SoE No. ME-202.1

III Semester GE2201 - Engineering Mathematics III

	Objectives	Outcomes
1.	Able to find numerical solution of various mathematical equations	The student will be able to: 1. Estimate the Calculus of Numerical Function.
2.	Give knowledge of Laplace transform, Z transform, Fourier transform	2. Determine transforms and inverse transforms of various functions of variables and use it to solve Mathematical
3.	Define the periodic functions in the form of Fourier series	equations. 3. Discuss the nature of periodic function and express it in terms
4.	Solve partial differential equations	of series. 4. Use appropriate method/s to solve partial differential equations.

Unit I: Finite Differences

Difference table; Operators E and Δ , Central differences, Factorials notation, Numerical differentiation and integration, Difference equations with constant coefficients. (6 hours)

Unit II: Laplace Transform

Laplace Transforms: Laplace transforms and their simple properties, Unit step function, inverse of Laplace transform, convolution theorem, Applications of Laplace transform to solve ordinary differential equations .(7 hours)

Unit III: Z-transform

Z-Transform definition and properties (with proof), inversion by partial fraction decomposition and residue theorem, Applications of Z-transform to solve difference equations with constant co-efficient. (6 hours)

Unit IV: Fourier Series

Periodic Functions and their Fourier series expansion, Fourier Series for even and odd function, Change of interval, half range expansions (7 hours)

Unit V: Partial Differential Equation

Partial Differential Equations of first order first degree i.e. Lagrange's form, linear homogeneous equations of higher order with constant coefficient. Application of variable separable method to solve first and second order partial differential equations.

(7 hours) Unit VI : Fourier Transform : Definition: Fourier Integral Theorem, Fourier sine and cosine integrals, Finite Fourier sine & cosine Transform Parseval's Identity, convolution Theorem. (6 hours)

MECHANICAL EGNINEERING

III Semester ME2201 - Material Science and Metallurgy

	Objective		Course Outcome
1.	To impart Knowledge for analysing different Microstructure and Crystalline nature of metals.	1.	Student will be able to distinguish microstructure and analyse the effect of Crystalline nature of metals
2.	To impart knowledge of Iron-Iron carbide equilibrium diagram and microstructure, general properties and heat treatment practices of commercial steels and Cast Iron.	2.	Student will be able to construct Iron-Iron carbide equilibrium diagram and analyse microstructure, general properties and heat treatment practices of commercial steels and Cast Iron.
3.	To impart knowledge of various heat treatment processes.	3.	Student will be able to analyse and implement suitable heat treatment processes
4.	To impart basic knowledge of powder Metallurgy for Powder metallurgical components	4.	Student will be able to perceive the basics of powder Metallurgy for powder metallurgical components.

UNIT-1:[5 hrs]

Introduction to materials, classification of materials. Properties and applications of materials. Crystalline nature of metals, specially microscopic and macroscopic examinations of metals. Alloys and solid solutions, types and their formations, modified Gibbs's phase rule, Lever rule for phase mixtures and their application in system. **[CO1]**

<u>UNIT-2:[</u>8 hrs]

Study of equilibrium diagrams and invariant reactions. Iron-Iron carbide equilibrium diagram, critical temperatures. Microstructure of slowly cooled steels. Estimation of carbon from microstructures; structure property relationship. Classification and applications of steels. Effect of alloying elements. **[CO 1,2]**

<u>UNIT-3:[</u>8 hrs]

Classification and application of plain carbon steels. Examples of alloy steel such as Hadfield Manganese Steel, ball Bearing Steels, etc. Tool Steels – Classification, composition, application and commercial heat treatment practice for HSS, Secondary hardening. Stainless Steels - Classification, composition, application, application and general heat treatment practice for Stainless Steels. **[CO 1,2,3]**

<u>UNIT-4:[</u>8 hrs]

Heat treatment and its importance. Annealing, Normalizing, Hardening, Quench Cracks, Hardenability test. TTT diagram and its construction and related Heat Treatment Processes such as Austempering, Martempering, Patenting etc.

Retention of Austenite, Effects and elimination of retained austenite, Tempering.Case / Surface hardening treatments such as Carburising, Nitriding, Cyaniding, Carbonitriding, Flame and Induction hardening. **[CO 1,2,3]**

MECHANICAL EGNINEERING

III Semester ME2201 - Material Science and Metallurgy

<u>UNIT-5:[</u>8 hrs]

Cast Iron – Classification, White cast Iron, Gray Cast Iron, Nodular Cast Iron, Malleable Cast Iron, Chilled and alloy Cast Iron. (Production route, Composition, Microstructure and applications) Effects of various parameters on structure and properties of Cast Iron, Alloy cast Iron such as Ni-resist, Ni-hard. Non-Ferrous Alloys – Study of non-ferrous alloys such as brasses (Cu-Zn diagram), Bronzes (Cu-Sn diagram), Aluminum Alloys (e.g. Al-Si & Al-Cu diagram), Bearing materials. **[CO 1,2,3]**

<u>UNIT-6:</u>[8 hrs]

Powder Metallurgy: Powder manufacture and Conditioning, Production of Sintered Structural Components, Self lubricating bearing, Cemented Carbides, Ceramics, Sintered Carbide cutting tools. **[CO 1,2]**

MECHANICAL EGNINEERING

III Semester ME2202 - Lab. : Material Science and Metallurgy

Objective	Course Outcome
 To provide general information of material science and metallurgy to the engineering students. The student is 	(1)Students will be able to create specimen for metallographic examination.
required to understand important relationship between structure of metals and its properties.	 (2))Students will be able to analyze the microstructure and investigate various properties of ferrous and non-ferrous Materials (3) Students will be able to test different Engineering Materials

List of Practical

A set of 10 Experiments from following list to be performed.

A set of 10 Experiments from following list to be performed.

- 1) Study of Metallurgical Microscope. [CO 1,2]
- 2) Preparation of Specimen for metallographic examinations. [CO 1,2]
- 3) Study and drawing of microstructures of Steels. [CO 1,2]
- 4) Study and drawing of microstructures of Cast Iron.. [CO 1,2]
- 5) Study and drawing of microstructures of Non Ferrous Metals.. [CO 1,2]
- 6) Study of the effect of annealing and normalizing on properties of steels. [CO 1,2,3]
- 7) Determination of hardenability of steels by Jominy End Quench test.. [CO 1,2,3]
- 8) Tensile test on Mild Steel and Aluminum test specimen.. [CO 1,2,3]
- 9) Measurement of hardness of ferrous and non-ferrous materials with the help of Brinell hardness tester. [CO 1,2,3]
- 10) Measurement of hardness of ferrous and non-ferrous materials with the help of Vicker hardness tester. **ICO**

1,2,3]

11) Measurement of hardness of ferrous and non-ferrous materials with the help of Rockwell hardness tester.

[CO]

1,2,3]

- 12) Study the heat treatment of high speed steels. . [CO 1,2,3]
- 13) Study the heat treatment of stainless steel.. [CO 1,2,3]
- 14) Study of effect of alloying elements on properties of steels. [CO 1,2,3]
- 15) Study of macroscopic examinations. . [CO 1,2,3]
- 16) Study of mechanisms of quenching. . [CO 1,2,3]
- 17) Study of Pack carburizing of steel samples. . [CO 1,2,3]

MECHANICAL EGNINEERING

III Semester ME2203 - Machining Processes

	Objective	Course Outcome
1.	To understand the basic tool geometry of cutting tool and basic machining parameters.	After completion of this course, Students will be able to 1. Distinguish among various cutting tool
2.	To analyse the various machining processes.	materials and tool geometries.
3. 4.	To identify and explain basic components and function of different machine tools. To understand the application and limitations of	 Examine the different processes and machine tools for cylindrical surface machining.
	various machining processes with regard to shape formation and surface quality.	 Differentiate various machining processes and conditions for flat surface machining using SPCT.
		 Justify machining processes for flat surfaces marching using MPCT.

Unit I

Mechanics of Machining And Machinability: Introduction to machining, geometry of SPCT. Mechanism of chip formation, Orthogonal and Oblique cutting, Use of chip breaker in machining, Merchant Circle (Analytical treatment expected), thermal aspects of machining, cutting temperature measurement during machining, Cutting Fluids, Machinability, Estimation of Tool life, Tool materials. [CO 1]

Unit II

Lathe: Kinematic systems and operations of lathes, attachments for various operations, machine specifications, basis for selection of cutting speed, feed and depth of cut, time estimation for turning operations such as facing, step turning, taper turning, threading, knurling. Capstan and Turret Lathe and special purpose Machines: Construction, Operation and selection of Machining Parameters, Machining Centers, Tool Heads and indexers. [CO 2]

Unit III

- Shaper: Introduction, type, specification, description of machines, hydraulic drives in shapers, cutting parameters, attachments for shaper, work holding devices, shaper operations.
- Planer: Introduction, specifications, description, type of planner, Mechanism for planner: Driving mechanism, feeding mechanism, planner cutting tools, cutting parameters
- Slotter: Introduction, specifications, description, type of drives for slotter, types of slotting. [CO I,3]

Unit IV

Milling: Kinematic systems and operations of milling machines, attachments for Milling. Cutting parameters, Types of milling cutters, Tool geometry & their specifications. Indexing- simple, compound and differential. Screw threads and Gear Manufacturing Methods.. [CO 1,4]

Unit V

Grinding operations, grinding wheel, specifications & selection, cylindrical ¢re less grinding operation, surface grinding, tool & cutter grinding, time estimation for grinding operations.

Super finishing process: Honing, Lapping, super finishing, polishing, buffing, metal spraying, galvanizing and electroplating. Process parameters and attainable grades of surface finish, surface roughness measurement. [CO 1,4]

MECHANICAL EGNINEERING

III Semester ME2203 - Machining Processes

Unit VI

Drilling: Introduction, tools for drilling, classification of drills, twist drills, drill size and specifications, carbide tipped drills, type of drilling machines, Drilling machines operations, time estimation for drilling.

Reaming: Introduction, description of reamers, type of reaming operations.

Ŀ;

Boring: Introduction, types of boring machine, horizontal boring machine, vertical boring machine, jig boring machine, micro boring, boring operations.

Broaching: Introduction, type of broaches, and nomenclature of broaches, type of broaching machines. [CO I1,4]

III Semester ME2204 - Lab. : Machining Processes

Objective	Course Outcome
 Understand the basic tool geometry of cutting tool and Identify basic components and function of different machine tools. 	 fter completion of this course, Students will be able to 1. Distinguish among various cutting tool materials and tool geometries.
 Understand the application and limitations of various machining processes with regard to shape formation and surface quality. 	 Examine the different processes and machine tools for cylindrical surface machining.
	 Differentiate various machining processes and conditions for flat surface machining using SPCT.
	4. Justify machining processes for flat surfaces marching using MPCT.

LIST OF PRACTICALS:

S No	Name of Experiment	
1	Demonstration of single point cutting tools, their nomenclature, geometry materials and applications.	
	CO 1	
2	Demonstration of multi point cutting tools, their nomenclature, geometry materials and applications. CO	
	1	
3	Demonstration of working of Lathe Machine and study of its mechanism. CO 2	
4	Demonstration of working of Shaper Machine and study of its mechanism CO 3	
5	Demonstration of working of Milling machine and study of its mechanism. CO 4	
6	Demonstration of working of Drilling machine and study of its mechanism. CO 4	
7	Practical on lathe for turning , facing , step turning , taper turning and threading. CO 2	
8	Practical on Shaper with exposure to auto feed. CO 3	
9	Practical on milling machine for slot cutting. CO 4	
10	Practical on Drilling machine for drilling. CO 4	
11	Demonstration of boring operations. CO 2	
12	Study of Grinding machine and super finishing processes. CO 4	
13	Introduction to NC and CNC machines. CO 4

MECHANICAL EGNINEERING

III Semester ME2205 - Mechanics of Material

	Objective	Course Outcome
1)	The student should be able to acquire elementary knowledge of stress, strains and material properties.	After completion of this course, Students will be able to 1) Describe the basic concepts of stress, strain and
2)	To impart the knowledge on shear force and bending moment calculations for beams.	their variations under different types of loading
3)	To impart the knowledge about bending and shear stress and its importance.	 Apply the basic concepts involved in mechanics of materials, bending moment, shear
4)	To impart basic knowledge on strain energy calculations due to various types of loads and to estimate the load carrying capacity of columns.	force, stresses in beams to solve complex problems
5)	To impart basic knowledge to calculate deflection of beams.	3) Analyze strain, impact loading and crippling load
6)	To impart knowledge on the principal stresses and planes in three dimensional stress systems.	 Evaluate the torsional shear stress in shaft and solve the problem on Slope and deflection in beams under different loading and support conditions.

Unit 1

Concept of simple stresses and strains: Introduction, Stress, strain, types of stresses, stress - strain diagram for brittle & ductile material, elastic limit, Hooks law, modulus of elasticity, modulus of rigidity, factor of safety, analysis of tapered rod, analysis of composite section, thermal stress and strain, thermal stresses with heat flow in cylinders and plates, Hertz's contact stresses. Longitudinal strain & stress, lateral stresses and strains, Poisson's ratio, volumetric stresses and strain with uni-axial, bi-axial & tri-axial loading, bulk modulus, relation between Young's modulus and modulus of rigidity, Poisson's ratio and bulk modulus. [CO-1]

Unit 2

Shear force and bending moments in Beam: Types of beam (cantilever beam, simply supported beam, overhung beam etc.), Types of loads (Concentrated and UDL), shear force and bending moment diagrams for different types of beams subjected to different types of loads, sign conventions for bending moment and shear force, shear force and bending moment diagrams for beams subjected to couple, Relation between load, shear force and bending moment. [CO-2]

Unit 3

Stresses in beams: Pure bending, theory of simple bending with assumptions & expressions for bending stress, derivation of bending equation, bending stresses in symmetrical sections, section modulus for various shapes of beam sections.

Shear stresses in beams: - Concept, derivation of shear stress distribution formula, shear stress distribution diagram for common symmetrical sections, maximum and average shear stress. [CO-2]

Unit 4

[7 hrs] Strain energy and impact: Concept of strain energy, derivation and use of expressions for deformation of axially loaded members under gradual sudden and impact loads. Strain energy stored in bending & torsion. Castingliano's theorem.

III Semester ME2205 - Mechanics of Material

Column & Struts: Failure of long & short column, slenderness ratio, Euler's column theory, End conditions for column. Expression for crippling load for various end conditions of column. Effective length of column, limitations of Euler's formula, Rankine formula, Johnson's parabolic formula. [CO-3]

Unit 5

[8 hrs] Torsion of circular shafts: Derivation of torsion equation. Torsional shear stress induced in the shaft, when it is subjected to torque. Torque transmitted by solid & hollow circular shaft. Derivation of maximum, minimum principal stresses and maximum shear stress induced in shaft when it is subjected to bending moment, torgue & axial load. Deflection of beams: Derivation of differential equation of elastic curve. Deflection & slope of cantilever, simply supported, overhung beams subjected to concentrated loads, UDL, Relation between slope, deflection & radius curvature McCauley's method, area moment method to determine deflection of beam. [CO-4]

Unit 6

Combined Stresses: Definition of principal planes & principal stresses, analytical method of determining stresses on obligue section when member is subjected to direct stresses in one plane in mutually perpendicular two planes, when member is subjected to shear stress and direct stresses in two mutually perpendicular planes, Mohr's circle for representation of stresses. Derivation of maximum and minimum principal stresses & maximum shear stresses when the member is subjected to different types of stresses simultaneously (i.e. combined stress) [CO-1]

MECHANICAL EGNINEERING

III Semester ME2207 - Kinematics of Machinery

• To provide a study of understanding the concept of	
 kinematics in Mechanisms and machines to students of mechanical engineering though the theoretical principles involved have immediate application to practical problems To provides the foundation for the study of displacements, velocities, accelerations and static and dynamic forces. Required for the proper design of mechanical linkages, cams and geared systems. 	 Students should be able to understand the mechanical system, mechanism its components, relative between them. Students should be able to determine the relative velocity & Acceleration of a kinematic link of a given mechanism and various forces coming on links in static condition. Students should be able to identify the motion as per the application & draw the profile of a cam followers mechanism.
	 Students should be able to understand various types of Gears used in Machine terminologies and concepts of velocity ratios in gear trains.

<u>Unit 1</u>

Basic concept of mechanism, link, kinematics pairs, kinematics chain, mechanism, machine, simple & compound chain, Degree of freedom, estimation of degree of freedom of mechanism by Grubber's criterion and other methods. Harding's notations, classification of four bar chain [class-I & Class-II], inversion of four-bar-chain, Kutchbach theory of multiple drives,

<u>Unit 2</u>

Quantitative kinematics analysis of mechanism: - Displacement, Velocity and Acceleration analysis of planer mechanism by graphical method as well as analytical method [complex number method/matrix method], Instantaneous center method, Kennedy's theorem. **[CO 2]**

<u>Unit 3</u>

Concepts of cam mechanism, comparison of cam mechanism with linkages. Types of cams and followers and applications. Synthesis of cam for different types of follower motion like constant velocity, parabolic, SHM, cycloid etc. Analysis of follower motion for cams with specified contours like eccentric cam, tangent cam and circular arc cam with concave and convex curvature. Pressure angle in cam, parameters affecting cam performance. **[CO 3]**

<u>Unit 4</u>

Concept of motion transmission by toothed wheels, comparison with cams and linkages, various tooth profiles, their advantages and limitations, gear tooth terminologies, concept of conjugate action, law of conjugate action, kinematics of in volute gear tooth pairs during the contact duration, highlighting locus of the point of contact, arc of contact, numbers of pairs of teeth in contact, path of approach and path of recess, interference, undercutting for in volute profile teeth. **[CO 4]**

<u>Unit 5</u>

Kinematics of helical, bevel, spiral, worm gears, rack and pinion gears, kinematics analysis, and torque analysis of simple epicyclical and double epicyclical gear trains. **[CO 4]**

<u>Unit 6</u>

Static force analysis: Free body diagram, condition of equilibrium. Analysis of all links of given linkage, cam, gear mechanism and their combinations without friction. **[CO 2]**

	EVALUATE HEAD LOSSES, DISCHARGE,		
	POWER LOST ETC FOR THE FLOW THROUGH		
	PIPES WITH AND WITHOUT FITTINGS		
	[PO: 1,3,5,12,13]		

<u>Unit1</u>

Introduction to Fluid Mechanics: Definition of Fluid, Properties of fluids, Newton's law of viscosity, Pascal's law, Basic equation of fluid static, Pressure variations in compressible & incompressible fluids, Fluid pressure & its measurement (Manometers & Bourdon's pressure gauge), Hydrostatics: Forces on submerged plane surfaces [CO:1]

<u>Unit2</u>

Kinematics Of Fluid Flow: Types of flow, Stream line, Path line, Streak line, Stream tube, Continuity equation, One and Two dimensional flow, Velocity and Acceleration at a point, Circulation and Vorticity, Stream function and Velocity potential. [CO:2]

<u>Unit3</u>

Dynamics Of Fluid Flow: Integral Momentum Equation, One-dimensional method for flow analysis, Impact of jet on stationary and moving Flat and curved vanes, Theory of Rotodynamic machines. **[CO:3]**

<u>Unit4</u>

Derivation of Bernoulli's equation for incompressible flow & its applications for various ideal and practical systems, Venturimeter, Orifice Meter and Pitot tube [CO:3]

IV Semester GE2204 - Advanced Mathematical Techniques

Objective	Outcomes
	Students will be able to
To introduce various Numerical Methods to solve	Utilize numerical techniques to obtain approximate
algebraic and differential equations	solutions of mathematical equations
To understand the concept of Probability distribution	Measure the Statistical parameters for random variables
To introduce the concept of Fuzzy Set theory and	Explain the basic concept of fuzzy sets, Relations and
functions	fuzzy logic.
To make aware of different optimization techniques	Design and determine the solution of linear programming
	problems

Unit I:

Numerical Methods for Algebraic And Transcendental Equations: Errors in numerical calculation, Errors in
series approximation, Rounding of error solutions of algebraic and transcendental equations, Iteration method,
Bisection method, False position method, Newton Raphson method and their convergence
Numerical Methods System of Algebraic Equations: Solution of System of linear equations, Gauss- Seidel
method, Crouts method.(7 hours)

Unit II:

Numerical Methods for Differential Equations: Numerical solution of ordinary differential equation by Taylor's series method, Picard's method, Runge's second and third order method, Runge-Kutta 4th order method, Euler's method, Euler's modified method, Milne's Predictor and Corrector method. (6 hours)

Unit III:

Random Variables and Probability Distribution: Discrete and continuous random variables, probability density function of one and two variables, Probability distribution function of one and two variables, Joint distributions and conditional distributions. (6 hours)

UNIT IV:

Mathematical Expectation: Definition of mathematical expectation, functions of one and two random variables,The variance and standard deviations, moment generating function other measures of central tendency and
dispersion, Skewness and Kurtosis.(7 hours)

UNIT V:

Fuzzy Sets And Fuzzy Logic: Fuzzy sets and systems, crisp sets, overview of fuzzy logic and classical logic, fuzzy compliment, fuzzy union, fuzzy intersection and combinations of these fuzzy sets operations crisp and fuzzy relations. (7 hours)

Unit VI:

OPTIMIZATION TECHNIQUES: Definition of basic concepts of LPP, Formulation of LPP and its Solution by graphical, simplex methods and Big M method. (6 hours)

IV Semester ME2251 - Design of Machine Elements

Objective	Course Outcome	
This subject occupies a predominant position in the curriculum of Mechanical Engineering. It consists of application of scientific principles, technical information & creative thinking for the development of a new or improved machine or mechanical system, to perform desired function with maximum efficiency.	 Student will be able to Apply the knowledge of design principal in machine components. Design and analyze various joints i.e., Welded joints, Bolted joints and Riveted joints. Learn the design principals of power screw, springs, clutches and brakes. Apply principal of design of pressure vessel and power transmission shafts. 	

