Chairperson	Dean (Acad. Matters)	Date of Release	Version	

**I SEMESTER**  
**25DS101: Probability and Statistics****Course Outcomes :****Upon successful completion of the course the students will be able to**

1. Reveal the hidden meaning in the data by applying some basic statistical formulae and probability distribution concepts using the tool 'R'
2. Employ the sampling techniques to find the estimates and test its validity using hypotheses testing
3. Analyze and compare sample data to make inference about the population data.
4. Design and implement the predictive model using simple and multiple regression technique

**Unit I:**

(7 Hrs.)

Introduction: Grouping and displaying data to convey meaning: Raw data, arranging data, frequency distribution, Measures of central tendency and dispersion in frequency distribution: arithmetic mean, weighted mean, geometric mean, Median, mode, dispersion, ranges, Exploratory data analysis(EDA). Introduction to R Statistics

**Unit II:**

(7 Hrs.)

Probability and Probability distribution: Basic terminology in probability, probability rules, Probabilities under conditions of statistical independence, probabilities under conditions of statistical dependence. Probability distribution: What is probability distribution, random variables, use of expected value in decision making, and various distributions

**Unit III:**

(6 Hrs.)

Sampling and Sampling Distribution and Estimation: Introduction to sampling, random sampling, Introduction to sampling distribution. Estimation: Introduction, Point estimates, Interval estimates and confidence interval, interval estimates using t distribution, determining the sample size in estimations

**Unit IV:**

(7 Hrs.)

Testing Hypothesis: One sample test, Two sample tests: Introduction, testing hypothesis, hypothesis testing of means when the population standard deviation is known, measuring power of hypothesis, hypothesis testing of proportions, HT when standard deviation is not known, hypothesis testing for means and proportions, test for difference between means for various sample sizes

**Unit V:**

(6 Hrs.)

Chi-square and analysis of Variance: Introduction, chi-square as a test of independence, chi-square as a test of goodness of fit: testing the appropriateness of a distribution, analysis of variance, inference about a population variance, Inference about two population variance

**Unit VI:**

(6 Hrs.)

Simple Regression and Correlation and Multiple Regression and Modeling: Estimation using regression line, correlation analysis, making inference about population parameters, multiple regression and correlation analysis, finding the multiple regression equation, making inference about population parameters, modeling techniques

**I Semester**  
**25DS102: Mathematics for Data Science****Course Outcomes :****Upon successful completion of the course the students will be able to**

1. Acquire knowledge on various mathematical concepts of Linear algebra to be used in Data Science.
2. Acquire the concepts of vector calculus.
3. Solve the various problems using optimization.
4. Solve data science problems through a guided approach.

**Unit I:**

(7 Hrs.)

Linear algebra: Systems of Linear equations, Solving Systems of Linear equations, Vector Spaces, Linear Independence, Basis and Rank linear mappings, Affine Spaces

**Unit II:**

(7Hrs.)

Analytic Geometry: Norms, Inner Products, Lengths, and Distances Angles and Orthogonality, Orthonormal Basis, Orthogonal Complement, Inner Product of Functions, Orthogonal Projections, Rotations

**Unit III:**

(6 Hrs.)

Matrix Decompositions: Determinant and Trace, Eigenvalues and Eigenvectors, Cholesky Decomposition, Eigendecomposition, and Diagonalization, Singular Value Decomposition, Matrix Approximation, and Matrix Phylogeny

**Unit IV:**

(7Hrs.)

Vector Calculus: Differentiation of Univariate Functions, Partial Differentiation, and Gradients, Gradients Vector-Valued Functions, Gradient of Matrices, Useful Identities for Computing Gradients, Backpropagation, and Automatic Differentiation, Higher-Order Derivatives, Linearization and Multivariate Taylor Series

**Unit V:**

(6 Hrs.)

Optimization in Data Science: Basics of optimization problem, Components of an Optimization Problem, Types of Optimization Problems, 1D optimization, Convex sets, Convex functions, and their properties unconstrained univariate optimization, nonlinear unconstrained multivariate optimization, Gradient (Steepest) Descent (OR) Learning Rule, Stochastic Gradient Descent, Method of the Conjugate Gradient

**Unit VI:**

(6Hrs.)

