.]**

**Solution of algebraic and transcendental equation:**  
 RegulaFalsi Method, Newton-Raphson method, Development of Computer Program

**[07 Hrs.]**

**UNIT – II**  
**Solution of linear algebraic equations:**  
 Gauss elimination, Cholesky method, Given's method, Householder's method.

**[07 Hrs.]**

**UNIT – III**  
**Eigen values problems:**  
 Direct, Jacobi, Rutishauser's LR method, QR method.

**[06 Hrs.]**

**UNIT – IV**  
**Initial & two point boundary value problem:**  
 Euler's, Runge-Kutta, Milne's Methods, Development of Computer Program.

**[06 Hrs.]**

**UNIT – V**  
**Numerical Integration:**  
 Trapezoidal Method, Simpson's Method, Gauss Quadrature method, Development of Computer Program.

**[07 Hrs.]**

**UNIT – VI**  
**Direct Integration Methods:**  
 Central difference method, Houbolt method, Newmark's method, Wilson -  $\theta$  method.

		June 2018	1.00	Applicable for Sem 1 & 2 AY2018-19 & Sem 3 & 4 AY 2019-20 Onwards
Chairperson	Dean (Acad. Matters)	Date of Release	Version	

Nagar Yuwak Shikshan Sanstha's  
**Yeshwantrao Chavan College of Engineering**  
 (An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)  
 M. Tech. SoE & Syllabi 2018-19 - **Structural Engineering**

**I SEMESTER**

<b>CV2902</b>	<b>Theory of Elasticity and Elastic Stability</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
<ol style="list-style-type: none"> <li>1. To define plane stress and plane strain condition.</li> <li>2. To derive differential equations, boundary conditions and compatibility conditions for 2D and 3D stress analysis.</li> <li>3. To study the effect of bending of beams and torsion of non-circular sections.</li> <li>4. To analyze the beam column, beam on elastic foundation.</li> <li>5. To study the buckling of column and simply supported rectangular plate.</li> </ol>	<ol style="list-style-type: none"> <li>1. An ability to define plane stress and plane strain condition.</li> <li>2. An ability to derive differential equations, boundary conditions and compatibility conditions for 2D and 3D stress analysis.</li> <li>3. An ability to understand the effect of bending of beams and torsion of non-circular sections.</li> <li>4. An ability to analyze the beam column, beam on elastic foundation.</li> <li>5. An ability to understand the buckling of column and simply supported rectangular plate.</li> <li>6. An ability to understand the effect of shear on critical load on column.</li> </ol>

**UNIT- I** **[07 Hrs.]**  
 Introduction to Two Dimensional Stress Analysis, Types of forces, Components of stresses and strains, Stress-strain relation, Plane stress and plane strain, Strain at a point, Differential equation of equilibrium, Boundary conditions and compatibility equations (rectangular coordinates), Airy's stress function.

**UNIT- II** **[06 Hrs.]**  
 Introduction to Three Dimensional Stress Analysis, Components of stress, Principal stresses, Stress invariants, Maximum shearing stress, Differential equation of equilibrium, Boundary conditions and compatibility equations.

**UNIT- III** **[06 Hrs.]**  
 Bending of cantilever of narrow rectangular section loaded at end, bending of simply supported beam with uniform load, torsion of non-circular and elliptical cross section.

**UNIT- IV** **[07 Hrs.]**  
 Differential equation for beams columns with concentrated loads, continuous lateral loads and couples for simply supported ends, Application of trigonometric series, Lateral buckling of beams.

**UNIT- V** **[07 Hrs.]**  
 Energy method for elastic buckling of columns, Approximate method, Buckling of Columns on elastic foundation, Columns with intermediate compressive forces and distributed axial load, Columns with varying cross section.

**UNIT- VI** **[06 Hrs.]**  
 Effect of shearing force on critical load, Buckling of built up columns, Buckling of simply supported rectangular plates uniformly compressed in middle plane.

**I SEMESTER**

<b>CV2903</b>	<b>Structural Dynamics</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
<ol style="list-style-type: none"> <li>1. To provide the students clear and thorough understanding of modeling of discrete single-degree and multiple-degree vibratory systems and calculate the free and forced response of these systems.</li> <li>2. To provide the students clear and thorough understanding of Calculation of the mode shapes and frequencies for the free response of continuous vibratory systems and use modal methods to calculate the forced response of these systems.</li> <li>3. To provide the students understanding of modeling continuous vibratory systems – vibration of strings, axial and torsional vibration of bars and beams.</li> <li>4. To provide the student with a basic understanding of IS codes related to earthquake loading.</li> </ol>	<ol style="list-style-type: none"> <li>1. An ability to apply knowledge of mathematics, science, and engineering by developing the equations of motion for vibratory systems and solving for the free and forced response.</li> <li>2. Ability to identify, formulate and solve engineering problems having motions varying with time. This will be accomplished by having students model, analyze and modify a vibratory structure, in order to achieve specified requirements.</li> <li>3. Understanding professional and ethical responsibilities. This will be accomplished by emphasizing the importance of understanding how structural vibrations may affect safety and reliability of engineering systems.</li> <li>4. An ability to Understand IS codes related to earthquake loading.</li> </ol>

**UNIT - I** **[07 Hrs.]**  
 Fundamentals of Rigid / Deformable body dynamics, Analysis of undamped and viscously damped single degree freedom systems.