Unit1

[8 hrs] Definition of design, types of design, design process, need, defining the problem, feasibility, design alternatives, final design selection, preliminary and final plant drawings.

Theories of failure. Design for Fatigue & manufacturing considerations in design, basis of good design, failure of machine parts, Mechanical properties, Design considerations and selection of materials. [CO – 1]

Unit2

Design of Joints:

Welded joint: design of single transverse, double transverse, parallel fillet, combination fillet butt joint, Eccentrically loaded welded joints.

Bolted joint: Design of bolted fasteners, bol	It of uniform strength,	bolted joints under	eccentric loading.
Design of riveted joints.			[CO – 2

Unit3 [7 hrs] Power screw and Leaf spring: Design of power screw [CO – 3]

Design of Helical and Leaf Springs.

Unit4

[7 hrs] Brakes and clutches: Kinematics of Friction Drives such as Brakes, Clutches Design of Friction Clutch, Single Plate, Multiple Plate, Cone, Centrifugal Clutch, Design of Brake, Shoe Brake, Band Brake, Internal Expanding brake. [CO – 3]

Unit5

[7 hrs]

Pressure Vessel: Classification of Thick and Thin Cylindrical Pressure Vessel, Stresses in Thin and Thick Cylindrical Pressure Vessels when it is subjected to internal pressure, Expression for Circumferential and Longitudinal stresses, Design of pressure vessel, Heads and Cover Plate. [CO – 4]

Unit 6

[8 hrs] Design of Shafts: Design of transmission Shafts on the Basis of Strength and rigidity, ASME Code for shaft Design, Design of Stepped shaft Axle splined Shaft, Keys. [CO - 4]

MECHANICAL EGNINEERING

IV Semester ME2252 - Engineering Thermodynamics

Objective	Course Outcome		
To develop the			
understanding of thermodynamic principles/laws for ideal gas/pure substance and to use it for evaluation of the energy interaction with the thermodynamic systems undergoing	 On completion of this course, the student will be able to: Applythe First and zeroth law of thermodynamics for the analysis of thermodynamic systems to evaluate energy interactionin various processes. 		
process.	 b. (Programme Outcome: PO-1, PO-3, PO-5, PO-12, PO-13) 3) Evaluate various thermodynamic parameters in various processes with phase changeusing phase change diagrams, relations and steam tables/ chartsapplying Law of thermodynamics. a. (Evaluating, Analyzing, Applying) b. (Programme Outcome: PO-1, PO-3, PO-5, PO-12, PO-13) 4) Analyze the performance of various Thermodynamic cycles applying Law of thermodynamics for evaluation of energy interaction. a. (Evaluating, Analyzing, Applying) b. (Programme Outcome: PO-1, PO-3, PO-5, PO-12, PO-13) 		

UNIT I:

Introduction To Thermodynamics:

Basic concepts of Thermodynamics, Continuum and macroscopic approach; thermodynamic system, Concept of energy and various forms of energy; internal energy, enthalpy; specific heats;, thermodynamic properties and equilibrium; state of a system, state postulate, state diagrams, paths / processes and cycles on state diagrams. The Ideal Gas equation of state. The concepts of heat and work interactions. Evaluation of different modes of work. Zeroth Law of Thermodynamics, concept of temperature [CO 1]

UNIT II

First Law of Thermodynamicsapplied to the various processes in Closed Systems, Various Steady flow systems, Steady-Flow Engineering Devices and Unsteady Flow process such as: charging and discharging of gas cylinder. [CO 1]

(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)

B. Tech SoE and Syllabus 2020

MECHANICAL EGNINEERING

IV Semester ME2252 - Engineering Thermodynamics

UNIT III

Second Law of Thermodynamics :

Limitations of the Zeroth and First law of thermodynamics,

concepts of Thermal energy reservoirs, heat engines and heat pumps/refrigerators,

Kelvin-Planck and Clausius statements and their equivalence; reversible and irreversible processes; Carnot cycle and Carnot principles/theorems; thermodynamic temperature scale; [CO 2]

UNIT IV

Entropy:

Clausius inequality and concept of entropy; microscopic interpretation of entropy, the principle of increase of entropy, T-s diagrams, Change in entropy for processes in Closed and Steady flow systems. Introduction to concept of Availability. [CO 2]

UNIT V

Properties of Pure Substances (Steam) :

Thermodynamic properties of pure substances in solid, liquid and vapor phases; P-v-T behavior of simple compressible substances, phase rule, thermodynamic property tables (Steam Tables) and charts. Calculations of work and heat interactions in non- flow and steady flow processes. Determination of dryness fraction using various calorimeters. [CO 3]

UNIT VI:

Thermodynamic Cycles

Vapor Power Cycles: Carnot vapor cycle, Rankine cycle: ideal and the reheat, the analysis of vapor power cycle.

Air-standard cycles:air standard assumptions,basic considerations and the analysis of power cycles: Otto cycle, Diesel engine cycle, and Brayton cycle.

Refrigeration Cycle: Introduction to Vapor-compression Refrigeration Cycle [CO 4]

IV Semester ME2253 - Lab : Machine Drawing

Objective	Course Outcome
To familiarize the students with-	The student will able to
1) To gain knowledge of different types of line and its application, conventional representation of various	1) Apply standards practices and conventions in machine drawing.
machining and mechanical details as per IS	2) Draw a Orthographic and Isometric drawing
2) To visualize an object and convert it into a drawing.	 Preparing and visualizing detailed drawing of various machine components.
3) To become conversant with 2D and 3D.	4) Create a 2D and 3D using CAD software with due manufacturing consideration.

<u>Unit1</u>

Drawing Standards for following- Drawing Sheets, Name Blocks, Lines, Dimensioning of Tolerances, Standard features, Machining Symbols, Welding Symbols, Heat Treatment, manufacturing Instructions, Allowances, and Materials. [CO 1]

<u>Unit2</u>

Orthographic Projection of Elements, section, dimensioning, Dimensioning of tolerances, Orthographic Projections, Sectional Views, Missing Views, conventional representation of machine elements. [CO 2]

<u>Unit3</u>

Preparation of drawing of machine Elements such as - threads, Bolts, Nuts, Washers, Rivets, Welds, Keys and Keyways, splines, Couplings, shaft. [CO 1,2]

<u>Unit4</u>

Assembly and Dismantling Principles : Fits and Tolerances (Standards, Types Application and Selection), Tolerance Charting, Surfaces Finishing Requirement for Assembly, Geometry suitable for Assembly, Assembly / Dismantling Tools, Bearing Assemblies, Assemblies by Fastening. [CO 3]

<u>Unit5</u>

Study of some Standard Assemblies.

Assembly Drawings: Principles, Techniques and standards for Preparing Component Drawings, Subassembly Drawing, Full Assembly Drawing, Exploded Views.

Assembly drawings of :- Lathe machine tail stock and tool post , radial engine sub assembly, plummer block, steam stop valve or safety valve, etc. [CO 3,4]

<u>Unit 6</u>

Production Drawing : Name Plates, Part List, Revisions Etc., Essential Parts/ Formats Required for Production Drawings, Process Sheet, blue print reading. [CO 4]

IV Semester ME2254 - Manufacturing Processes-II

Objective	Course Outcome
Subject is the essential framework of manufacturing processes and is composed of the scientific and practical inter relationship among the processing, structure, properties and performance of all conventional methods of manufacturing techniques	 After completion of this course, 1) The student will be able to illustrate the basics of moulding process and compare various casting processes 2) The student will be able to analyze various Forming and sheet metal working processes. 3) The student will be able to Elaborate and classify different welding processes. 4) The student will be able to discuss and analyze unconventional machining processes.

Unit 1

Casting Process: Introduction, Pattern making: Types, materials used, Pattern making allowances, color codes. Core making: - Types, core material & its properties. Molding: Types of sand moulds, molding sand composition, molding sand properties, molding machines. Gating design - Elements of gating systems, pouring time, riser design Choke area (Analytical treatment). [CO-1]

Unit 2

hrs1

Foundry mechanism: Special casting processes such as investment Casting, Centrifugal Casting, Shell Molding, CO Molding, Slush Casting, Die Casting, Cleaning, inspection & casting defects. [CO-1]

Unit 3

hrs]

Mechanics of forming processes (including analytical treatment). Rolling (Determination of variables in Rolling), Forging (Hammer/Press), Extrusion & Wire Drawing, Melting furnaces - Types, Electric furnace, Induction furnace, Cupola-construction & operation. [CO-2]

Unit 4

hrs1

Sheet metal working:- Introduction, Terminology, Types of Presses and operations, Classification of dies, Introduction to design parameters, Analytical treatment-Blanking dies (calculation of cutting force), Bending dies (calculation of blank length, bending force), Drawing dies (design of blank size, calculation of drawing force, blank holder force) [CO-2]

Unit 5

[9 hrs] Joining processes: Introduction to Welding, Soldering, Brazing Processes. Types of Welding, Arc Welding & Gas Welding Processes, Defects & Inspection of Welding Joints, Electrodes, Weldability of Metals, Welding equipments of Fixtures. Advance Welding Methods: Introduction to TIG, MIG, spot welding, Plasma Arc welding, Electron Beam, and Electron Laser Beam welding. [CO-3]

IV Semester ME2255 - Lab. : Manufacturing Processes-II

Objective	Course Outcome
Practical is the essential framework of manufacturing processes and is composed of the scientific and practical inter relationship among the processing, structure, properties and performance of all conventional methods of manufacturing techniques.	 (1) The student will be able to illustrate the basics of moulding practices and various casting process. (2) The student will be able to illustrate CUPOLA and other furnaces. (3) The student will be able to Elaborate and classify different welding processes. (4) The student will be able to discuss various SMW processes

List of Practical:-

A set of 10 Experiments from following list to be performed.

- Preamble about Foundry practices used in industries.[CO 1]
- Preparation of mould sand. [CO 1]
- Study of Various moulding processes. [CO 1]
- Study of various types of melting furnaces and cupola in detail. [CO 2]
- Study of different types of wooden pattern[CO 1]
- Grain fineness test of moulding sand. [CO 1]
- Demonstration of mould making along with Study of foundry tools. [CO 1]
- Preparation of mould making. [CO 1]
- Preparation of casting job along with Study of casting processes. [CO 1]
- Preparation of wooden pattern in pattern making shop. [CO 1]
- Job making involving various operations such as MIG ,TIG welding processes etc. [CO 3]
- Preparation of job on punching press. [CO 4]
- Report of foundry visit [CO 1]

A Visit: A visit to a foundry shop for more understanding of the casting practices. [CO 4]

IV Semester ME2256 - Mechanical Measurement and Metrology

Objective	Course Outcome
To make the student aware of various Fundamental principles applicable to instruments used for measuring	The Students will be able to –
various mechanical parameters. To expose the students about limits, fits, tolerances & implement them to achieve the goal of interchangeable	 (1) Demonstrate the basic knowledge of measuring instruments and evaluate various characteristics(Static & Dynamic)
manufacturing. To impart the fundament quality control concepts & their	(2) Select proper measuring instrument & use it for measuring various mechanical parameters.
implementation in manufacturing industry.	(3) Demonstrate the basic knowledge of limits, fits, tolerance & design of limit gauges, tolerance charts.
	(4) Various quality control concepts & implement them to control quality of manufacturing processes.

UNIT 1

Purpose, Structure, and elements of a general measurement system. Static characteristics of measurement system, measurement error, Type of inputs, methods of corrections. Dynamic characteristics of measurements system, Mathematical modeling, transfer function, order of system, Standard input signals. Response of Zero, First and second order instruments.(no analytical treatment) [CO 1]

UNIT 2

Standards of measurements, interchangeability, simple gauging instruments for linear and angular measurements, form measurement, surface finish measurement, comparators, measurement of straightness and flatness, measurement thread, interferometers, calibration of equipment, CMM. [CO 2]

UNIT 3

Tolerance analysis of limit and fits, Design of limit gauges(analytical treatment), types of fits, shaft basis system, hole basis system, selective assembly ,allowances, process planning sheet, preparation of tolerance chart (analytical treatment). [CO 3]

UNIT 4

Study of instruments for measurements of linear & angular displacement, speed, acceleration, force, torque, power and Strain.. [CO 2]

UNIT 5

Study of instruments for measurement of temperature, level, pressure and flow. [CO 2]

UNIT 6

Acceptance sampling techniques, O.C. Curve, sampling plans, (analytical treatment), inspection types and objective. Quality control and control charts. [CO 4]

GE2311 - FUNDAMENTALS OF MANAGEMENT

Objective	Outcomes Students will be able to
To introduce the fundamentals and legal provision of Management	Explain the Legal provision and Functions of Management.
To introduce the Human Resource and Financial practice of organization	Analyze the role of Human Resource and Financial Management in the organization.
To Introduce the Project Management	Analyze the project life cycles.
To provide knowledge of Marketing Activities of Management	Identify tools and techniques for the marketing of goods and services.

Unit – 1 - Principle of Management

Evolution of Management Thought : Scientific and Administrative Theory of Management , Definition and Concept of Management, Functions of Management : Planning, Organizing, Directing, Coordinating and Controlling, Motivational Theories, Concept of Leadership

UNIT-2: Legal Aspects of Management

The Indian Contract Act, 1872 – Formation of Valid Contract, Discharge of Contract, Quasi Contract, Indemnity and Guarantee. The Indian Partnership Act, 1932- Essentials of Partnership, The Companies Act – Nature and Definition of Company, Registration and Incorporation, Memorandum and Article of Association, Kinds of companies, Winding up of the Company

UNIT-3: Human Resource Management

Human Resource Management-Meaning and Scope, Principles of HRD, Job Analysis – Job Description and Job Specification, Job Enrichment, Job Rotation, Training and Development – Purpose and Methods, Performance Appraisal- Purpose, Procedure and Techniques, Grievance Redressal Procedure .

UNIT-4: Project Management

Concept, Classification and Characteristics of Project, Project Life Cycle, Project Proposal, Tools and Techniques of Project Management, Network techniques - Introduction and Use of CPM &PERT for planning, SWOT Analysis, Project Risk Analysis, Project Control.

UNIT-5: Marketing Management

Marketing Management - Definition & scope, Selling & Modern Concepts of Marketing, Market Research, Customer Behaviors, Product Launching, Sales Promotion, Pricing, Channels of Distribution, Advertising, Market Segmentation, Marketing Mix, Positioning, Targeting

MECHANICAL EGNINEERING

V Semester

ME2301 - HEAT TRANSFER

Unit No.	Contents	Max Hrs
1	Introduction: Modes of Heat Transfer, Basic Laws of Heat Transfer and Conservation of Energy requirement.	6
	Derivation of general Heat conduction equation in Cartesian, Cylindrical and Spherical Co-ordinates, Thermal conductivity and Thermal diffusivity.	
	One dimensional steady state conduction equation for the plane wall, Cylinder and Sphere, Thermal resistance of composite structures, Contact resistance, and overall heat transfer coefficient.	
2	Conduction with uniform internal heat generation : within plane wall, solid Cylinder and solid sphere,	5
	Extended Surfaces with uniform cross section area, temperature distribution and their heat transfer rate, Fin efficiency and effectiveness,	
3	Forced Convection:	5
	Physical signification of related non-dimensional parameters, Newton's law of cooling, Concept of velocity and thermal boundary layer, Local and average heat transfer coefficient, Using Empirical co-relation (from heat transfer data book) for heat transfer during external and internal flow in laminar and turbulent regime for UHF and UWT condition, for determination of heat transfer coefficient.	
4	Natural Convection:	5
	Grashoff number, Rayleigh number, Hydrodynamic and Thermal Boundary Layer. Using Empirical co-relation (from heat transfer data book) for heat transfer during external flow in laminar and turbulent regime for UHF and UWT condition (over plates & cylinders in Horizonal and vertical position, and over sphere). Heat transfer with phase change (Theory only): Pool boiling phenomenon, curve and regimes of pool boiling,	
	Film and drop wise condensation, Film wise condensation on vertical surface (plate & cylinder), horizontal tube & bank of tubes, effect of superheated and non-condensable gasses on condensation heat transfer.	
5	Heat Exchanger: Classification of heat exchangers, overall heat transfer coefficient, fouling factor, temperature distribution	6
	Heat Exchanger Analysis for parallel & Counter flow heat exchangers using LMTD Approach and Effectiveness -NTU approach	
6	Radiation Basic Radiation Concepts:	6
	Fundamentals, Basic ideas, spectrum, basic definitions, radiative properties of opaque surfaces, Spectral and directional variations, emissive power, radiosity, intensity of radiation and solid angle, Band Emission.	
	Black Body Radiation Laws: Planck's law, Stefan Boltzmann law, Wien's Displacement law, Kirchhoff's law, Lambert cosine law,	
	Radiation Energy Exchange: Concept of black and gray bodies, Radiation exchange between black surfaces, Radiation exchange between gray surfaces	
	Shape Factor Concepts- Definition, relations and its properties. Radiation network for radiative exchange.	
	Radiation between parallel plates, concentric Cylinders and concentric spheres & simple enclosures

ME2302 - LAB : HEAT TRANSFER

	Objective	Course Outcome		
Th	e student should be able to	On completion of this course, the student will	be	
5)	The contents of syllabus intend to understand basic principles and physical phenomenon of Thermal Energy transfer and to understand heat transfer applications and formulate the problem.	able to5) Analyze and solve the problems of unidirectional steady state heat conduction systems.		
6)	To apply experimental tools for analysis of heat transfer applications in engineering.	6) Investigate and apply the empirical correlations in convection and phase change processes to estim the heat transfer coefficient.		
7)	To receive results from experimental and the mathematical tools and interpret the results to provide solutions for improvement.	 Design & analyze the heat exchangers with LMTE)&	
8)	In all to generate interest in learning to develop intuitive understanding in Heat Transfer.[a,e,k,l,m]	8) Examine and evaluate the net thermal radiation exchange between surfaces and estimate radiatio view factors using tables, graphs and the view fac relationships.		

List of Practical

A set of 9 Experiments from following list to be performed.

List of Practical: Minimum eight experiments from the following:

1D steady state Conduction:

1) Determination of thermal conductivity of metal bar.

- 2) Determination of thermal conductivity of insulating material in the powder form (Lagged Pipe).
- 3) Determination of thermal conductance of a **composite wall**.
- 4) Heat Transfer through FINs.

Steady State convection:

5) Determination of forced convection heat transfer coefficient for fluid flow through a closed conduit.

6) Determination of natural convection heat transfer coefficient for a vertical surface.

Heat Exchanger:

7) Determination of **effectiveness and overall heat transfer coefficient** for parallel flow and counter flow concentric tube heat exchangers.

Steady State Radiation

- 8) Determination of **emissivity** of non black surfaces.
- 9) Determination of Stefan-Boltzmann constant.

Study:

1) Study of different methods of temperature measurements with special emphasis on thermocouples.

- 2) Study of heat pipes
- 3) Study of pool boiling phenomenon (Nukiyama Curve).
- 4) Study of condensation heat transfer in film wise & drop wise modes.

ME2303 - DYNAMICS OF MACHINERY

Objective Course Outcome		
To develop the concept of rigid body motion and impart knowledge of rigid body dynamics. To enables the students to analyze dynamic forces in mechanism. To introduce the concept of unbalanced forces need for balancing of various machines and the different ways to achieve balancing. To impart elementary knowledge of vibrations, its effect on machines .To prepares students for calculations of important parameters and vibration isolation	 On completion of this course, the student will be able to 1) Differentiate static and dynamic forces on different machines and mechanisms. 2) Analyze the unbalanced in rotating & reciprocating machines and corrections required to balance the same. 3) Identify the vibrations in different machines. 4) Evaluate and justify vibrations 	

Unit No.	Contents	Max. Hrs.
1	Introduction: D'Alembert principle, Dynamic force analysis of simple mechanism	8
	Gyroscope: simple precession and gyroscopic couple, gyroscopic effect on airplane, ship, vehicles and grinding mills.	
2	Governors – Classification, Watt, Portal, Proell, Hartnell governors etc,	7
	Fly wheel: Turning moment Vs crank angle diagram for single- cylinder and multiple-cylinder engines, punching machines etc. Flywheel selection.	
3	Balancing in rotating mechanism: Static & Dynamic balancing in rotating masses, balancing of multiple masses rotating in same plane, Balancing of several masses rotating in different planes, Dynamic balancing machine.	7
4	Balancing of reciprocating masses: Primary and secondary unbalanced forces of reciprocating masses. Partial balancing of unbalanced primary forces in a reciprocating engine. Balancing of primary and secondary force and couples in multiple inline engine, Balancing of radial engines (Direct and reverse crank method)	8
5	Vibration: Derivation of equation of motion for vibratory system. Free vibration of single-degree-of- freedom system with and without damping. Logarithmic decrement and damping estimation. Forced vibration of single-degree-of-freedom and vibration isolation, whirling of shaft and critical speed of rotors.	8
6	Torsional vibration: Lagranges equations and introduction to multi degree freedom systems. Equation of motion for two-degree-of-freedom system. Natural frequencies and mode shapes vibration absorber. Torsional oscillation of two-disc and three disc rotors	7

ME2305 - PRODUCTION MANAGEMENT

Objective	Course Outcome						
The course aims to develop an insight into working of production systems, their evaluation analysis and control. The overall objective is to learn to plan, design, execute or operate, control and measure the efficiency/ effectiveness of production systems.	Students will have						
	iv) Ability to estimate production costing and apply by judging production planning and control.						