**UNIT - II** **[06 Hrs.]**  
 Response of single degree freedom systems to harmonic loading, support motion and transmissibility, Duhamel's integral.

**UNIT - III** **[06 Hrs.]**  
 Multiple degree of Freedom system: Vibration of undamped 2 DOF systems; Response of 2 DOF to harmonic excitation, mode superposition, vibration absorber, Free vibration of MDOF (up to 3 DOF) systems, Dynamic response of MDOF (2 DOF) systems-modal superposition method. Energy Principle, Rayleigh's method (2 DOF)

**UNIT - IV** **[07 Hrs.]**  
 Dynamic analysis of systems with distributed properties, Approximate design method, Transformation factors.

**UNIT – V** **[06 Hrs.]**  
 Response spectra, generation and types of response spectra, Vibration of Continuous Systems: Free vibrations of Continuous systems-axial and transverse vibration of bars / beams. Response of continuous systems to dynamic loads.

**UNIT - VI**  
 Introduction to vibrations due to earthquake, Study of IS 1893 applicable to Buildings and Water Tanks.

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
<ol style="list-style-type: none"> <li>1. To provide the students clear and thorough understanding of modeling of discrete single-degree and multiple-degree vibratory systems and calculate the free response of these systems.</li> <li>2. To provide the students clear and thorough understanding of damping of systems and their relevance</li> <li>3. To demonstrate phenomenon of soil liquefaction and mode shapes in water medium</li> <li>4. To provide the students clear and thorough understanding of IS codes related to earthquake loading for buildings and elevated water tanks</li> </ol>	<ol style="list-style-type: none"> <li>1. An ability to understand the behavior of vibratory system during cyclic loading.</li> <li>2. An ability to understand phenomenon like damping and its relevance in actual structural applications.</li> <li>3. An ability to understand the effect of earthquake phenomenon on water media and subsoil.</li> <li>4. An ability to understand provision of various Indian standards for design of structures from seismic safety point of view.</li> </ol>

**PRACTICALS**

1. To study various instruments for imparting dynamic forces.
2. To study various instruments for the response of vibrating structure.
3. To study the response of a single degree of lumped mass system subjected to base excitation.
4. To study the response of a two degree of freedom system building frame subjected to base motion.
5. To study the response of a multi degree of lumped mass system.
6. Verification of natural frequency of SDOF model under free vibration.
7. To study the liquefaction of soil structure.
8. To study the Earthquake induced waves in rectangular water tank.
9. To calculate horizontal seismic force of building using IS-1893.
10. To calculate the lateral forces in water tank due to Earthquake when water tank is empty and water tank is full by IS-1893.

<b>CV2905</b>	<b>Matrix Analysis of Structures</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
After completion of syllabus students will able to, <ol style="list-style-type: none"> <li>1. Understand basic concepts of stiffness method of matrix analysis.</li> <li>2. Analyse the structures using stiffness method.</li> <li>3. Apply softwares of structural analysis based on this method.</li> </ol>	<ol style="list-style-type: none"> <li>1. An ability to understand the different types of structures</li> <li>2. An ability to apply the matrix stiffness method to model the behavior of planar trusses, beams, and frames;</li> <li>3. An ability to analyze any multistoried building using approximate methods of structural analysis.</li> <li>4. An ability to implement the method developing their own computer program to analyze structures.</li> </ol>

- UNIT - I** **[07 Hrs.]**  
 Introduction to stiffness and flexibility approach, Stiffness matrix for spring, Bar, torsion, Beam (including 3D), Frame and Grid elements, Displacement vectors, Local and Global co-ordinate system, Transformation matrices, Global stiffness matrix and load vectors, Assembly of structure stiffness matrix with structural load vector, application to spring and bar problems. **[06 Hrs.]**
- UNIT - II** **[06 Hrs.]**  
 Analysis of Plane Truss, Space Truss by Stiffness Method
- UNIT - III** **[07 Hrs.]**  
 Analysis of Beam, Plane Frame, Space Frame by Stiffness Method
- UNIT - IV** **[06 Hrs.]**  
 Analysis of building systems for horizontal loads, Buildings with and without rigid diaphragm, various mathematical models and introduction to Solution techniques.
- UNIT - V** **[07 Hrs.]**  
 Analysis of Plane Grid by Stiffness Method
- UNIT - VI** **[07 Hrs.]**  
 Analysis for member loading (self, Temperature & Imposed) Inclined supports, Lack of Fit, Initial joint displacements. Effect of shear deformation, internal member end releases