Unit No.	Contents	Max. Hrs.
1	Work Study: Productivity, factors affecting productivity. Measurement of productivity. Work study and methods study: Definitions, objectives, steps in method study, Process charts, string diagram, motion study, micro motion study, SIMO Chart	7
2	Work measurement: Objectives, definition, stop watch study, work sampling, PMTs, MTM & Work factor method Value analysis and value Engineering:, Introduction, steps involved in value analysis. Applications in	8
	Manufacturing.	
3	Plant Layout: Types of Plant Layout, Layout Functions and problems, Organization, Automated material handling, Concepts of AGVs, AS/RS and other automated devices. Design of integrated plant layout for product handling system.	8
4	Forecasting: Need for forecasting, classification of forecasting methods, like judgmental technique, time series analysis, least square method, moving average method, exponential smoothing method.	7
5	Production planning and control: Definition, objectives of PPC, functions of PPC, types of production, Inventory control, EOQ, Techniques in inventory control and associated problems.	7
6	Process analysis and Cost Estimation: Steps involved in manual production planning, Selection of process, analysis. Aims of Cost Estimation, Difference between cost and Estimation, Elements of cost: material, Product cost, Analysis of overhead expenses, Product cost estimation.	8

OE-I: ME2334- CONTROL SYSTEMS ENGINEERING

Objective	Course Outcome
 To develop an ability to define transfer function. To analyze the performance of control system in time domain and frequency domain 	 Students will be able to : 1) Describe the mathematical representation of various control system components and determine the transfer function of mechanical, electrical, thermal and fluid system. 2) Analyse the construction and working of various control system components and electrical motors. 3) Evaluate the performance of control system using time response analysis and stability analysis. 4) Analyze the performance of control system on the basis of frequency response and design suitable compensation for the control system

Unit No.	Contents	Max. Hrs.
1	Introduction, System concept Open and Closed loop control systems. Transfer function, Mathematical Modeling of Physical System and system representation through Block Diagram. Transfer function through Block Diagram Simplification. Signal Flow Graph, Masons Gain Formula Block diagrams of various control systems.	7
2	Representation of Control components: Mechanical and Electrical components; Analogous systems; Thermal and Fluid systems.	7
3	 Electrical systems: - ac/dc servomotors; field controlled and armature controlled servomotors; positional servomechanisms; stepper motors. Hydraulic systems: - Hydraulic pumps (gear; vane; and reciprocating piston) Cylinders, Direction control valves (2, 3, 4 way) Flow control valve; Relief valve Hydraulic servomotor. 	8
4	Transient and steady state response of first and second order systems Concept of stability; relative stability; Routh stability criteria.	8
5	Frequency response and its characteristics; Bode plots; Nyquist plots. Gain margin and phase margin. Identification of system transfer function.	8
6	Basic control actions; Proportional Integral and Derivative control actions and their effect on system performance. Root locus technique. Introduction to control system design log load compensation Feed Back Compensation and Pole -Zero placements.	7

V Semester

OE-II : ME2341- TOTAL QUALITY MANAGEMENT

Objective	Course Outcome
	Students will be able to :
• The course aims to build an overall capability to understand Quality and its relevance in today's dynamic market.	 Develop an understanding on quality management philosophies and frameworks.
• Various Quality Improvement tools and technique shall be introduced and practiced so as to develop skills and knowledge to function as a good quality professional in the Engineering Profession.	 Develop in-depth knowledge on various tools and techniques of quality management.
	 To Evaluate the applications of quality tools and techniques in both manufacturing and service industry
	 Ability to use quality management methods analyzing and solving problems of organization.

Unit No.	Contents	Max. Hrs.
1	Principles of Quality Management, Pioneers of TQM, Quality costs, Quality system Customer Orientation, Benchmarking, Re-engineering	7
2	Leadership, Organizational Structure, Team Building, Information Systems and Documentation – Quality Auditing, ISO 9000 - QS 9000.QMS, Quality awards.	7
3	Single Vendor Concept, J.I.T., Quality Function deployment, Quality Circles, KAIZEN, SGA POKA - YOKE, Taguchi Methods. SMED, Kanban system. Cost of quality. Robust design	8
4	Methods and Philosophy of Statistical Process Control, Control Charts for Variables and Attributes	8
5	Cumulative sum and exponentially weighted moving average control charts, Others SPC Techniques – Process Capability Analysis. Acceptance Sampling Problem, Single Sampling Plans for attributes, double, multiple and sequential sampling,]	8
6	Six sigma manufacturing concepts. Six-sigma philosophy Quality strategy and policy. Motivation and leadership theories. Continuous vs. breakthrough improvements. Management of change, DMAIC Methodology. Lean manufacturing	7

OE-II : ME2342- RELIABILITY ENGINEERING

	Objective		Course Outcome	
1)	To develop in the engineering students the ability to analyze any engineering problem in a simple and logical manner and to apply a few well understood	1) 2)	Student will be able to use reliability modeling as a tool for evaluating system performance. Student will be able to analyze the failure of a	
2)	basic principles to find its solution. Learn how to get higher operating plant and equipment reliability that lifts efficiency and output of		machine, determine the failure rate of systems or components. Student will able to understand importance of the	
	operating assets, stops equipment failures and creates higher plant and equipment reliability, with this subject.	4)	maintenance of engineering systems and factors affecting maintainability.Student will be able to prepare the production & maintenance schedule of particular engineering	
			system.	

Unit No.	Contents	Max. Hrs.
1	Fundamental concepts:-	7
	Reliability definitions, failure, Failure density, Failure Rate, Hazard Rate, Mean Time To	
	Failure, MTBF, maintainability, availability , safety and reliability, Quality, cost and system	
	effectiveness, Life characteristic phases, modes of failure, Quality and reliability assurance rules, product liability, Importance of Reliability,	
2	Probability theory:-	7
	Set theory, laws of probability, total probability theorem, probability distributions, parameters and applications.	
3	System reliability and modeling:	8
	Series and parallel components, mixed configuration, complex systems. Redundancy, element	
	redundancy, unit redundancy, standby redundancy. Types of stand by redundancy, parallel	
	components. Markov models for reliability estimation.	
4	Maintainability and Availability:	8
	Objectives of maintenance, types of maintenance, Maintainability, factors affecting	
	maintainability, system down time. Availability - Inherent, Achieved and Operational	
	availability, reliability and maintainability trade-off. Markov models for availability estimation.	
5	System reliability Analysis:	8
	Reliability allocation or apportionment. Reliability apportionment techniques . Reliability	
	block diagrams and models. Reliability predictions. Life testing and accelerated testing.	
6	Strength based reliability:	7
	Safety factor, safety margin, Stress strength interaction, Failure Mode, Effects and Criticality	
	Analysis-, , FMECA examples, Ishikawa diagram .fault tree construction, basic symbols	
	development of functional reliability block diagram, Fault tree analysis, fault tree evaluation	
	techniques, Design of Mechanical components and systems:-Material strengths and loads.

OE-II : ME2344- PROJECT EVALUATION & MANAGEMENT

Objective	Course Outcome
	The students will be able
The course focuses on developing complete understanding of formulating a problem/project and finding possible solutions against the given constraints. The overall learning shall resolve project identification evaluating its technical and economic feasibility and developing skills for its planning, and establishing controls. Relevant techniques, writing skills and monitoring methods shall be dealt with in details.	 To apply the concepts of monitoring and evaluation, appraise To analyse the best monitoring methods, appreciate evaluation in the context of developmental project work To perform problem analysis, determine relevant indicators and data necessary for evaluation, Implement a monitoring and evaluation process, establish baselines and targets

Unit No.	Contents	Max. Hrs.
1	Project Identification considering objectives and SWOT analysis, Screening of Project Ideas, Technical, Market, Financial, Socioeconomic and Ecological Appraisal of a project demand forecasting, secondary data, accuracy, confidence level, uncertainty	7
2	Technical feasibility : Process selection, Level of automation, plant capacity, acquiring technology, Appropriate technology plant location, Equipment selection & procurement, Govt. policies. Value analysis and project evaluation:	7
3	Economic feasibility: Cost of Project, working capital analysis, fixed cost, means of finance, estimation of sales & production price analysis, Breakeven point, Projected cash flow statements, projected balance sheet, projected profit & loss statement, projected cash flow, rate of return, Discounted payback period, cost benefit analysis, return after taxes.	9
4	Project Planning and Control: Work break down structure and network development. Basic Scheduling, Critical Path and four kinds of floats. Scheduling under probabilistic durations, Time Cost tradeoffs, CPM, PERT, Optimum project duration, resource allocation, updating	7
5	Project report: Preparation of project report, risk analysis, sensitivity analysis, methods of raising capital	7
6	Initial review, performance analysis, ratio analysis, sickness, project revival, Project Monitoring with PERT/Cost, Organizational aspects, Computer packages and Project Completion environ- mental & social aspects.	8

VI Semester

GE2312 - Fundamental of Economics

Objectives	Outcome (Students will be able to)		
Recognizes consumer's behavior and pricing.	Relate their buyer behaviour to particular product and the pricing in the market.		
Extrapolates an operations in market with productions constrain.	Examine and classify various market structure and factors of production and its role in production process.		
Describes the national income accounting and public finance.	Analyse the national income accounting and the various issues related to banking, taxation, and inflation.		
Interprets international trade and institutions.	Elaborate about international economics, foreign trade and its agreement, export, foreign exchange and the various international financial institutions.		

UNIT-1: Introduction to Economics and Consumers' Behaviors:

Definitions, meaning and importance of economics Utility analysis: concept and measurement (cardinal and ordinal), Law of diminishing marginal utility, exceptions to law of diminishing marginal utility, law of equi-marginal utility, Indifference curve analysis: Meaning and properties of indifference curve, marginal rate of substitution, budget constraint, Complement and substitute goods, Consumer's equilibrium. Demand Analysis: Meaning and determinants of demand, law of demand, exception to law of demand, Elasticity of Demand-price, cross and income elasticity, measurement of elasticity of demand. (8 Hours)

UNIT-2: Production and Costs

Factors of Production: Land, Labour, Capital, Enterprise and their peculiarities, Importance of Capital in production process. Entrepreneur and Innovations, Product and Process innovations, Concepts and types of costs: Fixed vs variable, total, average and marginal costs, Short run and long run cost curves. Law of Variable proportions (Law of diminishing marginal returns) and Return to Scale (Increasing, constant and decreasing), Economies and diseconomies of scale. Depreciation: Meaning and various method of calculating depreciation. **(6 Hours)**

UNIT-3: Market structures - equilibrium output and price

Forms of market structures: Perfect competition, monopolistic competition, oligopoly, duopoly and monopoly, Demand and revenue curves for firm and industry in various forms of market structure, Total, average and marginal revenue curves, equilibrium of firms and industries under various forms of market structures, Price discrimination - Degrees and conditions of discrimination. (7 Hours)

UNIT-4: National income accounting:

Concepts of GDP and GNP, Estimation of GDP and GDP at factor and market prices, at constant and current prices, difference between GDP and NDP, GNP and NNP, per capita income as a measure of economic wellbeing, concepts of economic growth and development, Factors affecting economic growth and development. Capital formation and accumulation. (5 Hours)

UNIT-5: Money, Banking and Public Finance

Money: definition, functions and role, Evolution of money, Banking- reserve ratios and credit creation by commercial banks, Functions of a central bank and instruments of credit control, Functions of money market. Inflation: Meaning, types, causes and consequences, measures to control inflation, Concepts of deflation and Stagflation. Sources of public revenue and forms of government expenditure, Taxation: Cannons of taxation. Classification of taxes-Direct (Income tax, Wealth tax, Corporation tax, tax on capital, capital gains, etc) and Indirect Taxes (GST, Import duties), Revenue and capital expenditure.

(7 Hours)

VI Semester ME2351 - Fluid Machines

Objective	Course Outcome
Students should apply the fundamentals of fluid dynamics	CO:1 The student will be able to describe and analyze
and thermodynamics to compressors. To understand basic cycles, types and components of I.C. Engines. To	the working of Positive Displacemnt Pumps .[a,e,k]
understand the basics of refrigeration, air	CO:2 The student will be able to describe and analyze
conditioning.[a,e,k]	the working Centrifugal Pumps .[a,e,k]
	CO:3 The student will be able to define evaluate Static
	and Stagnation properties and; describe and analyze the
	compressible flow.[a,e,k]
	CO:4 The student will be able to describe and analyze
	the working of compressors.[a,e,k]

Unit No.	Contents	Max. Hrs.
<u>Unit 1</u>	Classification of Positive displacement Pumps: Study of Rotary pumps such as vane pump, Gear pump and Screw pump. Reciprocating pumps: Basic principle, types, Main components, Slip, Work done. Indicator diagrams, Separation, Air vessels [CO:1]	[8 hrs]
Unit 2	Centrifugal Pumps: Components and Principles of operation, Classification, Priming, Fundamental equation, Various heads, Velocity triangles and their analysis, Effect of outlet blade angle, Vane shapes, Losses & efficiencies of pumps, N.P.S.H, Cavitations in pumps, Performance characteristics [CO:1]	[7 hrs]
Unit 3	Reciprocating compressors: - Parts, Operations, Work done during isothermal, polytropic & adiabatic compression process, P-V diagram, isothermal efficiency, Effect of clearance, volumetric efficiency, Mechanical efficiency. Multistaging in reciprocating compressor, condition for minimum work input, capacity control, Actual indicator diagram [CO:1]	[8 hrs]
<u>Unit 4</u>	Compressible Flow: Stagnation properties, speed of sound wave, Mach number, one dimensional isentropic flow, Stagnation properties, Isentropic flow through convergent-divergent nozzles, Adiabatic Expansion in Nozzles, Maximum Discharge Critical Pressure Ratio and effects of Friction, Calculation of Throat and Exit Areas, [CO:2]	[7 hrs]
<u>Unit 5</u>	Centrifugal compressor:-Principle, operation, parts, velocity diagram, static & stagnation quantities, work done by impeller, isentropic efficiency of compressor. Slip factor, pressure coefficient and power input factor. [CO:3]	[7 hrs]
<u>Unit 6</u>	Axial flow compressor:-Principle, operation, parts. Velocity diagram, work done, degree of reaction stage efficiency compressor characteristics, surging & chocking. [CO:4]	[8 hrs]

VI Semester ME2353 –Computer Aided Design LAB

Objectives:	Course outcomes:
To educate students on -Main concepts of computer aided design -Graphics representation of curves. -Surface and solids.	 Students will be able to: Distinguish the various CAD CAM tools and also evaluate criteria for CAD CAM systems Design 2D and 3D Transformation matrices Calculate and analyse the parametric equations for wire frame. surface and solid modeling entities. Design the applications of modeling and evaluate data exchange formats

List of Practical

A set of 10 Experiments from following list to be performed.

- 1. Introduction to CAD software.
- 2. Simple examples of two dimensional transformations
- 3. Simple examples on three dimensional transformations.
- 4. Programs on 2-D transformations- scaling, rotation, reflection and translation
- 5. 3-D Wireframe object modeling using any CAD software.
- 6. Generation of analytical curves using any CAD software
- 7. Generation of synthetic curves using any CAD software
- 8. Basics of surface modeling using Extrude, Revolve, fill, sweep, variable section sweep commands using any CAD software.
- 9. Creating fill surfaces, lofted multi-section surfaces, blended surfaces using any CAD software.
- 10. Analyzing the curve and surface quality using any CAD software.
- 11. Generation of at least two simple solid models showing geometric properties using any CAD software.
- 12. To generate at least two simple assembly model using any CAD software.
- 13. Solid model generation using feature based modeling using any CAD software
- 14. Drafting of the solid models previously developed in any CAD software.[a,e,k]
- 15. Programs on windowing and clipping.[a,e,k]

VI Semester ME2354 – Design of Mechanical Drives **Objectives**: Course Outcome: To develop the concept of drive system and impart Students will be able to: knowledge of various components of industrial 1. Dscribe the design process, material drives. To enable the students in selecting proper selection & calculations of stresses in flat drive system. To make the students capable of belt. V belt, chain drive and rope drive, and selecting proper gear drive and design the components of geared system. To emphasize the finding its ailure criteria. 2. Design the various gear drive such as spur, need of reducing cyclic fluctuations in speed by helical, worm & worm wheel and bevel providing appropriate flywheel. To enable to take up gears, and finding its failure criteria. small projects in design of haulage system. 3. Summarize the knowledge on shafts, coupling and flywheel and finding its failure criteria. 4. Evaluate the radial and thrust load for

Unit No.			Contents			Max. Hrs.		
<u>Unit 1</u>	 Flat belt drive: Types of belts & belt material, analysis of belt tension, condition for transmitting maximum power, design of flat belt, flat belt pulley. V belt drive: Types of V-belt, analysis of V-belt tension, design of V belt pulley. 							
Unit 2	 Chain Drive: Design of roller chain drive, types of chain, concept of chordal action, lubrication ,types of sprocket, Rope drive: Introduction to haulage system, construction of rope, design of wire rope, sheave and drums Electric motor rating, their Characteristics, controls, selection motors. 							
Unit 3	Gear drive: Review of Kinematics of gears & terminology, interference, tooth profiles, formative number of teeth etc. Bukingham equation, design of spur gear drive, helical gear drive.							
<u>Unit 4</u>	 <u>4</u> Worm gear drive: Types and proportion of worm and worm gear, force analysis, beam strength of worm gear teeth, dynamic tooth load, wear load, thermal rating of worm gear, design of worm and worm gear. Bevel gear drive: Types of bevel gear, proportions of bevel gear, force analysis of bevel gear drive design of bevel gear drive. 							
<u>Unit 5</u>		pes of shaft couplin	g, design of fla	nge coupling, fl	exible bush	[7 hrs]		
	coupling. Flywheel: Coefficient of fluctuation of energy and Coefficient of fluctuation of speed, energy store in flywheel, stresses in flywheel, design of flywheel.							
<u>Unit 6</u>

VI Semester ME2361 – PE-I : Finite Element Method

Objective	Course Outcome		
To develop ability to analyze simple mechanical engineering problems. To understand and apply basic governing principals in logical manner to	 (I) The students will be able to understand fundamentals of finite element method.[e] 		
find solutions. [e]	 (II) The students will be able to analyse the Mechanical engineering problems[e] 		
	(III) The students will be able to find solutions for simple mechanical Engineering problems [e]		
	(Iv) The students will be able to analyze structure [e]		

Unit No.	Contents	Max. Hrs.
1	Fundamentals of stress & strain, stress & strain components, stress strain relationship, Elastic constants, plane stress, plane strain., differential equation of equilibrium, compatibility equations, boundary conditions, Saint Venant's principle.	7
2	Fundamental concepts of FEM -' Historical background, Scope of FEM in Engg. Applications, Principle of minimum potential energy. Concept of Virtual work. Raleigh-Ritz method. FEM analysis procedure. Mathematical understanding required for FEM, Matrix algebra & operations, Eigen values & Eigen vectors. Methods for solution of simultaneous equations. like Gauss elimination. Matrix decomposition method.	7
	Concept of discritization of body into elements. degrees of freedom, bandwidth, Basic types of 2-D & 3-D elements, displacement models, convergence requirements, shape function. Programming for above matrices	
3	Finite element modeling and analysis of one dimensional problems: Finite element modeling & analysis using Bar & Beam element -stiffness matrix, assembly, boundary conditions, load vector, temperature effects. Two dimensional plane trusses-Local & Global coordinate system, element stiffness matrix, assembly, boundary conditions, load vector, force & stress calculations. Programming for simple bar and beam elements.	8
4	Two dimensional problems using CST & LST -formulation of CST & LST elements, elemental stiffness matrix, assembly, boundary conditions, load vector. stress calculation. Temperature effect . Axi-symmetric solids subjected to axi-symmetric loading -axi-symmetric formulation using CST ring, element, stiffness matrix, boundary conditions, load vector, calculation of stresses. Programming for simple 2-D problems using CST and LST elements.	8
5	Introduction to Isoperimetric & Higher order elements. Introduction to Numerical Integration. Introduction to dynamic analysis, formulation of mass matrix for one-dimensional bar element, free vibration analysis using one-dimensional bar element. Torsion of prismatic bars using triangular elements. Programming for these elements.	7
6	Application of commercial software for simple machine elements and interpretation of results.	8

VI Semester

ME2362 – PE-I : Lab: Finite Element Method

Objectives:	Course outcomes:						
To develop an ability to analyze simple mechanical engineering problems using analysis software	 After completion of the course students would be able to 1. Study, analyse and develop the fundamentals of Finite Elements Method for 						
• To examine and build the solutions using the commercial softwares for simple machine elements	mechanical engineering problems.2. Evaluate the stresses, strains and deformation in simple machine elements and						
[PO-1,2,3,5,6,7,8,9,10,11,12,PSO-1,2]	design solutions for simple problems.						
	3. Build the solutions using the commercial softwares for simple machine elements.						

List of Practical:-

- 1. To study about Finite Element Methods [PO-1,3,5,6,7,8,9,10,11,PSO-1,2]
- 2. To determine stress and strain in 1-D bar element [PO-1,2,3,5,6,7,8,9,10,11,12,PSO-1,2
- 3. To determine stress and strain in Composite element [PO-1,2,3,5,6,7,8,9,10,11,12,PSO-1,2]
- 4. To determine principle stress and strain in CST element [PO-1,2,3,5,6,7,8,9,10,11,PSO-1,2]
- 5. To determine stress and strain in CST element [PO-1,2,3,5,6,7,8,9,10,11,12,PSO-1,2]
- 6. To study the performance of structural tutorial [PO-1,3,5,6,7,8,9,10,11,PSO-1,2]
- 7. Deflection of Beam (Simply Supported Beam) [PO-1,2,3,5,6,7,8,9,10,11,12,PSO-1,2]
- 8. Tutorial of 2D truss analysis in Mechanical APDL (Ansys). [PO-1,2,3,5,6,7,8,9,10,11,2,PSO-1,2]

VI Semester ME2363 – PE-I: Industrial Fluid Power

Objective	Course Outcome
 To understand the working principle of hydraulic and pneumatic components and its selection. To design hydraulic and pneumatic circuits for different applications. 	 To investigate the hydraulic fluids and apply the fluid power laws and principals for analysis of simple fluid power system. To identify, analyze, and justify selection of suitable components of fluid power system for specific applications based on its function, performance and working characteristics.
	 To design and examine the fluid power system and to compose and interpret its circuit diagrams using standard symbols.
	 To examine the safety measures, maintenance, and trouble shooting for fluid power systems.