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
<ol style="list-style-type: none"> <li>1. To provide knowledge to develop models of various structures in the software package, and apply the required properties, boundary conditions and forces in the developed models</li> <li>2. To provide knowledge to analyse various structural elements by stiffness method of structural analysis.</li> <li>3. To provide knowledge to execute the programme using standard software package without any error</li> <li>4. To provide knowledge to understand the comparison of result between manual analysis and software analysis.</li> </ol>	<ol style="list-style-type: none"> <li>1. An ability to understand the latest computational techniques and software used for structural analysis.</li> <li>2. An ability to analyze beam for various loading and boundary conditions using Stiffness Method.</li> <li>3. An ability to analyze truss for various loading and boundary conditions using Stiffness Method.</li> <li>4. An ability to analyze plane frame and grid for various loading and boundary conditions using Stiffness Method</li> </ol>

1. Analyze a continuous beam with maximum three degree of Kinematic Indeterminacy using software package. Compare the software result of analysis with manual analysis result. For manual analysis use stiffness matrix method.
2. Analyze a continuous beam with sinking of support with maximum three degree of Kinematic Indeterminacy using software package. Compare the software result of analysis with manual analysis result. For manual analysis use stiffness matrix method.
3. Analyze a plane truss with maximum three degree of Kinematic Indeterminacy using software package. Compare the software result of analysis with manual analysis result. For manual analysis use stiffness matrix method. Conclude it from both the result.
4. Analyze a plane truss subjected to inclined roller support with maximum three degree of Kinematic Indeterminacy using software package. Compare the software result of analysis with manual analysis result. For manual analysis use stiffness matrix method.
5. Analyze a plane truss subjected to temperature effect and lack of fit with maximum three degree of Kinematic Indeterminacy using software package. Compare the software result of analysis with manual analysis result. For manual analysis use stiffness matrix method.
6. Analyze a space truss with maximum three degree of Kinematic Indeterminacy using software package. Compare the software result of analysis with manual analysis result. For manual analysis use stiffness matrix method.
7. Analyze a rigid sway frame one bay one story with maximum three degree of Kinematic Indeterminacy, using software package. Compare the software result of analysis with manual analysis result. For manual analysis use stiffness matrix method.
8. Analyze a plane grid using software package. Compare the software result of analysis with manual analysis result. For manual analysis use stiffness matrix method.
9. Analyze a multi storied frame structure subjected to horizontal forces using software package.

<b>CV2907</b>	<b>Design of Substructures &amp; Foundations</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
1. To provide the students knowledge of different types of foundation structures. 2. To provide the students knowledge of different types of loading applied on foundation structures. 3. To provide the students knowledge of different methods used for the analysis of foundation structures. 4. To provide the students, knowledge of different codal provisions applicable to advanced design of foundation structures. 5. To provide the students knowledge of design of deep foundation systems, machine foundations etc.	1. Ability to identify the type of foundations to be used for various site conditions 2. An ability to analyze and design different types of foundation structures. 3. An ability to draw RCC detailing and to prepare working drawing. 4. An ability to understand the importance of various codes used for different types of foundation structures.

[07Hrs.]

**UNIT – I**

Introduction to soil structure interaction, Bearing Capacity of Foundations, Theories, In-situ tests; Settlement Analysis, factors affecting settlement, control of excessive settlements; Soil classification, Geotechnical design parameters. Design of different isolated and combined footings including eccentric loading.

[06 Hrs.]

**UNIT – II**

Design of raft foundation. Types of rafts, Design of beam and slab raft foundation. Introduction to Design of Flat slab raft foundation.

[07 Hrs.]

**UNIT – III**

Function and Classification of piles, Static point and skin resistance capacity of a Pile, pile load tests, Pile settlements, design of RCC piles, Various pile group patterns, Efficiency of Pile in group, Negative skin friction, Pile Cap design, Under reamed pile foundation, Introduction to design of well foundation. IS 2911 Part I to Part V

[06 Hrs.]

**UNIT – IV**

Introduction to machine foundations and its practical considerations for construction IS code of practice, introduction to analysis and design of simple machine foundation. Theory of sub grade reaction, beam on elastic foundation.

[06 Hrs.]

**UNIT – V**

Effects of earthquakes on foundation structures, IS1893-2016 recommendations for layout of foundation. Ground improvements: Various methods, sand drains, stone columns, stabilization, grouting, reinforced earth, geotextiles, diaphragm walls, reinforced earth retaining walls, skin walls.