Unit No.	Contents	Max. Hrs.
1	 Fluid power systems: Components, advantages, applications in the field of M/c tools, material handling, hydraulic presses, mobile & stationary machines, clamping & indexing devices etc. Transmission of power at static & dynamic states. Pascal's law and its application to hydraulics, Bernoulli's principle, continuity equation, analysis of simple hydraulic jack. Types of Hydraulic fluid, petroleum based, synthetic & water based. Properties of fluids. Selection of fluids, additives, effect of temperature & pressure on hydraulic fluids, SAE grades and ISO viscosity numbers. Filters, strainers, types and sources of contamination of fluid & its control, effects, ISO contaminant code. JIC symbols/ISO Symbols for hydraulic & pneumatic circuits. Hydraulic Reservoirs and Power Pack : functions and its elements, standard designs. 	5
2	 <u>Pumps:</u> Types, classification, principle of working & constructional details of pumps used in Hydraulic system such as vane pump, gear pumps, radial & axial plunger pumps, power and efficiency calculations, characteristic Curves, selection of pumps for hydraulic power transmission. <u>Accumulators & Intensifiers</u>: Types & functions of accumulators & intensifiers, applications, selection & design procedure. 	6

VI Semester ME2363 – PE-I: Industrial Fluid Power

Unit Max. Contents No. Hrs. 3 Unit 3 [5 hrs] 5 Control Of Fluid Power: Necessity of pressure control, directional control and flow control valves, methods of actuation of valves. **Pressure Control Valves:** Principle of pressure control valves, types, constructional features, direct operated, pilot operated, relief valves, pressure reducing valve, sequence valve. Flow Control Valves: Principle of operation, types, constructional features, pressure compensated, temperature Compensated flow control valves, meter in & meter out flow control circuits, bleed off circuits. Direction Control Valves: constructional features, types, Check valves, types of D.C. valves:- Two way two position, four way three position, four way two position valves, open center, close center, tandem center valves, method of actuation of valves, manually operated, solenoid operated, pilot operated etc 4 Actuators: Classification, constructional features and working, Linear & Rotary actuators. 5 Hydraulic motors: Types, vane, gear piston, radial piston. Theoretical torque, power & flow rate hydraulic motor performance. Hydraulic Cylinders: Types of cylinder & mountings, cushioning, calculations of force, velocity and power from a cylinder. Design consideration for cylinders. Design and analysis of Hydraulic Circuit such as: 5 6 1) Control of single and Double -acting hydraulic cylinder, 2) regenerative circuit, 3) pump unloading circuit, 4) double pump hydraulic system, 5) counter balance valve application, 6) hydraulic cylinder sequencing circuits, 7) cylinder synchronizing circuit using different methods, 8) hydraulic circuit for force multiplication; 9) speed control of hydraulic cylinder metering in, metering out and bleed off circuits. 10) Pilot pressure operated circuits. 11) Hydraulic circuit examples with accumulator /intensifier. 12) circuit to lift and hold heavy load, 13) Pressure control for cylinders, 14) Flow divider circuits Safety precautions, maintenance and trouble shooting of Hydraulic Circuits.

VI Semester ME2364 – PE-I : Lab: Industrial Fluid Power

Objective	Course Outcome
 To understand the working principle of hydraulic and pneumatic components and its selection. To design hydraulic and pneumatic circuits for different applications. 	 To investigate the hydraulic fluids and apply the fluid power laws and principals for analysis of simple fluid power system. To identify, analyze, and justify selection of suitable components of fluid power system for specific applications based on its function, performance and working characteristics. To design and examine the fluid power system and to compose and interpret its circuit diagrams using standard symbols. To examine the safety measures, maintenance, and troubleshooting for fluid power systems.

List of Experiments: Minimum Eight out of the following areas shall be performed:

A. Experiments on Hydraulics Circuits:

- 1. Extend-Retract and Stop system of a linear actuator.
- 2. Regenerative circuit.
- 3. Speed Control circuits: meter-in, meter-out and bleed off.
- 4. Sequencing circuit
- 5. Use of solenoid operated DCV.
- 6. Traverse and Feed circuit.

B. Experiments on Pneumatic Circuits:

- 7. Study of Compressor, FRL unit and 5/3 DCV.
- 8. Reciprocating motion of a single and a double acting actuators.
- 9. Speed control circuits.
- 10. Automatic to & fro motion of a pneumatic linear actuator.
- 11. Sequencing circuit.
- 12. Logical circuits.

Other practical work:

- 13. Design **report** of a hydraulic or pneumatic system using **manufacturer's catalogue**.
- 14. Study of accumulators and intensifiers.
- 15. **Industrial visit** to study automation by means of hydraulic and pneumatics such as LPG bottling plant etc
- 16. Study of **compressed air generation and distribution** systems.
- 17. Study of **simple hydraulic systems** used in practice such as hydraulic clamps, jack, dumper, forklift etc.

18. Other circuits possible on the trainer kit, relevant to the syllabus

VI Semester ME2364 – PE-I : Lab: Industrial Fluid Power

C. Students should build up the above circuits on computer using software and simulate the flow of fluid during the operation if possible. Afterwards, they themselves can physically connect the circuit on the hydraulic/pneumatic trainer and run the circuit.

Major Equipment:

- 1. A hydraulic trainer
- 2. A pneumatic trainer
- 3. Simulation Software (not mandatory)

List of Open Source Software/learning website:

- 1. Autosim Premium
- 2. Hydrosym

ACTIVE LEARNING ASSIGNMENTS:

Preparation of power-point slides, which include videos, animations, pictures, graphics for better understanding theory and practical work – The faculty will allocate chapters/ parts of chapters to groups of students so that the entire syllabus to be covered.

VI Semester

ME2365 – PE-I : I.C. Engines

Objectives:	Course Outcome
To understand basic working cycles, types and development of I.C. Engines. To study the various systems related to I.C. Engines. To understand testing and performance of Engines. To study fuels, combustion, pollution	cycles, construction and and systems of I.C. Engines.
and its control of engines	 Student should able to analyze fuels, combustion process, pollution and its control of engines.
	3. Student should able conduct a trial for Engine performance evaluation.

Unit No.	Contents	Max. Hrs.
1	Engines classification, Working cycles and operation, P-V, Valve Timing diagrams, Engine components and their material .Engine cycle Energy Balance, various losses in the engine like Frictional losses, blow by losses, pumping loss etc. Engine Lubrication systems, cooling systems and their importance.	7
2	I.C.Engines fuel and its desirable properties. Requirements of S.I and C.I. Engine fuel Other fuel like CNG, LPG, Alcohols Rating of I.C. engine fuels	8
3	Fuel supply systems for S. I. Engine: A-F mixture requirements, Basic principle, Simple Carburetor and systems like main metering, choke, idle, acceleration pump. Operating difficulties for carburetors. Petrol Injection SPFI., MPFI, Direct Gasoline Injection, Ignition system & components for S.I.Engine - Battery, Magneto & Electronic.	8
4	Combustion in S. I. Engine: Stages of combustion with p-θ diagram. Factors affecting various stages of combustion. Abnormal combustion Pre ignition, Detonation and Knocking. HUCR,S.I.Engine combustion chamber.	7
5	Fuel supply systems for C.I.Engine: Requirements of an ideal FI system, Types of Injection, Fuel injection pumps, fuel injectors and nozzles. Combustion in C. I. Engines. Stages of combustion with p-θ diagram, Factors affecting various stages of combustion. Abnormal combustion Diesel Knock, Supercharging and turbo charging in engine.	7
6	Engine performance Parameters. MEP, Torque ,speed, power, Specific fuel consumption and various efficiencies., Air measurement, Excess air and Volumetric efficiency, Measurement and Testing of friction power ,indicated power, Brake power, Fuel consumption, Air consumption, etc. Heat balance sheet calculation. Air pollution from I.C.Engines and their control using EGR, Catalytic converters, particulate traps.	8

MECHANICAL EGNINEERING

SoE No. **ME-202.1**

VI Semester ME2366 – PE-I : I.C. Engines LAB

List of Practical

- 1. Study and demonstration of working of 2-S & 4-S Engines.
- 2. Study and demonstration of Lubrication & Cooling systems.
- 3. Study of fuel systems for S.I. engines
- 4. Study of fuel systems for C.I. engines.
- 5. Determination of Air: Fuel ratio for Petrol Engine.
- 6. Determination of Air: Fuel ratio for Diesel Engine
- 7. Determination of BP/FP/IP of Engine.
- 8. Heat balance sheet calculation.
- 9. Visit to Automobile Industry / workshop.

MECHANICAL EGNINEERING

SoE No. ME-202.1

VI Semester ME2367 – PE-I: Refrigeration & Cryogenic

Objectives	Course Outcome
 To study and analyse Vapour Compression Refrigeration Systems. To study vapour absorption and other refrigeration systems. To study and analyse Air Cycle Refrigeration Systems. To study cryogenic technology 	 The student will be able to describe, analyze and evaluate Vapour Compression Refrigeration System. The student will be able to describe and analyze other refrigeration system such as Vapour Absorption Refrigeration System, Electrolux refrigeration system, steam jet refrigeration systems, thermoelectric refrigeration and vortex tube refrigeration The student will be able to describe, analyze and evaluate Air Cycle Refrigeration Systems. The student will be able to describe and analyze
	Cryogenic Systems.

Unit No.			Contents			Max. Hrs.			
1		systems eration, reversed Brayto ot strap cycle, reduced a				7			
2	Introduction to r Vapour compres	sion Refrigeration system refrigeration, application ssion Refrigeration cycl of pressure drops, polytre	s of refrigeration, e, effect of chang	ge in evaporator	and condenser	8			
3	Multistage Refrigeration systems Working and analysis of multistage systems multiple evaporator and multiple compressor systems. [CO:I]								
4	Components of Vapour compression system Various components used in refrigeration system like compressors, condensers, evaporators, expansion devices and its types, cooling towers, various control use in refrigeration system Refrigerants Types and classification, properties and nomenclature, environment friendly refrigerants. [C0:1]								
5	Other refrigeration systems Vapor absorption systems (NH3- H20, LiBr- H2O) , Electrolux refrigeration system, Steam jet refrigeration systems, Thermoelectric refrigeration, Vortex tube refrigeration. [CO:2]								
6	6 Cryogenics 8 Introduction and applications of cryogenics, Cascade refrigeration, Joules Thomson effect, methods of air liquefaction, Linde's and Claude's cycle .Liquefaction of hydrogen, Liquefaction of helium, cryogenic insulation. Hazards and safety, production of dry ice. [CO:4] 8

VI Semester

ME2369 – PE-I: Computer Integrated Manufacturing

Objective	Course Outcome
To develop in the engineering students the ability to analyze any engineering problem in a simple and logical manner and to apply to its	CO1 : The Students will have ability to design and evaluate experimentation on CNC machines.
solution a few, well understood basic principles.	CO2: Designing of GT cell layouts for transforming into flexible manufacturing system.
	CO3: The students will be able to compose and transform robot programs various industrial applications.
	CO4: The students will have ability to justify CAPP and CAQC to design computer integrated manufacturing

Unit No.	Contents	Max. Hrs.
1	Concept and scope of CIM, components of CIM, benefits, limitations.Basics of computer graphics NC basics, NC words, Manual part programming (NC part programming) Punch Tape, Tape Format CNC, DNC, APT programming Adaptive control, application. Tooling for CNC machine.	7
2	Introduction to Group Technology, Limitations of traditional manufacturing systems, characteristics and design of groups, benefits of GT and issues in GT. Part families , classification and coding , Production flow analysis , Machine cell design , Benefits	7
3	Introduction & Components of FMS, Application work stations, Computer control and functions, Planning, scheduling and control of FMS, Scheduling, Knowledge based scheduling, Hierarchy of computer control, Supervisory computer Manufacturing data systems, data flow, CAD/CAM considerations, Planning FMS database	8
4	Industrial robotics Robot anatomy, Robot control, accuracy, repeatability, End Effectors Sensor, Introduction to robot programming, Robot application (Material handling processing assembly and inspection) introduction to robot Kinematics.	8
5	Process Planning in the Manufacturing cycle, Process Planning and Production Planning Process Planning and Concurrent Engineering, CAPP, Variant process planning, Generative approach, Forward and Backward planning, Input format, Logical Design of a Process Planning, Implementation considerations, manufacturing system components, Automated material handling systems, AS/RS, general considerations, selection, evaluation and control. Inspection and Quality control, CAQC, CMM types, working, applications Expert process planning	10
6	Totally integrated process planning systems, Integration of CNC robotics for CIM, Agile manufacturing, Nano Manufacturing. Simulation	5

devices.(3) Concept development to bridge the existing gap between machines, Automation and	 (II) Students will be able to understand the working of various motors used in mechatronic systems 					
Computer control system.[a,b,c,i,j]	Analyze the characteristics and use of various IC's.					
	(III) Student will be able to analyze the characteristics and use various IC's.					
	(IV) Students will be able to analyze the internal hardware structure in Mechatronics Systems.					

Unit No.	Contents	Max. Hrs.					
1	Introduction, sensors, actuators, modeling of systems. Recent trend of designing machine units along with electronic circuits for operation and supervision of mechanisms. Techniques of interfacing mechanical devices with computer hardware.	7					
2	Basic principles ,working and specific applications of armature and field controlled D.C. Motors, Variable voltage and variable frequency control of 3 phase and single phase Induction motors, speed control of synchronous motors, Different types of stepper motors-Constriction ,working and application. Position control of stepper motors.	8					
3	Common and commercial I.Cs used for amplification, timing and digital indication. Different types of actuators, working of synchro-transmitter and receiver set, Pressure to current (P/I) and I/P conversion. Electrical and hydraulic servomotors. Design of solenoid plungers and pressure and force amplification devices.	8					
4	Add-on cards for sampling and actuation, 4-20 mA ports, AD-DA conversion, Peripheral interface organization, general layout of data bus and data transfer through serial and parallel modes of communication, schemes of computer networking and hierarchy in supervisory control.	7					
5							
6	General philosophy of Artificial Neural Network simulations, Fuzzy logic for operation and control of mechatronic systems.	7

VI Semester

ME2373 – PE-I : Thermal Engineering Systems

Objective	Course Outcome
	CO:1 The student will be able to describe and analyze the Solar and Biogas Energy Systems [PO: 1,2,3,4,5,6,7,8,9,10,11,12 PSO-1,2]
	CO:2 The student will be able to describe and analyze the working of I.C.Engines. [PO: 1,2,3,4,5,7,8,9,10,11,12 PSO-1,2]
	CO:3 The student will be able to describe and analyze the working of Refrigeration systems [PO: 1,2,3,4,5,7,8,9,10,11,12 PSO-1,2]
	CO:4 The student will be able to define evaluate Psychromatic properties and; describe and analyze the air conditioning processes. [PO: 1,2,3,4,5,7,8,9,10,11,12 PSO-1,2]

Unit No.	Contents	Max. Hrs.				
1	Solar Energy: Introduction, solar constant, spectral distribution of solar radiation, beam & deffuse radiation, Solar radiation geometry, solar angles, estimation of average solar radiation, radiation on horizontal and tilted tilted surface.	5				
2	Solar flat plate collectors: Types of collectors, liquid flat plate collectors, solar air heaters	6				
	Concentrating collectors: line focusing, point focusing and non focusing type					
	Applications of solar energy to water heating, space heating, space cooling, drying refrigeration, distillation, pumping. Solar furnaces, solar cookers, solar thermal electric conversion, solar photo- voltaics					
3	Wind Energy:-Power in wind, forces on blades, wind energy: Basic principle of wind energy5conversion, basic components of WECS Classification of WEC systems, savonius and darrieus rotars applications of wind energy5					
	<u>Biogas:</u> - Introduction, bio gas generation, fixed dome & floating drum biogas plants their constructional details, raw material for biogas production, factors affecting generation of biogas and methods of maintaining biogas, production, fuel properties of biogas and utilisation of biogas					
4	I.C.Engines: Air standard cycles, parts of I.C.Engines, working of I.C. Engines, Classification of IC Engines, I.C.Engines Testing:-Measurement of power: indicated, friction &brake power, measurement of speed, fuel & air consumption, calculation of indicated &brake thermal efficiency, volumetric efficiency, mechanical efficiency, Heat balance sheet.	6

VI Semester

OE-III : ME2381 – Operation Research Techniques

Objective	Course Outcome
	After completion of this course, Students will be able
The course aims to develop the engineering - analysis capability for engineering-problems	to
using basic statistical tools and techniques. Detailed treatment of various data analysis and handling technique leading to complete understanding and modeling the processes	 Apply basic operations research techniques to formulate given situation as LLP and solving by graphical & simplex method.
including its optimization is envisaged in this course.	 To Solve Transportation and Assignment Models and analyze the concept of dynamic programming to Solve problems of discreet and continuous variables.
	 Analyze projects for minimum total cost and smooth level of resources.
	4) Evaluation of different replacement policies and its application in operation research and analysis of the application of simulation, inventory control model and waiting line model.

Unit No.	Contents	Max. Hrs.
1	Introduction to OR & Basic OR Models, Definition Characteristics and limitations of OR. Linear programming solutions (LPP) by graphical methods and simplex method. Sensitivity analysis. (CO-1)	7
2	Assignment Model and Transportation Model. (CO-2)	7
3	Dynamic programming - characteristics, approach and its formulations. Application of Dynamic programming in Employment smoothening problem, Resource allocation, Inventory control & Linear programming. (CO- 2) [6 hrs]	6
4	Project Management: Network Scheduling by CPM & PERT, Cost considerations in PERT and CPM. (CO-3)	7
5	Replacement Models: Replacement of Models that deteriorate with time, Concept of equivalence, Interest Rate and Present worth. Replacement of items that fails suddenly considering Individual and Group replacement policy. (CO-4)	6
6	Queuing Theory: Queuing Systems, Kendelalls for representing queuing models, Classification of queuing models (No derivations expected), Simulations, Monte- Carlo Simulation. Inventory Control with Deterministic models. (CO- 4)	4

VI Semester

OE-III : ME2382 – Automobile Engineering

Objective	Course Outcome
The main objective of the syllabus to understand	(1) Student will be able to analyze various systems of
basic knowledge about vehicle systems which are used in the regular automobiles. The	Engine, its function including fuel supply, cooling and lubrication system in vehicle.
modernization in automobile is also included to understand recent trend in the field.	(2) Student will be able to describe_various power transmission systems from clutch to wheel in vehicle.
	(3) Student will be able to evaluate and describe control systems like steering and brakes in vehicle.
	(4) Student will be able to illustrate and describe the necessary electrical and luxurious systems and safety system in vehicle.

Unit No.	Contents	Max. Hrs.
1	 Introduction, Automobile history and development and classification. Vehicles layout. Engine Classification, construction and working 2 stroke and 4-stroke cycle. Introduction to Fuel supply system: Carburettor and fuel injection.(Only basic) Engine cooling and lubrication systems. [CO-1] 	7
2	Clutch – Necessity, requirements of a clutch system. Types of Clutches: Single & multi plate clutch, Diaphragm clutch and centrifugal clutch.	6
	Gear box: Necessity of gear box with gear theory, working principle, Classification: Sliding mesh, constant mesh, synchromesh, and Transfer case gear box, Gear Selector mechanism, Defects and remedies in Gear box. Working of CVT (Continuous variable transmission) [CO-2]	
3	 Transmission system: Propeller shaft, Universal joint, Hotchkiss drive, torque tube drive. Differential - Need and working principle and Differential lock. Rear Axles and Front Axles Wheel and Tyres: Classification, various constituents of tyres with cross section, specification, factors affecting tyre performance. [CO-2] 	7
4	 Steering systems, principle of steering, steering linkages, steering geometry and wheel alignment, steering gear box and its types. Brakes - Need, types: Mechanical, hydraulic (Master and wheel cylinder), Air brakes. Drum and Disc brakes, Comparison Suspension systems – Function, conventional and Independent suspension System, Telescopic shock absorber. [CO-3] 	6
5	 Electrical systems: Battery construction. Specification. Operation and maintenance of Batteries. Alternator, starter motor, Battery Ignition and magneto ignition systems, Lighting, Horn, Side indicator, wiper.(only basic) Automobile air-conditioning, Panel board instruments. [CO-4] 	6

VI Semester OE-III : ME2383 – Control Systems Engineering

Course Objectives	Course Outcome
To develop an ability to define transfer function.	 (I) Describe the mathematical representation of various control system components and determine the transfer function of mechanical,
To analyze the performance of control system in time domain and frequency domain.	 electrical, thermal and fluid system. (II) Analyse the construction and working of various control system components and electrical motors. (III) Evaluate the performance of control system using time response analysis and stability analysis. (IV) Analyze the performance of control system on the basis of frequency response and design suitable compensation for the control system

Unit No.	Contents	Max. Hrs.
1	Introduction, System concept Open and Closed loop control systems. Transfer function, Mathematical Modeling of Physical System and system representation through Block Diagram. Transfer function through Block Diagram Simplification. Signal Flow Graph, Masons Gain Formula Block diagrams of various control systems.	7
2	Representation of Control components: Mechanical and Electrical components; Analogous systems; Thermal and Fluid systems.	7
3	Electrical systems: - ac/dc servomotors; field controlled and armature controlled servomotors; positional servomechanisms; stepper motors. Hydraulic systems: - Hydraulic pumps (gear; vane; and reciprocating piston) Cylinders, Direction control valves (2, 3, 4 way) Flow control valve; Relief valve Hydraulic servomotor.	8
4	Transient and steady state response of first and second order systems Concept of stability; relative stability; Routh stability criteria.	8
5	Frequency response and its characteristics; Bode plots; Nyquist plots. Gain margin and phase margin. Identification of system transfer function.	8
6	Basic control actions; Proportional Integral and Derivative control actions and their effect on system performance. Root locus technique. Introduction to control system design log load compensation Feed Back Compensation and Pole -Zero placements.	7

MECHANICAL EGNINEERING

VI Semester OE-IV : ME2391 – Total Quality Management

The course aims to build an overall 1.	
 The course aims to build an overall capability to understand Quality and its relevance in today's dynamic market. Various Quality Improvement tools and technique shall be introduced and practiced so as to develop skills and knowledge to function as a good quality professional in the Engineering Profession. 4. 	 Develop an understanding on quality management philosophies and frameworks. Develop in-depth knowledge on various tools and techniques of quality management. To Evaluate the applications of quality tools and techniques in both manufacturing and service industry Ability to use quality management methods analyzing and solving problems of organization.

Unit No.	Contents	Max. Hrs.
1	Principles of Quality Management, Pioneers of TQM, Quality costs, Quality system Customer Orientation, Benchmarking, Re-engineering	7
2	Leadership, Organizational Structure, Team Building, Information Systems and Documentation – Quality Auditing, ISO 9000 - QS 9000.QMS, Quality awards.	7
3	Single Vendor Concept, J.I.T., Quality Function deployment, Quality Circles, KAIZEN, SGA POKA -YOKE, Taguchi Methods. SMED, Kanban system. Cost of quality. Robust design	8
4	Methods and Philosophy of Statistical Process Control, Control Charts for Variables and Attributes	8
5	Cumulative sum and exponentially weighted moving average control charts, Others SPC Techniques – Process Capability Analysis. Acceptance Sampling Problem, Single Sampling Plans for attributes, double, multiple and sequential sampling,	8
6	Six sigma manufacturing concepts. Six-sigma philosophy Quality strategy and policy. Motivation and leadership theories. Continuous vs. breakthrough improvements. Management of change, DMAIC Methodology. Lean manufacturing	7

VI Semester OE-IV : ME2392 – Reliability Engineering

Objective	Course Outcome
1.To develop in the engineering students the	(I) Student will be able to use reliability modeling as a
ability to analyze any engineering problem in	tool for evaluating system performance.
a simple and logical manner and to apply a	(II) Student will be able to analyze the failure of a
few well understood basic principles to find	machine, determine the failure rate of systems or
its solution.	components.
	(III) Student will able to understand importance of the
2.Learn how to get higher operating plant	maintenance of engineering systems and factors
and equipment reliability that lifts efficiency	affecting maintainability.
and output of operating assets, stops	(IV) Student will be able to prepare the production &
equipment failures and creates higher plant	maintenance schedule of particular engineering
and equipment reliability, with this subject.	system.

Unit No.	Contents	Max. Hrs.
1	Fundamental concepts:- Reliability definitions, failure, Failure density, Failure Rate, Hazard Rate, Mean Time To Failure, MTBF, maintainability, availability, safety and reliability, Quality, cost and system effectiveness, Life characteristic phases, modes of failure, Quality and reliability assurance rules, product liability, Importance of Reliability,	7
2	Probability theory:- Set theory, laws of probability, total probability theorem, probability distributions, parameters and applications.	8
3	System reliability and modeling: Series and parallel components, mixed configuration, complex systems. Redundancy, element redundancy, unit redundancy, standby redundancy. Types of stand by redundancy, parallel components. Markov models for reliability estimation.	7
4	Maintainability and Availability: Objectives of maintenance, types of maintenance, Maintainability, factors affecting maintainability, system down time. Availability - Inherent, Achieved and Operational availability, reliability and maintainability trade-off. Markov models for availability estimation.	8
5	System reliability Analysis: Reliability allocation or apportionment. Reliability apportionment techniques . Reliability block diagrams and models. Reliability predictions. Life testing and accelerated testing.	7
6	Strength based reliability: Safety factor, safety margin, Stress strength interaction, Failure Mode, Effects and Criticality Analysis-, , FMECA examples, Ishikawa diagram .fault tree construction, basic symbols development of functional reliability block diagram, Fault tree analysis, fault tree evaluation techniques, Design of Mechanical components and systems:-Material strengths and loads.	8

OE-IV : ME2393 – Power Generation Engineering

Objective	Course Outcome
The main objective of the syllabus to understand basic knowledge about vehicle	(1) Student will be able to describe basics of power generations systems.
systems which are used in the regular automobiles. The modernization in automobile is also included to understand recent trend in the field.	 (2) Student will be able to analyze various conventional & non-conventional power plants. (3) Student will be able to analyze and examine combined operations of different power plants.
	(4) Student will be able to evaluate and describe Hydroelectric power plant nuclear power plant

Unit No.	Contents	Max. Hrs.
1	THERMAL POWER PLANT- I	7
	Introduction to thermal power plants and power plant layouts. Site selection. Fuel characteristics, handling, storage, preparation & firing methods. Ash & dust collection and handling.	
	• Boiler: classification, general arrangement, details of different components and system like draught system, steam turbine systems, condenser, cooling towers [CO-1]	
2	THERMAL POWER PLANT- II	8
	Gas Turbine Power Plant: -Introduction, power plant layouts, Open cycle, close cycle power plants. Various components and systems. Methods to improve efficiency. Reheat and Regeneration cycle and their combinations Diesel Electric Power Plant: - Introduction, Outline, type of engines, different components, performance, plant layout. Comparison with other power plant. (visit to nearby power plant shall be arrange for the students) [CO-2]	
3	 HYDROELECTRIC POWER PLANT. Hydrology: - Rainfall, Runoff, Hydro graph, flow duration curve, mass curve. Hydroelectric power plant: - Site selection, classification of hydroelectric power plant, general arrangement, details of different components, turbine selection. Governing. Comparison with other power plant. [CO-2] 	7
4	 POWER PLANT ECONOMICS Load Analysis - Fluctuating Load on power plants, Load curves, various terms & definition, peak load, effect of fluctuating load. Economic Analysis: - Cost of electric energy [CO-3] 	4
5	 NUCLEAR POWER PLANT Introduction to Nuclear Engineering, Global scenario, prominent installations worldwide, present & proposed nuclear plant in India. Nuclear Reactors: - Types of reactors, PWR, BWR, CANDU, Gas cooled, liquid metal cooled, Breeder reactor. Operational requirements and difficulties, site selection for location of a nuclear power station Nuclear Waste Disposal. Comparison with other power plant. [CO-4] 	8

VI Semester

OE-IV : ME2394 – Project Evaluation & Management

Objective	Course Outcome
The course focuses on developing complete understanding of formulating a problem/project and finding possible solutions against the given constraints. The overall learning shall resolve project identification evaluating its technical and economic feasibility and developing skills for its planning, and establishing controls. Relevant techniques, writing skills and monitoring methods shall be dealt with in details.	 To apply the concepts of monitoring and evaluation, appraise To analyse the best monitoring methods, appreciate evaluation in the context of developmental project work

Unit No.	Contents	Max. Hrs.
1	Project Identification considering objectives and SWOT analysis, Screening of Project Ideas, Technical, Market, Financial, Socioeconomic and Ecological Appraisal of a project demand forecasting, secondary data, accuracy, confidence level, uncertainty	7
2	Technical feasibility : Process selection, Level of automation, plant capacity, acquiring technology, Appropriate technology plant location, Equipment selection & procurement, Govt. policies. Value analysis and project evaluation:	7
3	Economic feasibility: Cost of Project, working capital analysis, fixed cost, means of finance, estimation of sales & production price analysis, Breakeven point, Projected cash flow statements, projected balance sheet, projected profit & loss statement, projected cash flow, rate of return, Discounted payback period, cost benefit analysis, return after taxes.	9
4	Project Planning and Control: Work break down structure and network development. Basic Scheduling, Critical Path and four kinds of floats. Scheduling under probabilistic durations, Time Cost tradeoffs, CPM, PERT, Optimum project duration, resource allocation, updating	7
5	Project report: Preparation of project report, risk analysis, sensitivity analysis, methods of raising capital	7
6	Initial review, performance analysis, ratio analysis, sickness, project revival, Project Monitoring with PERT/Cost, Organizational aspects, Computer packages and Project Completion environ-mental & social aspects.	8

MECHANICAL ENGINEERING

VII Semester

ME2401 - Automation in Production systems

Objective	Course Outcome				
	Students will have				
To develop in the engineering students the ability to analyze any engineering problem in a simple and logical manner and to apply to its solution a few, well understood basic principles.	using line balancing.				

Unit-1

[7 hrs]

Automation- Definition, types, reasons for automating, arguments for and against automation. Types of production, functions in manufacturing, Automated Flow Lines - Buffer storage. Analysis of flow lines- General terminology and analysis, analysis of transfer lines without storage, partial automation, and automated flow lines with storage buffers, manual assembly lines. Line Balancing Problem, Methods of line balancing. Automated Assembly Systems- Types, parts delivery system , Throughput analysis for line balancing , Introduction to Simulation software's .SIMUL8.WITNESS for line balancing

Unit-2

[8 hrs]

Numerical Control Production Systems- Basic concepts coordinate system and machine motion- Types of NC systems- Point to point, straight cut and continuous path. Machine control unit and other components, Tape and tape readers.

NC part programming- word address format, methods of part programming, Computer numerical control, manual part programming: APT programming, Direct numerical control.. Adaptive control. Applications of CNC. CAM software's ,Post -processing in CAM

Unit-3

Industrial Robotics- Introduction, robot anatomy, robot control systems, accuracy and repeatability and other specifications, end effectors, sensors, introduction to robot programming, Robot applications- Characteristics of robot applications, work cell layout, robot applications in material handling, processing, assembly and inspection. Introduction of DH notations ,Robot simulation softwares

Unit-4

[7 hrs]

[8 hrs]

Automated material handling & storage-Conveyor systems: Automated Guided Vehicle Systems -

Types: - Driverless trains, AGVS pallet trucks, AGVS unit-load carriers. Vehicle guidance & Routing, Traffic control & safety, System management, Analysis of AGVS systems, AGVS applications. AGVS industrial case studies Automated Storage & Retrieval System -

Types :- Unit load AS/RS, mini load AS/I{S, man on board AS/RS, automated item retrieval system, deep lane AS/RS -Basic components & special features of AS/RS, Carousel storage systems, Work in process storage, quantitative analysis. AS/RS industrial case studies Unit-5

[7 hrs]

Automated inspection & Group technology: - Automated inspection principles & methods -100% automated inspection, off -line & on -line inspection, distributed inspection & final inspection; Sensor technologies for automated inspection, coordinate measuring machines -constructional, operation & benefits; Machine vision image acquisition & digitization, image processing & analysis, interpretation, machine vision applications; Other optical inspection methods -Scanning laser systems , linear allay devices, optical triangulation techniques. Introduction to Group Technology. GT classification, GT Coding system, PFA, GT interface for FMS, GT industrial case studies

MECHANICAL ENGINEERING

VII Semester ME2401 - Automation in Production systems

Unit 6 [7 hrs] Computer aided manufacturing: -Manufacturing planning, manufacturing control ; Computer integrated manufacturing; Flexible manufacturing systems -Components, Types of systems, FMS layout configuration computer functions, data files, system reports, FMS benefits. Desiginig FMS system ,Case studies of FMS Computer aided process planning: Retrieval CAPP systems, generative CAPP systems, benefits of CAPP. Shop floor control. CAPP software's ,CAPP industrial case studies

MECHANICAL ENGINEERING

ME2402 – Lab: Automation in Production systems

Objective	Course Outcome
To develop in the engineering students the ability to analyze any engineering problem in a simple and logical manner and to apply to its solution a few, well understood basic principles	 The Students will be able to (I) Designing, experimentation and evaluation of CNC programs. (II) Designing and justifying robot programming for industrial applications. (III) Transform manual GT cell to build FMS. (IV) Evaluate and justify use of automated material handling and inspection for building automated industries.

Practicals:

- 1) Practice Programming on Manual Part Program , Drilling , Milling
- 2) Performance, Simulation on CNC milling with Siemens 828D controller (atleast two Complex Geometries)
- 3) Performance, Simulation on lathe with Siemens 828D controller (at-least two Complex Geometric)

VII Semester ME2411- PE-II: Tool Design

COURSE OBJECTIVES:	Course Outcome						
machining, production, inspection, press working and forging.	CO I: Student will be able to explain the fundamentals of Tool DesignCO II: Design various cutting tools, Sheet Metal Dies,						
 To learn the procedure of design and manufacturing of tools 	Jigs / Fixtures and Forging dies CO III: Evaluate the failure modes of tools and costing CO IV: Compose planning for manufacturing of tools for various components						

Unit1

[8 Hrs]

Design of single Point Cutting Tool, Theory of metal Cutting Introduction, Mechanics of chip formation, Cutting tool materials, Single point cutting tool, Designation of cutting tools, ASA system, Importance of Tool angles, Orthogonal rake system, Classification of cutting tools, Types of chips, determination of shear angle, velocity relationship, force relations, Merchant's Theory, Cutting power, Energy consideration in metal cutting, Tool wear, Tool life, Tool life criteria, variable affecting tool life, Machine ability [1,3, 5,6,9,11,12]

Unit2

[8hrs]

Form tools- Introduction, Types, design of form tools. Drills- Introduction, Types, Geometry, Design of drill. Milling cutters - Introduction, Types, Geometry, and Design of milling cutters. [1,3,5,6,9,11,12]

Unit3

Press tool Design

[10hrs]

Introduction, Press operations - Blanking, piercing, Notching, Perforating, Trimming, Shaving, Slitting, Lancing, Nibbling, Bending, Drawing, Squeezing. Press working equipment - Classification, Rating of a press, Press tool Equipment, arrangement of guide posts. Press selection, press working

\Terminology, Working of a cutting die, Types of dies - Simple dies, inverted die, Compound dies, combination dies, progressive dies, Transfer dies, multiple dies Principle of metal cutting, strip layout, clearance, angular clearance, clearance after considering elastic recovery, cutting forces, method of reducing cutting forces, Die block, Die block thickness, Die opening, Fastening of die block, back up plate, Punch, Methods of holding punches, Strippers. Stoppers, Stock stop, Stock guide, Knockouts, Pilots. Blanking & Piercing die design - Single & progressive dies. [1,3, 5,6,9,11,12]

Unit4

[10hrs] Bending Forming & Drawing dies Bending methods - Bending Terminology, V- Bending, Air bending, bottoming dies, spring back & its prevention. Design Principles - Bend radius, Bend allowance, Spanking, width of die opening, Bending pressure. Metal flow during drawing, Design, Design consideration - Radius of draw die, Punch radius, Draw clearance, Drawing speed, Calculating blank size, Number of draws, Drawing pressure, Blank

holding pressure.[1,3, 5,6,9,11,12]

Unit5

[7 Hrs]

Forging Die Design: Introduction, Classification of forging dies, Single impression dies, Multiple Impression dies. Forging design factors - Draft, fillet & corner radius, parting line, shrinkage & die wear, mismatch, finish allowances, webs & ribs Preliminary forging operation - fullering, edging, bending, drawing, flattering, blacking finishing, cutoff. Die design for machine forging - determination of stock size in closed & open die forging. Tools for flash trimming & hole piercing, materials & manufacture of forging dies.[1,3, 5,6,9,11,12]

MECHANICAL ENGINEERING

Unit6

[10 Hrs]

Design of jigs & fixture: - Introduction, locating & clamping - principle of location, principle of pin location, locating devices, radial or angular location, V - location, bush location. Design principle for location purpose, principle for clamping purposes, clamping devices, design principles common to jigs & fixtures. Drilling Jigs: - Design principles, drill bushes, design principles for drill bushings, Types of drilling jigs - Template jig, plate type jig, open type jig, swinging leaf jig, Box type jig, channel type jig. Jig feet. Milling Fixtures: - Essential features of a milling fixtures, milling machine vice, Design principles for milling fixtures, Indexing jig & fixtures, Automatic clamping Devices. [1,3,5,6,9,11,12]

VII Semester ME2412– PE-II : Additive manufacturing

Objective: The main objective of this course is to acquaint students with the concept of AM, various AM technologies, selection of materials for AM, modeling of AM processes, and their applications in various fields.

UNIT	Hrs.
Unit 1 Introduction to Additive Manufacturing (AM)	[7Hrs]
General overview Introduction to reverse engineering Traditional manufacturing vis AM Computer aided	
design (CAD) and manufacturing (CAM) and AM Different AM processes and relevant process physics	
AM process chain Application level: Direct processes - Rapid Prototyping, Rapid Tooling. Rapid	
Manufacturing; Indirect Processes - Indirect Prototyping. Indirect Tooling, Indirect Manufacturing	
Unit 2 Materials science for AM	[7Hrs]
Discussion on different materials used Use of multiple materials, multifunctional and graded materials in	
AM Role of solidification rate Evolution of non-equilibrium structure property relationship Grain structure	
and microstructure.	
Unit 3 AM technologies	[12Hrs]
Powder-based AM processes involving sintering and melting (selective laser sintering, shaping, and	
electron beam melting. involvement). Printing processes (droplet based 3D Solid-based AM processes	
- extrusion based fused deposition modeling object Stereo lithography Micro- and Nano-additive.	
Unit4 Mathematical Model for AM	[40]
Transport phenomena models: temperature, fluid flow and composition, buoyancy driven tension driven	[13Hrs]
free surface flow pool) Case studies: Numerical Modeling of AM process, Powder bed melting based	
process, Droplet based printing process Residual stress, part fabrication time, cost, optimal orientation	
and optimal Defect in AM and role of transport Simulations (choice of parameter, Mo de! validation for	
different)	
Unit5 Process selection, planning, control for AM	[7Hrs]
Selection of AM technologies using decision methods, Additive manufacturing process plan: strategies	
and post processing. Monitoring and control of defects, transformation	
UNIT-6:	[8 bro]
Powder Metallurgy: Powder manufacture and Conditioning, Production of Sintered Structural	hrs]
Components, Self-lubricating bearing, Cemented Carbides, Ceramics, Sintered Carbide cutting tools.

MECHANICAL ENGINEERING

VII Semester ME2413– PE-II : Fuel Cell Technology

OBJECTIVES	OUTCOMES
 Provide thorough understanding of performance characteristics of fuel cell power plant and its components Outline the performance and design characteristics and operating issues for various fuel cells The students will have sufficient knowledge for working in a fuel cell industry or R&D organization 	 By the conclusion of this course, each student should : Have thorough understanding of performance behaviour, operational issues and challenges for all major types of fuel cells. Apply know-how of thermodynamics, electrochemistry, heat transfer, and fluid mechanics principles to design and analysis of this emerging technology. Apply techniques, skills, and modern engineering tools necessary for design and analysis of innovative fuel cell systems. Develop enough skills to design systems or components of fuel cells.

Unit I: Introduction to Fuel Cells

Brief history of fuel cells, Operating principles, Types of fuel cells- Solid Oxide Fuel Cell (SOFC), Alkaline Fuel Cell (AFC), Molten Carbonate Fuel Cell (MCFC), Phosphoric Acid Fuel Cell (PAFC), Fuel Cell Stack, Advantages, Limitations and Applications of Fuel Cell, Polarization curve for performance characterization of fuel cells, Representing various losses (Activation, Ohmic, concentration loss), Hydrogen Production, Storage and Transportation.

Unit II: Fuel Cell Thermodynamics

Heat Potential (Enthalpy of Reaction), Work Potential (Gibbs free energy), Reversible fuel cell voltage (Nernst equation), Fuel Cell Efficiency.

Unit III: Fuel Cell Electrochemistry

Electrochemical Reaction Basics, Faraday's law, Tafel equation, Butler - Volmer equation, Exchange Current.

Unit IV: Fuel Cell Charge Transport and Mass Transport

Ion Transport (Electrolyte), Electron Transport, Gas phase (single phase) mass transport in different fuel cell components (Diffusion layer, flow channels), Multiphase Mass Transport in fuel cell components, Fuel Crossover and Internal Currents, Heat generation and transport in fuel cell.

Unit V: Fuel Cell Characterization

In Situ Versus Ex Situ Characterization, Polarization Test, Electrochemical Impedance Spectroscopy, Linear Sweep Voltammetry, Cyclic Voltammetry, Current Interrupt, High frequency resistance.

Unit VI: Polymer Electrolyte Membrane Fuel Cell (PEMFC)

\Components and Materials: Membrane, Catalyst Layer, Bipolar Plate, Current Collector, Water Management, Thermal Management, Direct Liquid Fuel Cell (DLFC), Advantage of Liquid Fuel over Gaseous Fuel, Different types of DLFC, Direct Methanol Fuel Cell (DMFC).

MECHANICAL ENGINEERING

VII Semester

ME2414– PE-II : Refrigeration and Air Conditioning

principle of Reingeration and Air conditioning	The student will be able to understand and determine various psychrometric properties of air, analyze various psychrometric process and will be able to apply it to live problems The students will be able to design air distribution system The student will be able to analyze various types of VCRS refrigeration systems The students will also have brief knowledge of non VCRS refrigeration systems & cryogenic systems

Unit 1

PSYCHROMETRY: Introduction, psychometric properties of air, psychometric chart, psychometric processes bypass factor, apparatus dew point temperature.

HUMAN COMFORT: Mechanism of body heat losses, factors affecting human comfort, effective temperature, comfort chart. [CO-1]

Unit 2

ADVANCED PSYCHROMETRY: Application of psychrometry to various air-conditioning systems. RSHF, GSHF,

ESHF, air washers, air coolers.

HEAT LOAD CALCULATIONS: Data collection for load calculation. Various components of heat load estimate. Methods of cooling load calculation. Demonstration of air conditioning systems to students. [CO-1]

Unit 3

AIR TRANSMISSION & DISTRIBUTION:

Principle of air distribution, types of grills & diffusers & their selection criteria, air alteration, types of air filters, distribution of air through ducts, pressure losses in ducts, methods of duct design, duct friction chart, air conditioning controls. [CO-2]

Unit 4

REFRIGERATION: Introduction, Definition, Applications.

[8 Hrs.]

[7 Hrs]

[7 Hrs]

[8 Hrs]

Study of simple vapour compression refrigeration system.

Analysis of simple vapour compression refrigeration system, effect of sub cooling, superheating, polytropic compression & pressure drops on the performance of the system. Demonstration of performance of VCRS to students. **[CO-4]**

MECHANICAL ENGINEERING

Unit 5

MULTISTAGE VAPOUR COMPRESSION REFRIGERATION SYSTEMS:

Multiple compressor & multiple evaporator systems, cascade refrigeration systems. Study of equipments such as compressors, evaporators, expansion devices & controls defrosting methods (types & principle only). Testing & charging of refrigeration systems. Demonstration of of above equipments to students.