[07 Hrs.]

**UNIT – VI**

Analysis and design of Cantilever, counter fort and basement retaining walls and abutments

**Text Books**

An ability to extend the knowledge of finite element method to solve complex problems using various elements.</li> <li>4. An ability to understand solution and modeling techniques used in finite element method.</li> </ol>

- UNIT – I** [06 Hrs.]  
 Principles and discretization, Elements stiffness formulation based on direct and, variational techniques, Rayleigh Ritz Method for Bar and Beam analysis.
- UNIT – II** [07 Hrs.]  
 Shape functions, Finite Element Formulation using Cartesian Coordinates, Application to 1D problems, Convergence criteria
- UNIT – III** [06 Hrs.]  
 Triangular and Rectangular element formulation using Cartesian Coordinates, Application to 2D stress analysis.
- UNIT – IV** [07 Hrs.]  
 Natural coordinates, Isoparametric elements, Application to 1D Problems, Isoparametric elements for two-dimensional stress analysis.
- UNIT – V** [07 Hrs.]  
 Shape Functions for three Dimensional Stress analysis, Axi-symmetric Stress Analysis.
- UNIT – VI** [06 Hrs.]  
 Modelling techniques and solution techniques, Computer Implementation of FEM Procedure for 1D & 2D problems, Numerical integration.

COURSE OBJECTIVE	COURSE OUTCOMES
<ol style="list-style-type: none"> <li>1. To provide the students the academic environment to conduct a structural analysis using finite element software</li> <li>2. To motivate the students to use the modern tools and software.</li> <li>3. To provide the students the basic skills in using commercial finite element software and effective presentation of their analysis results.</li> <li>4. To provide the students the knowledge of finite element method for the analysis of structural engineering problems and their solution.</li> </ol>	<ol style="list-style-type: none"> <li>1. An ability to identify the information required to conduct a structural analysis using finite element software</li> <li>2. An ability to interpret the solutions obtained from finite element analyses.</li> <li>3. An ability to have basic skills in using commercial finite element software and effective presentation of their analysis results.</li> <li>4. An ability to communicate effectively in writing to report (both textually and graphically) the method used, the implementation and the numerical results obtained.</li> </ol>

Minimum **Six** practical based on theory syllabus

1. Analysis of 2D truss
2. Analysis of Bar subjected to various loading conditions
3. Analysis of beam subjected to various loading conditions
4. Analysis of Plane Stress problem (Plate, Plate with hole) using triangular & Quadrilateral element
5. Analysis of Plain Strain problem (Retaining wall, Culvert) using triangular & Quadrilateral element
6. Analysis of Axisymmetric problem (Cylinder, foundation) using triangular & Quadrilateral element
7. Analysis of 3D beams (Cantilever and Simply Supported) subjected to various loading conditions

<b>COURSE OBJECTIVES</b>	<b>COURSE OUTCOMES</b>
<ol style="list-style-type: none"> <li>1. To correlate moment curvature relation in pure bending and to derive equation of deflection for circular and thin rectangular plates.</li> <li>2. To derive Lagrange's equation and Navier's solution for thin plates.</li> <li>3. To explain the concept of finite difference method and its application.</li> <li>4. To study the shear deformation theories for plates.</li> <li>5. To classify the shells and its geometry and to explain the concept of various theory for shells.</li> </ol>	<ol style="list-style-type: none"> <li>1. An ability to correlate moment curvature relation in pure bending and to derive equation of deflection for circular and thin rectangular plates.</li> <li>2. An ability to derive Lagrange's equation and Navier's solution for thin plates and explain the concept of finite difference method and its application.</li> <li>3. An ability to understand the shear deformation theories for plates.</li> <li>4. An ability to Classify the shells and its geometry and to explain the concept of membrane theory for shells</li> <li>5. An ability to explain concepts of bending theory.</li> <li>6. An ability to apply the fundamentals of beam theory</li> </ol>

**UNIT – I** **[07 Hrs.]**  
 Development of governing differential equations by Kirchoff's theory with reference to thin rectangular plates with various boundary conditions. Symmetrical bending of laterally loaded circular plates with different boundary conditions.

**UNIT - II** **[06 Hrs.]**  
 Study of Simply supported plates under different loadings. Navier's solution. Introduction to Levis solution. Finite difference method.

**UNIT – III** **[06 Hrs.]**  
 Introduction to shear deformation theories for plates.

**UNIT – IV** **[07 Hrs.]**  
 Classification of Shells. Membrane theory of cylindrical shells with different directrix such as circular, cycloidal, catenary, and parabolic.