REFEGERANTS:

Nomenclature of refrigerants, refrigerant properties, mixture refrigerants, global warming potential & Ozone depletion potential, Montreal & Kyoto protocol, alternate refrigerants. **[CO-4]**

Unit 6.

[7 Hrs]

[8 Hrs]

STUDY OF VAPOUR ABSORPTION REFRIGERATION SYSTEM:

Introduction Ammonia-Water, Lithium bromide-water systems, three fluid refrigerators.

OTHER REFRIGERATION TECHNIQUES:

Air cycle refrigeration, Applications in air refrigeration systems, Vortex tube, and thermoelectric refrigeration. CRYOGENICS:

Introduction, Application of cryogenics, Joule- Thomson coefficient, inversion curve, methods of liquefaction of air **[CO-4]**

MECHANICAL ENGINEERING

VII Semester ME2415- PE-II : Material Handling System

Objective	Course Outcome
To develop the awareness about principles and practices of material handling equipments. Study the different components design and applications of material handling devices.[c,e]	 Students will be able to: Explain the various typs of Material handling systems. Design the various rope and chain assisted material handling systems. Explin various attachments, drives and safety components of material handling system. Analyze and select various material handling systems for different material handling situations.

Unit1

Types of intraplant transporting facility, principles of material handling and classification of material handling equipments, selection of material handling equipment, hoisting equipment, screw type, hydraulic and pneumatic conveyors, general characteristics of hoisting machines, surface and overhead equipments, general characteristics of surface and overhead equipments and their applications. Introduction to control of hoisting equipments.

Unit2

[8 Hrs] Component selection and design Flexible hoisting appliances like ropes and chains, welded load chains, roller chains, selection of chains, hemp rope and steel wire rope, selection of ropes, rope reeving arrangement and pulley blocks fastening of chains and ropes, different types of load suspension appliances, fixed and movable pulleys, different types of pulley systems, multiple pulley systems. Chain and ropes heaves and sprockets.

Unit3

[7 Hrs]

[8 Hrs]

[8 Hrs]

Load handling attachments, standard forged hook, hook weights, hook bearings, cross piece and casing of hook, crane grab for unit and piece loads, carrier beams and clamps, load platforms and side dump buckets, Electromagnetic lifting system, grabbing attachments for loose materials, crane attachments for handling liquid materials.

Unit 4

[8 Hrs] Arresting gear, ratchet type arresting gear, roller ratchet, shoe brakes and its different types like electromagnetic, double shoe type, thrusters operated, controlled brakes, shoe brakes, Electro-Hydraulic thrusters safety handles, load operated constant force and variable force brakes, Rope drum design and assembly, design of guides and column,

Unit5

Different drives of hoisting gears like individual and common motor drive for several mechanisms, travelling gear, travelling mechanisms for moving trolleys and cranes on runway rails, mechanisms for trackless, rubber-tyre and crawler cranes, motor propelled trolley hoists and trolleys, rails and travelling wheels, slewing, jib and lifting gears. Operation of hoisting gear during transient motion, selecting the motor rating and determining braking torque for hoisting mechanisms, selecting the motor rating and determining braking torque for travelling mechanisms, slewing mechanisms, jib and lifting mechanisms. (Elementary treatment is expected)

MECHANICAL ENGINEERING

[7 Hrs]

Unit6

Cranes with rotary pillar, cranes with a fixed post, jib cranes with trolley, portal cranes with luffmg boom, cantilever cranes, cage elevators, safety devices of elevators, belt and chain conveyors and their power calculations, vibrating and oscillating conveyors, pneumatic and hydraulic conveyors, screw conveyors, hoppers, gates and feeders. Introduction to AGV's as new material handling device, use of robot for material handling.

MECHANICAL ENGINEERING

VII Semester ME2416- PE-II : Reliability Engineering

Objective	Course Outcome
1.To develop in the engineering students the ability to analyze any engineering problem in a simple and logical manner and to apply a few well	 (I) Student will be able to use reliability modeling as a tool for evaluating system performance.
understood basic principles to find its solution.	 (II) Student will be able to analyze the failure of a machine, determine the failure rate of systems or components.
2.Learn how to get higher operating plant and equipment reliability that lifts efficiency and output of operating assets, stops equipment failures and creates higher plant and equipment reliability, with this subject.	(III) Student will able to understand importance of the maintenance of engineering systems and factors affecting maintainability.
	(IV) Student will be able to prepare the production & maintenance schedule of particular engineering system.

Unit	Contents							
1	Fundamental concepts:- Reliability definitions, failure, Failure density, Failure Rate, Hazard Rate, Mean Time To Failure, MTBF, maintainability, availability, safety and reliability, Quality, cost and system effectiveness, Life characteristic phases, modes of failure, Quality and reliability assurance rules, product liability, Importance of Reliability,							
2	Probability theory:- Set theory, laws of probability, total probability theorem, probability distributions, parameters and applications.							
3	System reliability and modeling: Series and parallel components, mixed configuration, complex systems. Redundancy, element redundancy, unit redundancy, standby redundancy. Types of stand by redundancy, parallel components. Markov models for reliability estimation.							
4	Maintainability and Availability: Objectives of maintenance, types of maintenance, Maintainability, factors affecting maintainability, system down time. Availability - Inherent, Achieved and Operational availability, reliability and maintainability trade-off. Markov models for availability estimation.							
5	System reliabilit Reliability alloc	ty Analysis: ation or apportionment. R	eliability apportionn	nent techniques . R	eliability block	7		
6	diagrams and models. Reliability predictions. Life testing and accelerated testing.Strength based reliability:Safety factor, safety margin, Stress strength interaction, Failure Mode, Effects and CriticalityAnalysis-, , FMECA examples, Ishikawa diagram .fault tree construction, basic symbolsdevelopment of functional reliability block diagram, Fault tree analysis, fault tree evaluationtechniques, Design of Mechanical components and systems:-Material strengths and loads.

VII Semester

ME2417– PE-II : Advanced Manufacturing Techniques

Objective	Course Outcome
To develop the ability to understand & analyze different	Upon successful completion of the course, the student
advanced manufacturing processes and different	will be able to:
advanced manufacturing machines.	CO I- Distinguish the various non-traditional
(a,c,k)	manufacturing process based on energy
	sources.
	CO II Evaluate various advanced manufacturing
	process for new materials and the
	requirements of complex features on the basis
	of various parameters.
	CO III- Justify the various advanced welding
	techniques for different applications.
	CO IV- Evaluate the application of additive
	manufacturing advanced manufacturing
	techniques in industries.

Unit 1

[8hrs]

Mechanical Processes: Need, classification of AMT, Abrasive jet Machining, Water jet Machining & ultrasonic Machining, Abrasive-Water Jet Machining, Abrasive Flow Machining, Magnetic Abrasive Finishing & Ultrasonic Machining. (CO I)

Unit 2

[6 hrs]

Chemical Processes & Electro-chemical Processes: Electrochemistry of ECM, tool design, effect of variable on performance chemical milling, Chemical Engraving, Photo chemical machining, EC grinding. (CO II)

Unit 3

[9 hrs]

[6hrs]

[8 hrs]

[7 hrs]

Thermo-electric Processes:Electric Discharge Machining, Wire Electric Discharge Machining.Electron BeamMachining, Laser Beam Machining, Ion Beam Machining & Plasma Arc Machining.(CO II)

Unit 4

High energy rate forming processes: Burnishing, ballizing process and other miscellaneous forming processes, electroforming. Thermoform High velocity forming, Vacuum forming. (CO II)

Unit 5

Unconventional welding techniques: laser, electron beam, plasma arc, atomic hydrogen, submerged arc, explosive welding techniques, solid phase welding, technique such as ultrasonic welding, friction welding.(CO III).

Unit 6

Additive Manufacturing: Overview, Basic principle need and advantages of additive manufacturing, Procedure of product development in additive manufacturing, Classification of additive manufacturing processes, Materials used in additive manufacturing, Challenges in Additive Manufacturing.(CO IV)

VII Semester ME2418– PE-II : Optimization Techniques

Objective	Course Outcome
	After completion of this course, Students will be able to:
The course aims to develop the most fundamental concepts in the field of optimization The basic principles of linear optimization for decision- making, using practical examples will help us learn to identify decision variables, objective function, and constraints of a problem, and use them to formulate and solve an optimization problem. This course is designed to connect data and models to real world decision-making scenarios in the field of manufacturing, finance, Project management, human resource management through various	
optimization tools which also includes the most recent global optimization. Thus, detailed treatment of various data analysis and handling technique will lead to complete understanding and modeling the processes including its optimization, is envisaged in this course.	

Unit 1:

Introduction to Linear Programming Problems: Formulation of LPP, Geometry of LPP and Graphical Solution of LPP, Simplex Method, Big M- Method, Two Phase Method. (CO-I)

Unit 2:

[7 hrs] Alternative Specifications & Special Cases in Linear Optimization, Modeling & Solving Linear Problems in Excel. (C0-I)

Unit 3: Transportation Problem and Assignment Problem. (CO-II)

[7 hrs]

[7 hrs]

Unit 4:

[7 hrs] Replacement Models: Replacement of Models that deteriorate with time, Concept of equivalence, Interest Rate and Present worth. Replacement of items that fails suddenly considering Individual and Group replacement policy. (CO-IV)

MECHANICAL ENGINEERING

VII Semester ME2421– PE-III: Vibration

Objective	Course Outcome				
To develop in students fundamentals knowledge of vibrations. To familiarize with energy methods for multi degree freedom systems. To impart, knowledge of vibration of continuous systems and applications of factor in vibration analysis. TO impart knowledge of use of FFT in vibration analysis for condition monitoring purpose	 (I) The student will have ability to analyze various types of Vibrations[b,e] (II) The student will have ability to measure Vibrations and carryout its analysis[b,e] 				

Unit 1

[7 hrs] SINGLE DEGREE OF FREEDOM: Free body diagram, free & forced vibration, un damped and damped single degree of freedom systems subjected to harmonic and other periodic excitations. Impulse response, convolution integral and response to arbitrary excitation. Vibration isolation and transmissibility. Solution using Laplace transform, Rungakutta method, structural damping

Unit2

Energy method applied to TWO degree freedom system. Lagranges equation. Generalized mass formulation of mass, damping and stiffness matrix and its numerical solutions. Vibration absorber, conservative and non conservative systems. Geared rotor system, Influence Coefficients and flexibility matrix of bending vibration of beam and multi-disc rotor. Mode shapes and orthogonality principle

Unit3

[8 hrs]

[8 hrs]

[8 hrs]

7 hrs1

Numerical techniques for Multi degree freedom system. systems. Matrix iteration method. Holzer"s method for torsional vibration. Dunkerley's method for critical speed determination of multi disc rotor. Rayleigh quotient sweeping matrix method for determination of all the natural frequencies and mode shapes. Rayleigh Ritz method. Modal matrix and expansion theorem. Free and forced response by modal analysis.

Unit4

Vibration of continuous system. Axial vibration of rod, bending vibration of beam and torsional vibration of shaft. Hamilton's principle and derivation of equation of motion, Rayleigh quotient. Modal co-ordinates and modal forces. Free and forced response through modal analysis.

Unit5

Vibration pickup, seismometers, accelerometer, proximity probe spectrum analyzer, FET & DFT (Discrete FT), torsional, Vibration measurement, Digital vibration measurement, philosophy of vibration. condition monitoring [7 hrs] Unit6

Introduction to Finite element method in vibration of continuous system. Natural frequencies and mode shape computation for simple rod and beam problem

MECHANICAL ENGINEERING

VII Semester ME2422– PE-III : Lab: Vibration

Objective	Course Outcome
To do Experimentation on Types of Vibrations.	Students will be able to:
To do analysis of Vibration of different systems and	1. Analyze the various types of vibrations.
machines using different methods And through Instrument. [b,e]	2. Evaluate vibrations and carry out its analysis.
	 Predict/judge vibration parameters and evaluate through different approaches for multidegree freedom system.
	 Form and work on transformation of matrices for vibration for evaluating frequencies

List of Practical

- 1. To determine transmissibility of single degree freedom system using load cells and exciter
- 2. To Study the Transverse Vibrations of Cantilever Beam and to determine the frequency or period of Vibration (oscillation) theoretically and actually by experiment
- 3. To determine natural frequency of Torsional vibration of geared system
- 4. To Study the forced vibration of equivalent spring mass System
- 5. Study and determination of modes shapes for two degree and three degree freedom systems
- 6. To Study the Free Vibration of two rotor and three rotor System and to determine the natural frequency of vibration theoretically & experimentally.
- 7. To verify the Dunkerley's Rule.
- 8. Determination of Whirling of shaft.
- 9. To study the effect of damping on natural frequency and plot frequency response curves at various damping coefficient.
- 10. To determine vibration parameters (Amplitude Velocity acceleration for machines using FFT
- 11. To diagnose faults in simple machines like pumps motor gearbox using FFT.
- 12. To remove dynamic unbalance using FFT.

MECHANICAL ENGINEERING

VII Semester

ME2423– PE-III : Computer Aided Design & Manufacturing

Objectives:	Course outcomes:		
To educate students on -Main concepts of computer aided design -Graphics representation of curves. -Surface and solids	 After completion of the course students would be able to 1. Distinguish the various CAD CAM tools and also evaluate criteria for CAD CAM systems 2. Design 2D and 3D Transformation matrices 3. Calculate and analyse the parametric equations for wire frame. surface and solid modeling entities 4. Design the applications of modeling and evaluate data exchange formats 		

Unit 1 CAD TOOLS

Definition of CAD Tools, Types of system, CAD/CAM system evaluation Criteria, functional areas of CAD, Modelling and viewing, efficient use of CAD software.

Unit2 Two/Three Dimensional Transformations

Two & Three dimensional geometric and co-ordinate transformations like scaling, translation, rotation, reflection, shear. Concept of homogeneous representation and concatenated transformations. Inverse transformations.

Unit 3 Wire Frame Modeling

Types of mathematical representation of curves, wire frame models, wire frame entities, parametric representation of analytical and synthetic curves- Hermit cubic splines, Bezier curves, B Splines

Unit4 Surface Modeling

Mathematical representation of surfaces, Surface model, Surface entities, surface representation, parametric representation of surfaces, plane surface, ruled surface, surface revolution, Tabulated surface.

Unit 5 Solid Modeling & Data Exchange

Solid Representation - Boundary Representation (B-rep), Constructive Solid Geometry (CSG) and other **methods**, **Evaluation** of data-exchange formats, IGES data representations and structure

Unit 6 Manufacturing

Introduction to NC and CNC, Machine tools- Construction features with structure- Drives and CNC controllers. Manual part programming (Lathe & Milling machines) Introduction of CAM package. Group Technology, Cellular Manufacturing-Composite part concept-Types of Flexibility – FMS – FMS Components, Application and Benefits.

VII Semester

ME2424– PE-III : Lab : Computer Aided Design & Manufacturing

Objectives:	Course outcomes:
To educate Main concepts of computer aided design & Manufacturing	After completion of the course students would be able to
To use Graphics representation of curves	1. Study, design and develop the model for mechanical engineering parts.
	2. Conceptualize & model any machine component
	3. Build the CAD Model and CAM Model for simple machine elements.

List of Practical:-

r	
1.	To study Introduction to CAD software.
2.	To Solve Simple examples of two dimensional transformations
3.	To Solve Simple examples on three dimensional transformations
4.	Programs on 2-D transformations- scaling, rotation, reflection and translation
5.	3-D Wireframe object modeling using any CAD software
6.	Generation of analytical curves using any CAD software
7.	Generation of synthetic curves using any CAD software
8.	Basics of surface modeling using Extrude, Revolve, fill, sweep, variable section sweep commands using any CAD software
9.	Creating fill surfaces, lofted multi-section surfaces, blended surfaces using any CAD software
10.	To generate at least two simple assembly model using any CAD software.

VII Semester ME2425– PE-III : Vehicle Engineering

Objective	Course Outcome	Unit
The main objective of the syllabus to understand basic knowledge about	(1) Student will be able to analyze various systems of Engine, its function including fuel supply, cooling and lubrication system in vehicle. (PO-1,PO-2,PO-13)	1
vehicle systems which are used in the regular vehicle.	(2) Student will be able to describe_various power transmission systems from clutch to wheel in vehicle. (PO-1,PO-2,PO-13)	2,3
The modernization in automobile is also included	(3) Student will be able to evaluate and describe_control systems like steering and brakes in vehicle. (PO-1,PO-2,PO-13)	4
to understand recent trend in the field.	(4) Student will be able to illustrate and describe the necessary electrical and luxurious systems and safety system in vehicle. (PO-1,PO-2,PO-4,PO-13)	5,6

UNIT-1:

[8 hrs]

- Introduction, Automobile history and development and classification. Vehicles layout.
- Various engine system and components
- Introduction to Fuel supply system: for Petrol and Diesel Engine.
- Engine cooling and lubrication systems., UNIT-2:

[8 hrs]

- Resistance to vehicle motion: Air, Road and gradient resistance and power calculation.
- Clutch Necessity, requirements of a clutch system. Types of Clutches: Single & multi plate clutch, Diaphragm clutch and centrifugal clutch.
- Gear box: Necessity of gear box, working principle, Classification: Sliding mesh, constant mesh, synchromesh, synchromesh and Transfer case gear box, Gear Selector mechanism, lubrication and control. Introduction to Automatic Transmission

UNIT-3:

- Transmission system: Propeller shaft, Universal joint, constant velocity joint, Hotchkiss drive, torque tube drive.
- Differential Need and working. Differential lock.
- Rear Axles and Front Axles.
- Wheel and Tyres: tyres specification, factors affecting tyre performance.

UNIT-4:

[8 hrs]

[8 hrs]

- Steering systems, principle of steering, steering linkages, steering geometry and wheel alignment, steering gear box and its types.
- Suspension systems Function, conventional and Independent suspension System, shock absorber
- Brakes Drum and Disc brakes, Comparison, Mechanical, hydraulic (Master and wheel cylinder), Air brakes.
 UNIT-5:
 [8 hrs]
- Electrical systems: Battery construction. Specification. Operation of Batteries. Charging of battery, Alternator.
- Starting system, Battery Ignition and magneto ignition systems, Lighting, Horn, Side indicator, wiper. and other electrical systems.

VII Semester ME2426– PE-III : Lab. Vehicle Engineering

Course Outcome	Unit
(1) Student will be able to analyze various systems of Engine, its	
function including fuel supply, cooling and lubrication system in	1
vehicle. (PO-1,PO-2,PO-13)	
(2) Student will be able to describe_various power transmission systems	2.2
from clutch to wheel in vehicle. (PO-1,PO-2,PO-13)	2,3
(3) Student will be able to evaluate and describe_control systems like	4
steering and brakes in vehicle. (PO-1,PO-2,PO-13)	4
(4) Student will be able to illustrate and describe the necessary	
electrical and luxurious systems and safety system in vehicle.	5,6
(PO-1,PO-2,PO-4,PO-13)	
	 Student will be able to analyze various systems of Engine, its function including fuel supply, cooling and lubrication system in vehicle. (PO-1,PO-2,PO-13) Student will be able to describe_various power transmission systems from clutch to wheel in vehicle. (PO-1,PO-2,PO-13) Student will be able to evaluate and describe_control systems like steering and brakes in vehicle. (PO-1,PO-2,PO-13) Student will be able to illustrate and describe the necessary electrical and luxurious systems and safety system in vehicle.

List of Practical: Minimum eight practical to be conducted

- 1. Demonstration to understand vehicle layout and important constituents of four wheel ,two-wheel & fourwheel drive vehicle
- 2. Demonstration to understand various components and working of 2S & 4S Engine.
- 3. Demonstration to understand working of single plate/Multiplayer/Diaphragm automobile clutch.
- 4. Demonstration of synchromesh gearbox with gear shifting mechanism.
- 5. Demonstration of final drive and differential.
- 6. Demonstration of working Hydraulic braking system and comparison with other braking system.
- 7. Demonstration to understand front wheel steering geometry and steering mechanism.
- 8. Demonstration to understand suspension system and working of shock absorber.
- 9. Demonstration of various components of battery and working of its charging system.
- 10. Demonstration of vehicle starting system(Kick start and Self-start).
- 11. Demonstration to understand working principle of Electric horn, Brake light and side indicator.
- 12. Visit to workshop to understand wheel balancing.
- 13. Visit to servicing station for vehicle maintenance, repairs and report.

MECHANICAL ENGINEERING

VII Semester

ME2427– PE-III : Solar Energy & Utilization

Objective	Course Outcome

Unit1 Basics of solar energy

Brief History of solar energy &utilization, Various approaches of utilizing solar energy, Blackbody radiation, Relation between radiation field energy density and radiation spectrum, Planck's formula in energy unit, Maximum spectral density, Planck's formula in wavelength unit, Wien displacement law, Stefan - Boltzmann law, Photoelectric effect, Einstein's theory of photons, Einstein's derivation of the black-body formula.

Unit2 Solar radiation, measurement and estimation

History of solar energy utilization, basic definitions, Solar radiation and modeling, Empirical equations for predicting the availability of solar radiation, Measurement of global, direct and diffuse radiation, Radiation computations on inclined surfaces, Angstrom's turbidity, Solar chart, Standard radiation scale, Measurement of solar radiation, Solar energy measuring instruments, Pyranometer, Pyrheliometer, Sunshine recorder, Estimation of average solar radiation, Ratio of beam and total radiation on tilted surface of that on horizontal surface.

<u>Unit3</u> Concentration of solar energy

Three types of imaging optics: trough or linear collectors, central receiver with heliostats, and parabolic dish concentrator with on -axis tracking, Solar thermal electricity is using Stirling engine or Ranking engine, Solar photovoltaic with concentration.

Unit4 Solar Thermal systems:

Liquid Flat, Plate collector, air heater and concentrating collector, Solar pond, Solar distillation, Solar drying. Thermal storage. Solar Passive Architecture Passive heating and cooling of Buildings. Solar Cooking, Distillation, Desalination, Solar Drying, Solar Chimney.

Unit5 Solar cells:

Formation of a PN-junction, Space charge and internal field, Quasi - Fermi levels, The Shockley diode equation, Structure of a solar cell, The solar cell equation, Fill factor and maximum power, Various electron, hole-pair recombination mechanisms, Crystalline silicon solar cells, Thin film solar cells: CIGS, Cite and silicon - Tandem solar cells, Dye - sensitized solar cells, Organic solar cells. Photovoltaic applications: battery charger, domestic lighting, street lighting, water pumping etc., solar PV power plant, Net metering concept.

Unit6 Storage of solar energy:

Types of Energy Storage, Thermal Storage, Simple water and rock bed storage, pressurized water storage system, Electrical Storage, Fundamental concept of batteries, measuring of battery performance, charging and discharging of a battery, storage density, energy density, and safety issues. Types of batteries, Chemical Storage, Fuel Cell, History of Fuel cell, Principles of Electrochemical storage, Types, Hydrogen oxygen cells, Hydrogen air cell, Hydrocarbon air cell, alkaline fuel cell, detailed analysis, advantage and drawback of each type, hydro-

VII Semester ME2429- PE-III : CNC and Robotics

Objective	Course Outcome			
To understand the need and process of automation in	Students will be able to:			
industry. Study the Computer Numerically Controlled	1. Explain the structure of NC, CNC and DNC			
machines and Robots, their components, functions, functions, programming and applications.[k,m]	 Design the tooling of CNC and compose program for CNC. 			
	3. Explain the structure and kinematics of Robot.			
	 Explain the various grippers and sensors, deign the applications and compose the program for Robot. 			

Unit 1	nit 1 [7 hrs]						
Concepts of NC, CNC, DNC. Classification of CNC machines, MCU architecture and functionality, Machine							
configurations, Types of control, CNC controller's characteristics, Interpolators.							
Unit 2	Unit 2 [8 hrs]						
Qualified, semi qualifi	Qualified, semi qualified and preset tooling, tooling system for Machining centre and Turning centre, work holding						
devices, of CNC Mach	nines.						
Programming CNC r	nachines, Part print analy	ysis and Process p	lanning, Advanced	Programming features,			
Canned cycles. APT part programming CAD/CAM, Parametric Programming.[
Unit 3 [8 hrs]							
Manual part programm	ning for CNC turning, millin	ig and machining cei	nter. Wire EDM mac	hines. Computer assisted			
part programming tee	chniques, Conversational	and Graphics based	d software, Solid b	based part programming.			
Freeform surface ma	chining. Simulation and V	erification of CNC p	orograms, Adaptive	CNC control techniques.			
Integration of CNC ma	achines for CIM.						
Unit 4	Unit 4 [7 hrs]						
Robotics, Basic concepts , Robot configurations , Basic robot motions , Types of drives , Applications							
Transformations and kinematics, Vector operations, Translational transformations and Rotational transformations							
Properties of transformation matrices,							
Homogeneous transformations and Manipulator, Forward solution, Inverse solution, Introduction to robot							
dynamics.							
Controls, Control system concepts, Analysis, control of joints, Adaptive and optimal control.

MECHANICAL ENGINEERING

VII Semester ME2433– PE-III : Piping Design and Engineering

Objective	Course Outcome				
 The student should be able to acquire elementary knowledge of Piping Design and Engineering. To impart the knowledge on selection of components for piping design To impart the knowledge about selection of equipment for piping design To impart basic knowledge on piping Engineering flow diagram and process system To impart basic knowledge to Designing & engineering of Piping Diagram To impart knowledge on ASME Engineering and pressure design 	 After completion of this course, Students will be able to Describe the basic concepts of Piping design and Engineering Apply the basic concepts involved in selection of components and equipment in piping design. Apply the knowledge of design and engineering for preparation of process diagram and piping diagram Describe the application of international standards for piping design 				

<u>Unit 1</u>

Fundamentals of Piping Design and Engineering

Introduction to piping designing & engineering, Evolution of piping, Manufacturing methods, Piping materials and selection, Pipe dimensioning, Schedule numbers, Common piping abbreviations, Major organizations for standards, Commonly American code in piping ASME/ANSI, Common abbreviations. **[CO-1]**

<u>Unit 2</u>

Basic Piping components

Type of Fittings - elbows, weld tee, stub in, couplings, reducers, weld cap, screwed and socket welded fittings, Pipe nipples, flanged fittings and use of fittings, Type Flange -Types, P-T ratings and facings, Gaskets, bolts and nuts, Major Valves - Types, Materials operations, applicability, codes and specifications. **[CO-2]**

Unit 3

Piping Equipment

Horizontal vessels/accumulators, fractionation columns, pumps, heat exchangers, re-boiler, air cooled heat exchanger, cooling towers, heaters/boilers, storage tanks, fractional distillation process and vendor data drawings, Prepare layout of Different type lights.**[CO-2]**

<u>Unit 4</u>

Piping Engineering flow diagram and process system

Uses of flow diagrams, process flow diagrams, mechanical flow diagrams, utility flow diagrams, piping symbols, line symbols, valve symbols, piping isometrics, general arrangement drawings- sections/elevations/ detail drawings, plot plan procedures, Purpose of P&ID'S, study of P&ID'S, stages of development of P&ID'S, symbols usage according to industrial practices, Purpose of P&ID in process industrial/plants. **[CO-3]**

MECHANICAL ENGINEERING

Unit 5

Designing & engineering of Piping Diagram

Plant Co-ordinate Systems, Site Plans, Unit Plot Plan, Equipment Location Drawing, Foundation Location Drawing, Pipe Rack Spacing, Drawing pipe in the rack, pipe insulation shoes, pipe guides, field supports, dummy supports, hanger rods, spring hangers, pick-up pipe supports, plant utilities, control valve manifolds, utility stations, sewer and underground piping system. [CO-3]

Unit 6

ASME Engineering and pressure design

Pipe wall thickness calculations, operating pressure, design pressure, operating & design temperature ,max allowable operating pressure, Pressure design of Pipe, elbows, mitre bends, reinforcement pad calculation for branch connections, flanges, blanks, expansion joints and gaskets. [CO-4]

VII Semester
ME2435– PE-III : Earthmoving Equipments

Ob	ojective	Course Outcome				
1.	To introduce and understand the simple Hydraulic power systems and to realize its importance in the world of power transmission.	Students will be able to: (I) To understand and apply fluid power laws principles	and			
2.	To study various fluids, filters and seals for hydraulic systems	(II) Students will be able to understand the fluid power hardware system components.	basic			
3.	To study various components of fluid power systems.	(III) Students will be able to interpret and hydraulics and electronic system circuits.	draw			
4.	To understand symbols associated with Hydraulic circuits and Electronic circuitd.	 (IV) Students will be able to design, analyze, maintain, carryout troubleshooting, and esta 				
5.	To understand Electronics diagnostic and Computer Aided Diagnostic systems.	safety procedures of Earthmoving equipmen	its.			
6.	Maintenance, troubleshooting and safety practices for Earthmoving equipments.					

Unit 1 : Introduction

Earthmoving equipments: Introduction, Types and applications.

Hydraulic systems: Components, advantages, applications in the field of Earthmoving Equipments. Seals, sealing materials, selection of seals.

Filters, strainers, sources of contamination of fluid & its control.

Hoses & Pipes: Types, materials, pressure drop in hoses/pipes, valves and fittings. Hydraulic piping connections. Types of Hydraulic fluid petroleum based, synthetic & water based. Properties of fluids. Selection of fluids, additives, effect of temperature & pressure on hydraulic fluids.

Unit 2 : Mechanical Systems:

[7 hrs] Super Structure : Cabin:- dashboard , drive controls and hydraulic controls. Boom, arm and related components. Under Carriage: Transmission system: drive system, hydraulic systems for earthmoving, Turning system. Gear box and related components.

Attachments : Buckets: Backacter, cam shelve, screening adapter, special buckets.

End effectors: Earthwork attachments, drilling and boring attachment, piling attachment, crusher adapters, breakers, jaws, grabbing and loading attachments.

Unit 3 : Hydraulic Systems:

Pumps: Types, classification, principle of working & constructional details of vane pump, gear pumps, radial & axial plunger pumps, power and efficiency calculations, characteristic Curves, selection of pumps for hydraulic power transmission.

Accumulators & Intensifiers: Types & functions of accumulators & intensifiers, applications, selection & design procedure.

Unit 4 : Hydraulic Systems :

Valves: Types & functions of valves, applications, selection

Actuators: Linear & Rotary actuators.

Hydraulic motors: Types, vane, gear piston, radial piston. Hydraulic motor performance.

Hydraulic Cylinders: Types of cylinder & mountings, calculations of piston velocity, thrust under static & dynamic applications. Design consideration for cylinders.

Hydraulic Circuits: JIC symbols / ISO Symbols for hydraulic circuits

Different hydraulic circuits used in Construction equipments. Hydraulic circuit analysis

Unit 5 : Electrical and Electronics System:
Basic electrical components switches, cables, colour coding c

Basic electrical components switches, cables, colour coding of cables, Relays,. The basic connections – series and parallel circuits. Electric circuits of earthmoving equipments.. Electronics Circuits: Symbols for Electronics circuits Different Electronics circuits used in earthmoving equipments. Electronics circuit analysis

Unit 6 : Maintenance of Earthmoving Equipments:

Preventive, predictive & breakdown maintenance. Trouble shooting & safety precautions. Electronics diagnostic and Computer Aided Diagnostic systems.

MECHANICAL ENGINEERING

VII Semester ME2441– PE IV : Sysnthesis of Mechanism

Objective	Course Outcome
To make the students understand various types of mechanisms and criterion used in their selection. To give detailed knowledge of type, number and dimensional synthesis of mechanisms. To introduce various graphical and analytical methods so as to enable students to design the mechanisms to meet kinematic needs. Introducing various optimization techniques for synthesis.	generation, path generation and motion generation.

Unit 1

Introduction to kinematics, types of mechanism, kinematics synthesis, science of relative motion, tasks of kinematic synthesis with practical applications, Degree of freedom, class-I, class-II chain, Harding's notation, Grashof criterion, Grubler's criterion.

Unit 2

Introduction to position generation problem, concept of pole, two &three position generation synthesis, pole triangle, Relationship between moving & fixed pivots, Four position generation, opposite pole quadrilateral, center point &circle point curve, Burmester's point. Matrix method for position generation problem, rotation matrix, displacement matrix.

Unit 3

Introduction to function generation problem, co-ordination of input-output link motion, relative pole technique, inversion technique, overlay technique, graphical synthesis of quick return mechanisms for optimum transmission angle. Types of errors, accuracy points, cheby sher's spacing, frudenstein's equation with problems.

Unit 4

Introduction to path generation problem, synthesis for path generation with and without prescribed timing using graphical method. Coupler curves, cognate linkages, Robert's law of cognate linkages.

Complex number method for path generation problem 3 precision points.

Unit 5

Synthesis for infinitesimally separated position, concept of polode and centrod, Euler's savery equation, inflection circle, Bobbilier and Hartman's construction.

Unit 6

Optimal synthesis of planer mechanisms, powell's search method, least square method, penalty function. Introduction to spatial mechanisms, D-H notations, introduction to kinematic analysis of robot arm.

VII Semester ME2443– PE IV : Renewable Energy System

Objective	Course Outcome				
To realize the importance of various renewable	CO-I: Students will be able to analyse solar energy and				
energy sources in this era of energy crisis. To	equipment's related to solar energy				
study the theory of conversation of various	CO-II: Students will be able to realize the potential of Solar				
renewable energy such thermal, electrical, etc.	Energy, biomass, biogas, gasifiers.				
Apply thermodynamics cycles to above systems.	CO-III: Students will be able to analyse the potential of				
To study Magneto Hydrodynamic systems.	Wind, OTEC & Tidal energy development				
	CO-IV: Students will be able to know the awareness of				
	geothermal energy and MHD power generation				
Unit 1	[8 hrs]				
	ral distribution of solar radiation, beam & diffuse radiation,				
measurement of solar radiation and measuring instr					
Unit 2	[8 hrs]				
Solar Collectors : Types of solar collectors, Solar flat plate collector, analysis of solar flat plate collector					
Concentrating Collectors: Line focusing, point focusing and non-focusing type, central receiver concept of power generations compound parabolic collector, comparison of flat & concentrating collectors. [CO - I]					
Unit 3 [8 hrs]					
Solar energy storage, sensible, latent and thermo chemical storage, solar pond					
Applications of Solar Energy: Water Heater, air H					
Solar photo- voltaic cell,					
	Methods of Biogas generation, factors affecting the biogas				
• • • •	gasifiers & constructional details chemistry of gasification fuel				
properties, applications of gasifiers. [CO – II]					
Unit 4	[7 hrs]				
Wind energy: - Basic principle of wind energy conv	version, Classification of WEC systems, savonius and darrieus				
rotars applications of wind energy. Site selection	n, Merits & demerits of wind power generation, combined				
wind/Diesel power plants, combined Solar/Wind power plant.					
OTEC & Tidal energy: Introduction: - ocean therm	al electric conversion open and closed cycle of OTEC, hybrid				
cycle, energy from tides basic principles of tidal pov	ver & components of tidal power plants, single & double basin				
arrangement, estimation of tidal power and energy, Advantages & Limitation of Tidal Power, Energy from ocean					
arrangement, estimation of tidal power and energy,	Advantages & Limitation of Indal Fower, Energy norn ocean

MECHANICAL ENGINEERING

VII Semester ME2444– PE IV : Engineering of Plastics

Objective Course Outcome		
 To familiarize students with : 1. Various Plastic materials, Their properties and applications 2. Different plastic processing techniques.[c] 	 Students will be able to identify the plastic materials for some specified applications based on its property. Students will be able to investigate suitable plastic Processing technique. Students will be able to evaluate the suitable machining and joining of plastic materials. 	
	4. Students will be able to justify the suitable Solid State Fabrication Techniques	

Unit 1

[7 Hrs]

[7 Hrs]

[8 Hrs]

[8 Hrs]

Chemistry and Classification of Polymers - Properties of Thermo Plastics - Properties of Thermosetting Plastics -

Applications - Merits and Disadvantages.[c]

Unit 2 Extrusion - Blow Molding - Casting - Thermo Forming - Rotomolding Study of molds [c]

Unit 3

Compression and Transfer Molding - Injection Molding- study of compression and injection molding moulds [c]

Unit 4

General Machining properties of Plastics - Machining Parameters and Their effect - Joining of Plastics -Mechanical Fasteners - Thermal bonding - Press Fitting. Testing of plastic [c]

Unit 5

[8 Hrs]

Fibers - Glass, Boron, Carbon, Organic, Ceramic and Metallic Fibers - Matrix Materials - Polymers, Metals and Ceramics. Open Mould Processes, Bag Molding, Compression Molding with BMC and SMC - Filament winding -Pultrusion - Centrifugal Casting - Injection Molding - Application of PMC's. [c]

Unit 6

[7 Hrs]

Solid State Fabrication Techniques - Diffusion Bonding - Powder Metallurgy Techniques - Plasma Spray, Chemical and Physical Vapor Deposition of Matrix on Fibers - Liquid State Fabrication Methods - Infiltration -Squeeze Casting - Rheo Casting - Compocasting - Application of MMCS. [c]

MECHANICAL ENGINEERING

VII Semester ME2445– PE IV : Finance & Cost Management

Objective	Course Outcome
 To develop in the engineering students the ability to analyze any engineering problem in a simple and logical manner and to apply a few well understood basic principles of Management to find its solution. To be able to take a proper decision at proper time which will be beneficial in future. 	 (I) The student will have ability to evaluate the cost of the product (II) The student will have the ability to Analyze the financial requirement. (III) The student will have improved Decision making ability. (IV) The student will have ability to take a proper decision on waste or scrap material.

Unit 1

Business Finance:

Need for finance, sources of finance (fixed and working capital), equity and preference shares, deposits from public, debentures, bonds, term loans, financial institutions in India, Financial statements and their analysis.

Unit 2

Concept of Cost:

Concept of cost, classification of cost, direct and indirect, fixed and variable, semi variable, product and period, controllable and uncontrollable costs, opportunity costs, sunk cost, joint cost, prime cost, factory cost, cost of production, selling and distribution cost, administrative cost, cost of sales.

Unit 3

Cost ascertainment and cost reduction:

Concept of overhead, collection of overheads, allocation and appointment, absorption of overheads, absorption rates, under – over absorption, cost centers, cost units, cost statement sheet. Areas of cost reduction, techniques, productivity.

Unit 4

Costing System:

Job costing, contract costing, cost plus contracts, batch costing, process costing, simple process costing, normal abnormal losses and gains, waste, scrap & spoilage, joint & byproducts, operating costing.

Unit 5

Cost Planning and Control:

Concept of budgeting, advantages and limitations, budgetary control, key factors, fixed and flexible budget. Standard costing, selling of standards, variance analysis.

Unit 6

Decision Making:

MECHANICAL ENGINEERING

VII Semester ME2446– PE IV : Artificial Intelligence

Obje	ective	Cour	se Outcome
•	To learn about the automation of machines tools making the system intelligent.	(I)	The student will have ability to analyze the concept of NLP,Expert System and role of Knowledge base in Artificial Intelligence.
•	Understanding the different techniques used for implementation of artificial intelligence	(IV)	The student will have ability to understand the rule based System and rules for conflict resolution. The student will have ability to analyze the role of Knowledge Engineer and Domain Expert with the help of routine example The student will have ability to analyze the NN/ANN applications in Mechanical Engineering.

Unit 1

Human and machine intelligence, Artificial Intelligence (AI), Programming in AI environment,. Natural Language processing (NLP) Architecture of an Expert system, Knowledge base, inference engine forward and backward chaining, Selection of inference mechanism.

Unit 2

Introduction, to Rule Based System, Conflict Resolution, Advantages and Drawbacks of Rule Based Systems Clausal Form Logic; Rule Base Verification, Refinement and Validation

Unit 3

Creating Knowledge Base, Knowledge Engineer and Domain Expert, Phases of Knowledge Engineering, Tools for Knowledge Engineering

Unit 4

Neural network applications, artificial neural network models, NN applications in Cellular manufacturing and other areas of mechanical Engg.]

Unit 5

Fundamentals of OOP (Object oriented programming), creating structures and objects, object operations, invoking procedures, programming applications, Object oriented expert systems.

Unit 6

Semantic nets, ruled systems for semantic nets, certainty factors, automated learning;

MECHANICAL ENGINEERING

VII Semester ME2447– PE IV : Maintenance Management

Objec	tive	Course Outcome
To St	udy	The student will be able to,
 (1) (2) (3) (4) (5) (6) (7) 	Functions of maintenance dept. Types of maintenance policies Various failures modes and their diagnosis Various conditioned monitoring technique Various types of maintenance costs & their estimation Various techniques for measurement of maintenance work Plan for maintenance of machines	 (I) understand the maintenance function, its importance, types and organize the maintenance department. (II) analyze the failure of a machine and plan the condition monitoring program for a machine .] (III) Estimate repair and maintenance cost and evaluate maintenance performance.] (IV) Understand the maintenance needs of basic electrical and mechanical devices.

Unit I

Objectives, scope, structure of maintenance organization and operating policies to guide management, policies with respect to work allocation, work force, intra and inter plant relation, material, finance and control. Concept of life cycle maintenance, optimization of total maintenance, analysis of productivity ,Reliability ,Maintainability, and Availability,

Unit II

[7 Hrs]

Maintenance policies, Preventive maintenance program, corrective maintenance guidelines, replacement policiescyclic replacement, group replacement, standbys, economics of machine replacement, TPM, RCM and CMMS.

Unit III

Failure analysis:

General practice, failure classification, data collection, failure pattern recognition, determination of replacement period, time between preventive maintenance checks. Use of various modern techniques to monitor the condition of machine to facilitate maintenance

Unit IV

Work measurement for maintenance:

Need for Work measurement ,various techniques for work measurement of direct and indirect labour. Work force requirement, location and size.

Unit V

Control and estimation of maintenance cost:

Job classification, various estimating techniques and its use.

Maintenance manual, plant performance improvement, Maintenance training program, Maintenance control indices and factor affecting them .Lubrication system-need ,design and implementation.

Unit VI

Maintenance of various mechanical and electrical equipments.

VII Semester ME2448– PE IV : Total Quality Management

COURSE OBJECTIVES	COURSE OUTCOMES
 The course aims to build an overall capability to understand Quality and its relevance in today's 	 Develop an understanding on quality management philosophies and frameworks.
dynamic market.	 Develop in-depth knowledge on various tools and techniques of quality management.
 Various Quality Improvement tools and technique shall be introduced and practiced so as to develop skills and knowledge to function as a good quality professional in the Engineering Profession. 	 To Evaluate the applications of quality tools and techniques in both manufacturing and service industry
	 Ability to use quality management methods analyzing and solving problems of organization.

Unit 1

Principles of Quality Management, Pioneers of TQM, Quality costs, Quality system Customer Orientation, Benchmarking, Re-engineering

Unit 2

Leadership, Organizational Structure, Team Building, Information Systems and Documentation – Quality Auditing, ISO 9000 - QS 9000.QMS, Quality awards.