**UNIT – V** **[06 Hrs.]**  
 Bending theory of cylindrical shells, Finster walder, Schorer's, and D-K-J theory.

**UNIT – VI** **[07 Hrs.]**  
 Approximate analysis of cylindrical shells by beam arch method.

<b>CV2914</b>	<b>Earthquake &amp; Wind Effects on Structures</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVES</b>	<b>COURSE OUTCOMES</b>
<ol style="list-style-type: none"> <li>1. After completion of syllabus students will able to</li> <li>2. Understand basic concepts of earthquake engineering</li> <li>3. Understand behavior of structural components under earthquake and wind loading</li> <li>4. Understand concepts of earthquake resistance design</li> <li>5. Understand various codes related to earthquake and wind effects on structures</li> <li>6. Understand Wind Characteristics and concept of Mathematical Modeling.</li> </ol>	<ol style="list-style-type: none"> <li>1. An ability to apply the knowledge of geological feature, plate tectonics in understanding occurrence of earthquake.</li> <li>2. An ability to understand causes and sources of earthquake damages and possible response of structure and system to earthquake.</li> <li>3. An ability to understand characteristics of wind and its static and dynamic effects on structures</li> <li>4. An ability to understand relevant I.S. codes and philosophy in design of earthquake &amp; Wind resistant structure</li> </ol>

**UNIT – I** **[07 Hrs.]**

Origin of earthquake, Engineering geology of earthquakes, faults, Propagation of earthquake waves, quantification of earthquake (magnitude, & intensity of earthquake), Measurement of earthquake (accelerograph, accelogram recording and analysis of earthquake records), determination of magnitude, epicenter distances, Seismicity of the world.

**UNIT- II** **[07 Hrs.]**

Causes or sources of earthquake damage, damage due to ground failure, History of past Earthquakes, generation of response spectrum from available earthquake records, Earthquake design spectrum and inelastic spectrum. Evolution of seismic risk.

**UNIT – III** **[06 Hrs.]**

Concepts of earthquake resistance design, Design philosophy, and four virtues of earthquake resistance design (stiffness, strength, ductility and configuration). Introduction to capacity design concept, Study of IS: 1893, Study of IS: 13920 for analysis and ductile design of RCC structures.

**UNIT – IV** **[05 Hrs.]**

Wind Characteristics: Historical Wind Speed Data, Wind Speed Map of India, Practical Knowledge of Cyclones and Tornadoes.

**UNIT-V** **[07 Hrs.]**

Static Wind effects and Building Codes with particular reference to IS – 875 ( Part III ).

**UNIT-VI** **[07 Hrs.]**

Dynamic Wind Effects: Wind Induced Vibrations, Self excited motion, Analysis for dynamic wind loads, Vibration Control and Structural Monitoring.

An ability to analyze and design advanced concrete structures</li> <li>4. An ability to draw RCC detailing and to prepare working drawing.</li> </ol>

**UNIT – I** **[09 Hrs.]**

Analysis and design of Multistoried buildings, calculation of loads, Approximate analysis, Preliminary sizing, Ductile detailing as per IS 13920 :2015

**UNIT – II** **[10 Hrs.]**

Analysis and Design of Elevated service Reservoirs, IS Recommendations for wind & earthquake, Ductile detailing. as per IS 13920 :2015

**UNIT – III** **[10 Hrs.]**

IRC Recommendations, Analysis, Design & Detailing of bridges and Culverts.

**UNIT – IV** **[10 Hrs.]**

Analysis and design of, Silos, and Bunkers, IS recommendations.

<b>CV2916</b>	<b>PE-I New Engineering Materials</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
1. Understand various civil engineering materials 2. Understand various methods of testing of materials 3. Understand and use various codes related to the civil engineering materials	1. An ability to introduce different high quality materials for civil engineering applications. 2. An ability to use engineering materials for better and durable Civil Engineering Structures.

**Mapped program outcomes:**

**UNIT-I** **[09 Hrs.]**  
 Steel fiber reinforced concrete, Properties, Aspect ratio, strength and durability.  
 Fiber reinforced plastics, other types of fibers and their applications.

**UNIT-II** **[10 Hrs.]**  
 Light weight concrete, foam concrete, flyash concrete, workability, durability, and application.

**UNIT-III** **[10 Hrs.]**  
 High-grade concrete, high strength performance concrete, trimix concrete.  
 New engineering materials like light weight steel profile, aluminum profile, pressed steel sections

**UNIT-IV** **[10 Hrs.]**  
 Introduction to steel concrete composite including infill, encased section, properties of shear connectors, use of IS:11384, IRC 22.

<b>CV2917</b>	<b>PE I: Prestressed Concrete</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

COURSE OBJECTIVES	COURSE OUTCOMES
<ol style="list-style-type: none"> <li>1. To understand the basic concepts of Prestressed concrete.</li> <li>2. To study various devices used for Prestressing.</li> <li>3. To analyse and design the basic structural members in Prestressed concrete</li> <li>4. To analyse and design the special structures like Prestressed Concrete Pipes, Liquid Storage Tanks and Ring Beams</li> </ol>	<ol style="list-style-type: none"> <li>1. An ability to apply basic concepts of prestressed concrete in construction industry.</li> <li>2. An ability to identify, formulate and solve engineering problems pertaining to prestressed concrete.</li> <li>3. An ability to Understand IS codes related to prestressed concrete.</li> <li>4. An ability to design special prestressed structures.</li> </ol>

- UNIT – I** **[06 Hrs.]**  
 Introduction to prestressed concrete, types of prestressing, systems and devices, materials, losses in prestress. Analysis of PSC flexural members: basic concepts, stresses at transfer and service loads
- UNIT – II** **[07 Hrs.]**  
 IS1343 – 2012 codal provisions, Limit state of collapse and serviceability for analysis and design of rectangular, I and box sections for flexure and shear, control of deflection, Transmission of pre-stress in pre-tensioned members; Anchorage zone stresses for post-tensioned members.
- UNIT – III** **[07 Hrs.]**  
 Statically indeterminate structures - analysis and design of continuous beams and frames Choice of cable profile - linear transformation - concordancy.
- UNIT – IV** **[06 Hrs.]**  
 Composite construction with precast PSC beams and cast in-situ RC slab - Analysis and design, creep and shrinkage, deflection effects. Partial prestressing - principles, analysis and design concepts, crack-width calculations
- UNIT – V** **[07 Hrs.]**  
 Analysis and design of prestressed concrete slabs – one way and two way  
 Analysis and design of prestressed concrete pipes, tanks
- UNIT – VI** **[06 Hrs.]**  
 Introduction to prestressed concrete flat slabs, grids, folded plates and shells, railway sleepers  
 (No numerical problems).

1. To understand smart system 2. To understand characteristics and behavior of smart materials 3. To understand control system and its applications 4. To understand modeling of control system and its applications	1. An ability to understand passive and active systems. 2. An ability to understand the characteristics and behavior of smart materials 3. An ability to understand control system and its applications 4. An ability to understand modeling of control system and its applications

**UNIT – I**

Introduction to passive and active systems – need for active systems– smart systems – definitions and implications - active control and adaptive control systems – examples. **[10 Hrs.]**

**UNIT – II**

Components of smart systems– system features and interpretation of sensor data – pro active and reactive systems – demo example in component level – system level complexity Materials used in smart systems – characteristics of sensors – different types smart materials – characteristics and behavior of smart materials – modeling smart materials – examples **[09 Hrs.]**

**UNIT – III**

Control Systems – features – active systems – adaptive systems – electronic, thermal and hydraulic type actuators – characteristics of control systems – application examples. **[10 Hrs.]**

**UNIT – IV**

Integration of sensors and control systems – modeling features – sensor-response integration– processing for proactive and reactive components – FE models – examples. **[10 Hrs.]**

<b>COURSE OBJECTIVES</b>	<b>COURSE OUTCOMES</b>
1. To provide the students clear & thorough understanding of IS code related to reinforced concrete structures. 2. To provide the students clear & thorough understanding of reinforcement of essential parts of R. C. structures as per SP 34. 3. To provide the knowledge to understand the comparison of results between manual analysis & design and software analysis & design of simple member of R. C. structure.	1. An ability to demonstrate basic knowledge of structural engineering to advanced concrete structure. 2. An ability to understand the various parameter considered in analysis & design of simple members R. C. structures 3. An ability to design advanced concrete structures 4. An ability to present analysis and design result in schematic way

**PRACTICALS**

1. Review of IS 456, IS 962 Basics of Limit State Design (Beams, Columns, Slabs ) Design of Multistoried buildings
2. Design for axial force, flexural, shear and combined effects Slabs (one way & two way) and slabs on grades. Preliminary sizing, modeling, designing & detailing of R. C. C. structures
3. Design of Bunker/ Design of Bridge (Any One)

**III SEMESTER**

<b>CV2933</b>	<b>PE II: Tall Buildings</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
1. To understand earthquake load acting on a building and design the building for above loading by providing shear walls 2. To understand various aspects of high rise buildings such as the effect of torsion, soft storey effect, p- delta effect and drift index. 3. To understand detailing of RCC members for ductile behavior as IS Code provisions	1. An ability to understand fundamental concept, principle and application of earthquake engineering. 2. An ability to analyze and design RCC structures with ductile detailing as per Indian standards. 3. An ability to apply technical design principles and techniques such as P-delta effect, soil structure interaction for a design of high rise structures. 4. An ability to apply various provisions for earthquake resistance design of structures as per Indian standards.