Unit3

Single Vendor Concept, J.I.T., Quality Function deployment, Quality Circles, KAIZEN, SGA POKA -YOKE, Taguchi Methods. SMED, Kanban system. Cost of quality. Robust design

Unit4

Unit5

Methods and Philosophy of Statistical Process Control, Control Charts for Variables and Attributes

[8 hrs]

[7 hrs]

[8 hrs]

[7 hrs]

[7 hrs]

[8 hrs]

Cumulative sum and exponentially weighted moving average control charts, Others SPC Techniques – Process Capability Analysis. Acceptance Sampling Problem, Single Sampling Plans for attributes, double, multiple and sequential sampling,]

Unit6

Six sigma manufacturing concepts. Six-sigma philosophy Quality strategy and policy. Motivation and leadership theories. Continuous vs. breakthrough improvements. Management of change, DMAIC Methodology. Lean manufacturing

VII Semester ME2449– PE IV : Project Evaluation & Management

Objective	Course Outcome
The course focuses on developing complete	The students will be able
understanding of formulating a problem/project and finding possible solutions against the given constraints. The overall learning shall resolve project identification evaluating its technical and economical feasibility and developing skills for its planning, and establishing controls. Relevant techniques, writing skills and monitoring methods shall be dealt with in details	 To apply the concepts of monitoring and evaluation, appraise To analyze the best monitoring methods, appreciate evaluation in the context of developmental project work To perform problem analysis, determine relevant indicators and data necessary for evaluation, Implement a monitoring and evaluation process, establish baselines and targets

Unit1

Project Identification considering objectives and SWOT analysis, Screening of Project Ideas, Technical, Market, Financial, Socioeconomic and Ecological Appraisal of a project demand forecasting, secondary data, accuracy, confidence level, uncertainty.

[7 hrs]

[7 hrs]

[9 hrs]

[7 hrs]

[7 hrs]

[g hre]

Unit2

Technical feasibility: Process selection, Level of automation, plant capacity, acquiring technology, Appropriate technology plant location, Equipment selection & procurement, Govt. policies. Value analysis and project evaluation.

Unit3

Economic feasibility: Cost of Project, working capital analysis, fixed cost, means of finance, estimation of sales & production price analysis, Break even point, Projected cash flow statements, projected balance sheet, projected profit & loss statement, projected cash flow, rate of return, Discounted payback period, cost benefit analysis, return after taxes.

Unit 4

Project Planning and Control: Work break down structure and network development. Basic Scheduling, Critical Path and four kinds of floats. Scheduling under probabilistic durations, Time Cost tradeoffs, CPM, PERT, Optimum project duration, resource allocation, updating.

Unit 5

Unit6

Project report: Preparation of project report, risk analysis, sensitivity analysis, methods of raising capital

onito		
Initial review, performance analysis	, ratio analysis, sickness, project revival,	Project Monitoring with PERT/Cost,

MECHANICAL ENGINEERING

VII Semester ME2461– PE V : Stress Analysis

analyze any engineering problem in a simple and logical manner and to apply to its solution a few, well understood basic principles of stress analysis.[c,e] 3. 4.	 dents will be able to: Analyze the stresses and strains in simple problems in Cartesian co-ordinate. Analyze the stresses and strains in simple problems in Polar co-ordinate. Analyze the stresses and strains using whole field method. Analyze the stresses and strains using strain gauges, carryout of analysis for fracture and fatigue; design a proper stress analysis system for as per system requirements.

Unit 1

Two Dimensional Problems in. Cartesian Coordinate system -Fundamentals of stress & strain, stress-strain relationship, Elastic constant, plane stress, plane strain., differential equation of equilibrium Boundary conditions, Saint Venant's principle, compatibility equation.

Unit 2

Airys stress function. Stress analysis of cantilever subjected to concentrated load at its end and simply supported beam subjected to uniformly distributed load.

Two dimensional problems in polar coordinate systems -General equations of equilibrium in polar coordinate compatibility equation.

Unit 3

Stress distribution about symmetric. axis, stress analysis of cylinder subjected to ~ internal & external pressure, Pure bending of curved beams, effect of hole on the stress distribution in plates, Stress analysis of rotating circular disk.

Unit 4

Introduction to various methods of stress analysis like grid techniques, brittle coating method, Moire fringe method etc.

Two Dimensional Photo elasticity - Introduction to basic optics related to photo elasticity, stress optic law, plane & circular polariscope arrangements, diffusion and lens type polariscope .Effect of stressed model in plane & circular polariscope, Isoclinic & Isochromatics, stress trajectories, calibration of photo elastic material (determination of fringe constant). Various photoelastic materials and their properties, Casting of photo elastic models, Tardy's and other compensation technique. Separation techniques like, shear difference, oblique incidence & electrical analogy.

MECHANICAL ENGINEERING

[8 hrs]

[7 hrs]

Unit 5

Strain gage technique for stress & strain analysis -Introduction to electrical resistance strain gages, gage . factor, bridge circuit, bridge balance, output voltage of Wheatstone bridge, balancing of bridge, temperature compensation, various bridge configurations, bonding of strain gages to the specimen, determination of principle strains & stresses using strain rosettes. Environmental effects on performance of strain gages, Strain gages response to dynamic strains, Effect of lead wires. Introduction to Strain measurement on rotating components, Static & Dynamic Strain Measurement introduction to semiconductor gages, high temperature strain gages & self-temperature compensated gages. Introduction to Commercial strain indicators.

Unit 6

Introduction to fatigue and fracture mechanics.

VII Semester ME2462– PE V : Product Design and Development

Objective	Course Outcome
To understand the Product Life Cycle. Study different	Students will be able to:
design techniques, product development phases,	(1) Evaluate the product life cycle
process selection, material selection and costs	(2) Analyze and select the materials and
associated with PDD	manufacturing processes for designed product.
	(3) Evaluate the product for different design criteria
	like Value engineering/ analysis, robust design,
	benchmarking, DFX,etc and estimate the product
	costing.
	(4) Explain the various prototyping methods and its
	economics.

	Introdu	ction				[7 hrs]		
	Importa	nce of product design, typ	es of design, produ	ct definition, produc	t specification,			
UNIT 1	Phases	of product development:	conceptual, embodir	ment and detailed d	esign, product			
	and tech	nnology development cycle	, concept generation	and evaluation met	hods.			
UNIT 2	Materia	I and Process selection				[7 hrs]		
		Material selection – Importance, classification, material performance characteristic, Selection criteria, Ashby Material selection chart.						
	Process selection – Importance types of manufacturing processes and their classification, sources of information, selection criteria, Material and Process selection Methods- Expert							
	-	s, Computer Database App			atrix, AHP and

VII Semester ME2463– PE V : Power Plant Engineering

Ob	jective	Course Outcome
1.	To study the basics of power generations systems.	(I) Student will be able to understand the various
•		systems of thermal power plant (Steam and Gas)
2.	To study conventional & non-conventional power plants.	(II) Student will be able to understand hydraulic power
2	To study the combined operations of different	plants.]
3.	To study the combined operations of different power plants.	(III) Student will be able to undertake power load
		analysis & Economic analysis of power generations
4.	To study Power load analysis & Economic analysis	systems.
	of power generations systems.	(IV) Student will be able to understand nuclear power
		plat and safety aspect.

Unit1

THERMAL POWER PLANT-I

Introduction to thermal power plants and power plant layouts.

Fuel characteristics, handling, storage, preparation & firing methods. Ash & dust collection and handling. Boiler: classification, general arrangement, details of different components and system like draught system, steam turbine systems, condenser, cooling towers, water treatment, Waste Disposal-Present practices, environmental hazards and other social aspects.

Unit2

THERMAL POWER PLANT- II

Gas Turbine Power Plant: -Introduction, power plant layouts, Open cycle, close cycle power plants. Various components and systems. Methods to improve efficiency. Reheat and Regeneration cycle and their combinations Diesel Electric Power Plant: - Introduction, Outline, type of engines, different components, performance, plant layout.

Comparison with other power plant. Introduction to captive power plant.(To study the practical aspect ot power plant, the visit to nearby power plant shall be arrange for the students).

Unit 3

HYDROELECTRIC POWER PLANT.

Hydrology: - Rainfall, Runoff, Hydro graph, flow duration curve, mass curve.

Hydroelectric power plant: - Site selection, classification of hydroelectric power plant, general arrangement, details of different components, turbine selection, models & model testing, governing.

Comparison with other power plant.

Unit 4

POWER PLANT ECONOMICS

Load Analysis - Fluctuating Load on power plants, Load curves, various terms & definition, peak load, effect of fluctuating load.

MECHANICAL ENGINEERING

Unit 5

Unit 6

NUCLEAR POWER PLANT

Introduction to Nuclear Engineering, Global scenario, prominent installations worldwide, present & proposed nuclear plant in India.

Nuclear Reactors: - Types of reactors, PWR, BWR, CANDU, Gas cooled, liquid metal cooled, Breeder reactor. Operational requirements and difficulties, site selection for location of a nuclear power station Nuclear Waste Disposal-Present practices, environmental hazards and other social aspects.

Comparison with other power plant.

[7 Hrs]

[8 Hrs]

COMBINED OPERATION OF DIFFERENT POWER PLANTS

Combined operation: - Need division, combination of different plant & their coordination, advantages. NON CONVENTIONAL POWER GENERATION SYSTEMS

Introduction to Non Conventional power Generation Systems

Geo-Thermal Power Plant, Tidal Power Plant, Wind Power Plant, Solar Power Plant Global scenario, prominent installations worldwide present & proposed plant locations.

VII Semester ME2464– PE V : Value Engineering

Objective To familiarize students with :		Course Outcome	
		Students will be able to:	
1.	Philosophy of Value Analysis / Value Engineering , its importance and application	1.	Explain the various typs of Values and functions.
		2.	Evaluate the product life cycle.
2.	The various steps involved in systematic implementation of Value Analysis / Value Engineering	3.	Analyze the project selection and estimate life cycle costs.
		4.	Evaluate and improve value of product/system by designing and critically analyzing the VE job plans and othe VE/VA techniques.

Unit 1 [7 hrs]			
Introduction to Value Engineering (V.E.) and Value Analysis, Quantitative definition of Value, Use Value and			
Prestige Value, Estimation of product quality/performance, Types of Functions.			
Unit 2 [7 hrs]			
Life Cycle of a Product, Product life cycle Management, Methodology of V.E.,			
Unit 3 [8 hrs]			
Relationship between Use Functions and Esteem Functions in product design, Functional Cost and Functional			
Worth, Effect of value improvement on profitability, Aims of VE systematic Approach			
Unit 4 [8 hrs]			
Introduction to V.E. Job plan / Functional Approach to Value Improvement, Various phases and techniques of the			
job plan			
Unit 5 [8 hrs]			
Factors governing project selection, Life Cycle Costing for managing the Total Value, Concepts in LCC, Present			
Value concept, Annuity concept, Net Present Value, Pay Back period, Internal rate of return on investment (IRR),			
Examples and illustrations			
Unit 6 [7 hrs]			
Creative thinking and creative judgment, False material, labor and overhead saving, System Reliability, Reliability elements in series and parallel, Decision matrix, Estimation of weights and efficiencies, Sensitivity analysis, Utility functions, Fast diagramming, Critical path of functions, DARSIRI method of value analysis, Purchase price

MECHANICAL ENGINEERING

VII Semester

ME2465– PE V : Design of Experiments and Taguchi Methods

Objective	Course Outcome
The course aims to develop the engineering - analysis	Students will be able to
capability for engg-problems using basic statistical	1) Calculate and represent Frequency
tools and techniques. Detailed treatment of various	Distribution, Histograms and Probability
data analysis and handling technique leading to	distribution
complete understanding and modeling the processes	2) Design the experiments
including its optimization is envisaged in this	3) Distinguish and analyze the different
course.	optimization techniques.
	4) Analyze the variance in observation data.

Unit 1

Frequency Distribution & Histograms, Probability & its Distribution, Measures of Central Tendency & Distribution, Presentation of Statistical Data. Importance and significance of statistics in an engineering industry.

[7 Hrs]

[8 Hrs]

[7 Hrs]

[7 Hrs]

[8 Hrs]

[8 Hrs]

Unit 2

Confidence intervals, Hypothesis Testing, Correlation, Liner & Multiple Repression Analysis, Signification Testing, Introduction to minitav

Unit 3

Full & fractional factorial experiments, analysis of variance, Latin squares, response surface methology,

Unit 4

Group Method of Data Handling, shainin variable search technique, Regression equation in matrix form.

Unit 5

Taguchi techniques, concept of six sigma, DoE and six sigma, Six sigma implementation.

Unit 6

Industrial application of Taguchi technique, orthogonal arrays, OA selection, DoE with Taguchi and comparison with conventional DoE

MECHANICAL ENGINEERING

VII Semester ME2466– PE V : Industrial Safety

Objective	Cou	rse Outcome
•To understand the need and importance of safety. Study	(I)	Student will be able to understand the risk
different types of accidents and its preventions. Also study		management
 the various safety equipments and their applications. Learn how to get higher operating plant and equipment 	(II)	Student will be able to handle the accidental
•Learn now to get higher operating plant and equipment reliability that lifts efficiency and output of operating assets, stops equipment failures and creates higher plant and equipment reliability, with this subject.		situation in plant
	(111)	Student will be able to understand the
		operations of different type of safety
		instruments.
	(IV)	Student will be able to arrange the training
		for employees on Safety.

Unit 1

Introduction

Introduction to occupational safety & health, need for occupational safety, Safety Organization, Safety Policy, Safety Committee, Safety Officer, Medical Officer, Labour welfare Officer, Safety manual, Disaster management plan, Government & other autonomous occupational safety & health organizations. Introduction to OHSAS 18000.

Unit 2

Occupational Accidents

Accident, causes of accident, cost of accident, unsafe conditions, unsafe actions, unsafe personal factors, Accident causations models, accident reporting, accident investigation & analysis, Application of remedial measures, result monitoring, Personal Protective Equipments(ppe), Types of ppe, legal provisions of accident reporting, safety performance measurement, Frequency Rate, Severity Rate, Incidence Rate, Introduction to IS:3786.

Unit 3

Risk Identification & Risk management

Plant safety inspection, Job safety analysis, Hazards identification & Risk analysis (HIRA), Fault tree analysis (FTA), Hazards & operability Study (HAZOP), Failure mode & Effect analysis(FMEA), Failure mode, criticality & effect analysis (FMCEA), Safety audits, Safety Integrity Level (SIL), Level of Protection Analysis (LOPA).

Unit 4

Safety & The Law

Introduction to various Laws & Rules pertaining to Safety, Health & Welfare of Indian work-force. Provisions of Factories Acts' 1948 pertaining to Safety only.

Unit 5

Safety with Machines

Safety in design, Plant layout & housekeeping, Machine maintenance, Machine guarding, types of machine guards, special tools for enhancing safety, safety in use of compressed gas cylinder, safety around grinding wheel, safety in drill machines, safety in use of hand tools, safety in press machines, handling and disposal of

MECHANICAL ENGINEERING

VII Semester ME2467– PE V : Control System Engineering

Objective	Course Outcome :- Students will be able to
 To develop an ability to define transfer function. To analyze the performance of control system in time domain and frequency domain 	 Describe the mathematical representation of various control system components and determine the transfer function of mechanical, electrical, thermal and fluid system. Analyse the construction and working of various control system components and electrical motors. Evaluate the performance of control system using time response analysis and stability analysis. Analyze the performance of control system on the basis of frequency response and design suitable compensation for the control system.

<u>Unit 1</u>

Introduction, System concept Open and Closed loop control systems. Transfer function, Mathematical Modeling of Physical System and system representation through Block Diagram. Transfer function through Block Diagram Simplification. Signal Flow Graph, Masons Gain Formula Block diagrams of various control systems.

Unit 2

Representation of Control components: Mechanical and Electrical components; Analogous systems; Thermal and Fluid systems.

<u>Unit3</u>

Electrical systems: - ac/dc servomotors; field controlled and armature controlled servomotors; positional servomechanisms; stepper motors.

Hydraulic systems: - Hydraulic pumps (gear; vane; and reciprocating piston) Cylinders, Direction control valves (2, 3, 4 way) Flow control valve; Relief valve Hydraulic servomotor.

Unit4

Transient and steady state response of first and second order systems Concept of stability; relative stability; Routh stability criteria.

Unit5

Frequency response and its characteristics; Bode plots; Nyquist plots. Gain margin and phase margin. Identification of system transfer function.

Unit6

Basic control actions; Proportional Integral and Derivative control actions and their effect on system performance. Root locus technique. Introduction to control system design log load compensation Feed Back Compensation and Pole -Zero placements.

MECHANICAL ENGINEERING

VII Semester ME2468– PE V : Tribology

Objective	Course Outcome
Tribology deals with design of fluid containment systems like seals and gasket, Lubrication of surfaces in relative motion to achieve reduced friction and wear. The structure of the bearing and the nature of fluid flow determine the loads that can be supported. Modeling systems as hydrostatic squeeze film and Elasto- hydrodynamic lubrication will be studied as infinite and later finite structures. Gas (air) lubricated and rolling contact type motions with deformation at contact will be studied as special systems.	

UNIT-1: Introduction

Introduction to tribology, History of tribology, Interdisciplinary Approach, Economic Benefits.

UNIT-2: Friction

Causes of Friction, Adhesion Theory, Abrasive Theory, Junction Growth Theory, Laws of Rolling Friction, Friction Instability.

UNIT-3: Wear

Wear Mechanisms, Adhesive Wear, Abrasive Wear, Corrosive Wear, Fretting Wear, Wear Analysis

UNIT-4: Lubrication and Lubricants

Importance of Lubrication, Boundary Lubrication, Mixed Lubrication, Full Fluid Film Lubrication; Hydrodynamic, Elastohydrodynamic lubrication, Types & Properties of Lubricants, Lubricants Additives.

UNIT-5: Fluid film lubrication

Fluid mechanics concepts, Equation of Continuity & Motion, Generalised Reynolds Equation with Compressible & Incompressible Lubricants

UNIT-6: Application Tribology

Introduction, Rolling Contact Bearings, Gears, Journal Bearings - Finite Bearings.

MECHANICAL ENGINEERING

VII Semester ME2469– PE V : Turbines

Objective	Course Outcome
Students should apply the fundamentals of fluid dynamics and thermodynamics to turbine. The student shall learn about equipment employed for converting water energy to electrical energy and different types of turbines and also understand steam turbine and gas turbine and its application.	 CO:1 The student will be able to describe and analyze the working of impulse water turbines.[a,e,k] CO:2 The student will be able to describe and analyze the working Centrifugal Pumps .[a,e,k] CO:3 The student will be able to define evaluate Steam nozzles and; describe and analyze the impulse steam turbines, reaction steam turbines.[a,e,k] CO:4 The student will be able to describe and analyze the working of Gas turbines.[a,e,k]

Unit No.	Contents	Max. Hrs.
Unit 1	Impulse Water Turbines: Momentum Principle and its Application, Classification of water turbines, Pelton wheel, its construction and working, velocity triangles, efficiency, power, work done, Pelton wheel design, Governing of Pelton wheel [CO:1]	[6 hrs]
Unit 2	Reaction Water Turbines Principle of operation, Construction and working of Francis and Kaplan Turbine, Effect of modification of velocity triangles on runner shape, Draft tube, Cavitations calculation of various efficiencies, Power, Discharge, Blade angles, Runner dimensions etc. governing of Francis and Kaplan turbine, Draft tube types and analysis [CO:2]	[7 hrs]
Unit 3	Steam nozzles: Compressible fluid flow, Static and Stagnation properties, Isentropic flow, Flow of fluid through nozzles, Continuity equation, Variation of velocity, area and specific volume, Mass of discharge, Maximum discharge, Critical pressure ratio, Choking, Effect of friction, Nozzles and Diffusers efficiency, Back pressure effect, Super saturated flow. [CO:3]	[7 hrs]
Unit 4	Impulse Steam turbines : Types of turbines, Compounding, Velocity diagrams, Performance analysis, Reheat factor, Stage efficiency, Governing, and Losses in turbines. [CO:3]	[6 hrs]
Unit 5	Reaction Steam turbines: Types of turbines, Compounding, Velocity diagrams, Performance analysis, Reheat factor, Stage efficiency, Governing, and Losses in turbines. [CO:3]	[6 hrs]
Unit 6	Gas turbines: Classification of gas turbines, Analysis, Regeneration, Inter-cooling, Reheating, Applications, Types of jet engines, Construction and working; propulsive efficiency [CO:4]	[7 hrs]

CIVIL ENGINEERING

VIII Semester ME2451 - Major Project

COURSE OBJECTIVES	COURSE OUTCOME
 To apply knowledge of mathematics, science and engineering in a global, economic, environmental and societal context and engage in life-long learning. To design a model, a system or components considering environmental, economic, social, political, ethical and sustainability and analyze and interpret the data. To work on multidisciplinary teams, tackle engineering problems, understand professional and ethical responsibility and communicate effectively. To apply knowledge of contemporary issues and use the techniques, skills, and modern engineering tools necessary for engineering practices. To analyze and design RCC & steel structures, draw and prepare cost estimates of civil engineering structures. 	 able to: 1. Demonstrate a sound technical knowledge of their selected project topic. 2. Undertake problem identification, formulation and solution. 3. Design engineering solutions to complex problems utilizing a systems approach including ability to work in a team. 4. Communicate effectively to discuss and solve engineering problems.
Mapped Program Outcomes : 1,2,3,4,5,6,7,8,9,10,11,1	2 PSO : i,ii,iii

The group of students will continue to work for the project allotted previously and will submit a project report based on their studies. Evaluation will be done continuously and viva voce conducted at the end of the semester.

CIVIL ENGINEERING

VIII Semester ME2452 - Extra-Curricular Activity Evaluation

COURSE OBJECTIVES	COURSE OUTCOME		
 To expose to culture and tradition. To provide opportunity for student to perform and present their hidden talent, still and art. To nurture hobbies. To organize co-curricular activities to make competitive spirit, cooperation, leadership, diligence, punctuality, team spirits. To develop creative talent, self-confidence, sense of achievement. To be able to design process on environmental, social, political, ethical, health and safety. To develop broad education to understand the impact of engineering solution in a global economic, environmental, society. 	 An ability to work initially as well as part of team to achieve set goals. An ability to work to serve society and for betterment of society. An ability to communicate with people at large. 		
Mapped Program Outcomes : 5,6,7,9,10,11			

Due credits will be given to the students based on their performance and involvement in different extra and co-curricular activities conducted within the college or by other organizations/ institutions. Due credit will also be given to the student if they are successful in different competitive examinations conducted by different organizations. The guidelines as given in academic regulations will be followed for evaluation.