**UNIT – I** **[10 Hrs.]**  
 Earthquake load Calculations along with dead load & live loads by Static analysis as per IS 1893-2016  
 Introduction to Frame – shear wall buildings, Mathematical modeling of buildings with different Structural systems. Analysis & Design of shear walled buildings with ductile detailing as per IS 13920-2016

**UNIT – II** **[10 Hrs.]**  
 Special aspects in Multi- Story buildings like effect of torsion, flexible first storey, P- delta effect, Soil – Structure Interaction on building response, drift limitations.  
 Ductility of reinforced members subjected to flexure.  
 Design of braced columns using codal provisions.

**UNIT – III** **[10 Hrs.]**  
 Beam – column jointed for ductile behaviors.  
 Multistory building with bracings & infills.

**UNIT – IV** **[09 Hrs.]**  
 Introduction to Diaphragm. Seismic design of floor diaphragm.

**Text Books:**

**III Semester**

<b>CV2934</b>	<b>PE II: Composite Structures</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS =3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
1. To provide the student knowledge of basic concepts and characteristics of Composite materials 2. To provide the student the knowledge of behavior of lamina 3. To provide the student with knowledge of various failure theories 4. To provide students the knowledge of analysis of laminated plates under bending and vibration.	1. An ability to understand basic concepts and characteristics of Composite materials. 2. An ability to understand elastic behavior of lamina. 3. An ability to understand various failure theories. 4. An ability to analyse laminated plates under Bending and vibration.

**Unit I**

Introduction: definition, Classification and characteristics of Composite materials, advantages and limitations. Current Status and Future Prospects; Basic Concepts and characteristics: Homogeneity and Heterogeneity, Isotropy, Orthotropy and Anisotropy; Characteristics and configurations of lamina, laminate, micromechanics and macro-mechanics.

[Hrs.]

**Unit II**

Constituent materials and properties; Elastic behavior of unidirectional lamina: Anisotropic, separately orthotropic and transversely isotropic materials, stress-strain relations for thin lamina, transformation of stress and strain, transformation of elastic parameters, Strength of unidirectional lamina

[Hrs.]

**Unit III**

Macro-mechanical failure theories- Maximum stress theory, maximum strain theory, Deviatoric strain energy theory (Tsai-Hill), Interactive tensor polynomial theory (Tsai-Wu); Elastic Behavior of multidirectional laminates: Basic assumptions, Stress-strain relations, load deformation relations, symmetric and balanced laminates, laminate engineering properties.

[Hrs.]

**Unit IV**

Bending and vibration of laminated plates: Governing equations, Deflection of simply supported rectangular symmetric angle-ply, specially orthotropic, anti-symmetric cross-ply laminates; Recent advances: Functionally graded materials, Smart materials.

[Hrs.]

**Text / Reference Books:**

**III SEMESTER**

<b>CV2936</b>	<b>PE III: Plastic Analysis&amp; Design of Steel Structure</b>	<b>L=3</b>	<b>T=0</b>	<b>P=0</b>	<b>CREDITS = 3</b>
<b>EVALUATION SCHEME</b>					
<b>MSE – I</b>	<b>MSE – II</b>	<b>TA</b>	<b>ESE</b>	<b>TOTAL</b>	<b>ESE DURATION</b>
15	15	10	60	100	3 hours

<b>COURSE OBJECTIVE</b>	<b>COURSE OUTCOMES</b>
After completion of syllabus students will able to 1. Understand behavior of steel structural members beyond yield point, understand the theories of plastic analysis and will be able to design steel structures considering plastic design approaches	1. An ability to understand behavior of steel structure elements beyond yield point loading and basic concepts of plastic analysis. 2. An ability to understand techniques for estimation of collapse loads on steel structures 3. To understand the effects of axial and shear forces on plastic moment of resistance 4. To understand philosophies of plastic design of steel structural elements

**UNIT I:** Plastic behavior, review curves of structural steel, plastic moments, shape factors, load factors, plastic hinge, types of collapse, collapse mechanism, collapse load factor. **[07 Hrs.]**

**UNIT II:** Upper and lower bound, uniqueness theorem, principle of virtual work, statical method, minimum and maximum theorems, step by step method. **[07 Hrs.]**

**UNIT III:** Methods of release of restrains, load interaction diagrams, method of inequalities. **[06 Hrs.]**

**UNIT IV:** Plastic Moment distribution applied to continuous beams & portal frames (Max. two bays single storey) **[07 Hrs.]**

**UNIT V:** Effect of Axial force & Shear force on Plastic moment of resistance, Design of simply supported and continuous beams. **[06 Hrs.]**

**UNIT VI:** Design of portal frames up to single storey – two bays. Minimum weight design.

**Text Book:**

1. Steel Skeleton, J. F. Baker, Volume II, Cambridge University Press 196
2. B.G. Neal – Plastic Method of Structural Analysis, Chapman & Hall

**RCC Structures**

**UNIT - I**

Review of IS 1893:2016 Part I , IS 13920:2015 Performance of RC buildings, behavior of RC buildings in past earthquakes, influence of unsymmetry, infill walls, foundations, soft story, confinement of concrete, and ductility.

[07 Hrs.]

**UNIT - II**

Capacity Design of RC Members, Design for Strong column & weak beam, Design of Beam-Column Joints.

[06 Hrs.]

**UNIT - III**

Shear wall with ductile detailing. Preliminary sizing and Modeling of RC Buildings, Ductility and factors affecting ductility of RC members.

[06 Hrs.]

**Steel Structures**

**UNIT - IV**

Performance of steel structures in past earthquakes, basics of Steel Design, introduction to plastic analysis and design, design philosophy for steel structures.

[06 Hrs.]

**UNIT - V**

Capacity design concept, Ductility of steel buildings, Seismic behavior of steel structures, Stability considerations.

[07 Hrs.]

**UNIT - VI**

Seismic Design and detailing of Moment Resistant Frames, Beams and Columns.

[07 Hrs.]

**[09 Hrs.]**

**UNIT-II: LARGE SPAN STRUCTURES IN INDUSTRIES**

Cable roofs - Types of cable roofs - Analysis of a cable subjected to concentrated loads and uniformly distributed load, Complexities in the analysis of a cable roof, Overview of deep beams, Virrendel Girder, Castellated Girders - Introduction to earthquake forces.

**[10 Hrs.]**

**UNIT-III: SILOS AND BUNKERS**

Concept of Angle of Repose - Pressure distribution - Dynamic loads - Stability of bunkers – Foundations.

**[10 Hrs.]**

**UNIT-IV: FOUNDATIONS FOR INDUSTRIAL STRUCTURES**

Machine foundations - General requirements - Design criteria - General analysis - Design of a block foundation for vertical compressor - Vibration Isolation - Foundations for Chimney and Microwave Towers.

**Text books:**

1. Srinivasula P. Hand Book of Machine Foundation Tata McGraw Hill Publications, New Delhi. First Edition, 2000
2. Ramchandra Design of Steel Structures Standard Book House, New Delhi Seventh Edition, 2000
3. Raghupati M. Design of Steel Structures Tata McGraw Hill Publication, Delhi First Edition, 2003
4. Dayaratnam P. Design of Steel Structures Wheelr's Publishers, Allahabad 1995
5. AnandArya&Ajmani J. L. Design of Steel Structures Nemchand& Bros., Roorkee, U.P., IndiaForth Edition, 2004
6. Lambert F.W. The Theory & Practical Design of Bunkers The British Constructional Steelwork Association Ltd., London, UK2000

		June 2018	1.00	Applicable for Sem 1 & 2 AY2018-19 & Sem 3 & 4 AY 2019-20 Onwards
Chairperson	Dean (Acad. Matters)	Date of Release	Version	

Nagar Yuwak Shikshan Sanstha's  
**Yeshwantrao Chavan College of Engineering**  
(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)  
**M. Tech. SoE & Syllabi 2018-19 - Structural Engineering**

III Semester

CV2939	Project Phase I			L=0	T=0	P=12	CREDITS = 6
<b>EVALUATION SCHEME</b>							
MSE – I	MSE – II	CA	ESE	TOTAL		ESE DURATION	
		100		100			

COURSE OBJECTIVE			COURSE OUTCOMES		
1.	To provide the students the academic environment to carry out literature survey of advanced topics in structural engineering		1.	An ability to understand the advances in structural engineering.	
2.	To motivate the students to use the modern tools and software.		2.	An ability to understand the use of modern tools.	
3.	To provide the students the understanding of various aspects like effective communication skills, working independently and in a team and the importance of lifelong learning etc. to carry out project.		3.	An ability to work independently and in a team for effective communication	
			4.	An ability to understand the importance of lifelong learning.	

**Contents:**

1. Literature review on current topic related to the structural engineering.
2. Preparation and presentation of progress seminars on topic selected for dissertation.
3. Submission of project report including introduction, literature review, objective and scope of investigation and pilot studies carried out during the semester.

		June 2018	1.00	Applicable for Sem 1 & 2 AY2018-19 & Sem 3 & 4 AY 2019-20 Onwards

**Contents:**

- The of detailed study of a work including collection and analysis of data, determining solution, design, scientific research on topic selected for dissertation.
- Preparation and presentation of progress seminars on topic selected for dissertation.
- Submission of project report on the entire studies carried out during the semester