Multivariate Optimization with Equality Constraints, Multivariate Optimization with Inequality Constraints, Solving Data Analysis Problems – A Guided Thought Process

**Total Lecture 39 Hours**

**I SEMESTER****25DS103 : Data Mining and Warehousing****Course Outcomes :**

Upon successful completion of the course the students will be able to

- Understand basic concepts of data mining and get an overview of various mining functionalities
- Apply the techniques for supervised and unsupervised learning for knowledge extraction
- Apply the concepts of frequent pattern mining and predictive data mining for knowledge extraction
- Apply the concepts of data warehousing for designing multi dimensional data model and perform OLAP operations

<b>Unit I:</b>	(7 Hrs.)
Introduction to data mining: Process of data mining, Data Mining Functionalities, Classification of Data Mining systems, Data Mining Task primitives, Major issues in Data Mining, Applications of Data Mining	
<b>Unit II:</b>	(7 Hrs.)
Classification and Clustering: Classification: Introduction, decision tree, building a decision tree – the tree induction algorithm, split algorithm based on information theory, gini index, over fitting and pruning, decision tree rules, naïve Bayes method. Types of data in cluster analysis, categorization of major clustering methods: Partitioning methods, Hierarchical methods, Applications of clustering.	
<b>Unit III:</b>	(7 Hrs.)
Mining Frequent Patterns and Association Rules: Market Basket Analysis, Frequent Item sets and Association rules, A priori Algorithm, Improving the efficiency of A priori, FP-growth algorithm.	
<b>Unit IV:</b>	(6 Hrs.)
Data mining using Prediction methods: Linear and nonlinear regression, Multivariate regression, Logistic Regression	
<b>Unit V:</b>	(6 Hrs.)
<b>Introduction to data warehousing:</b> Data warehousing components, Building a data warehouse, Multi- Dimensional Data Model, OLAP Operations in the Multi-Dimensional Model	
<b>Unit VI:</b>	(6 Hrs.)
Three Tier Data Warehouse Architecture, Data Warehouse Models, Schemas for Multi-dimensional data Model, OnlineAnalytical Processing (OLAP) - OLAP Vs OLTP, Integrated OLAM and OLAP Architecture

**I SEMESTER****25DS104 : Research Methodology****Course Outcomes :****Upon successful completion of the course the students will be able to**

1. **Explain** the foundations of research, including objectives, approaches, ethics, formulation of research questions, and literature review process.
2. **Apply** suitable techniques to define research problems, develop hypotheses, and design appropriate qualitative and quantitative research frameworks.
3. **Analyze and interpret** methods of data collection, sampling, inferential statistics, and research data using appropriate software, while ensuring ethical considerations
4. **Develop** the ability to prepare and present well-structured, ethical research reports using effective writing techniques, formatting tools, reference management, and plagiarism detection methods.

**Unit I:****6 Hrs.**

**Research Foundations:** Introduction to research, objective and importance of research, types of research, research approaches, significance of research, research methods vs methodology, research process, criteria of good research, ethics in research. Research formulation and literature review. Characteristics of good research question, literature review process.

**Unit II:****6 Hrs.**

**Defining Research Problem:** Selecting the problem, necessity of defining the problem, technique involved in defining a problem, the planning process, selection of a problem for research, formulation of the selected problems, hypothesis formation, measurement.

**Unit III:****6 Hrs.**

**Research Design:** Meaning of research design, need for research design, features of a good design, important concepts relating to research design, different research designs, basic principles of experimental designs, qualitative and quantitative research.

**Unit IV:****6 Hrs.**

**Data Collection:** Classification of data, methods of data collection, sampling fundamentals, sampling techniques procedure and methods, observation, surveys, inferential statistics, and interpretation of results. Ethical considerations in research

**Unit V:****7 Hrs.**

**Data Analysis and interpretation:** Types of analysis, statistical techniques and choosing an appropriate statistical technique, hypothesis, hypotheses testing, data processing software, statistical inference, error analysis, interpretation of results and discussions.

**Unit VI:****8 Hrs.**

**Technical Writing and reporting of research:** Significance of report writing, different steps in writing report, layout of the research report, types of reports, mechanics of writing a research report, precautions for writing research reports.

**Use of tools / techniques for Research:** Methods to search required information effectively, reference management software like zotero/mendeley, software for paper formatting like latex/ms office, software for detection of plagiarism

### 25DS106 : Data Visualization and Analytics Lab

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Connect to and visualize data in Power BI
2. Build data model and get the insights from data.
3. Design compelling Power BI reports.

#### Lab Experiment List:

Expt. No	Name of Experiment
1	Introduction to Power BI and the different Power BI elements
2	Importing data into the Power BI from local data files and cloud servers
3	Clean, transform, and load data in Power BI
4	Create simple pre-defined models for visualization
5	Combine different visualization modes
6	Slice the dataset in Power BI
7	Matrices and tables in Power BI
8	Extract data relations and trends
9	Publish Power BI reports
10	Customizing the data analytics with Power BI and Power Automate

## I SEMESTER

### 25DS107 : Python for Data Science Lab

#### Course Outcomes

Upon successful completion of the course the students will be able to

- 1: To create various classes and objects
- 2: To select the required framework and appropriate libraries to write a program in python
- 3: To develop an application using functionalities provided under various packages.

SN	Experiments based on
1	Write a program using object-oriented concept (class and object).
2	Write a program using Numpy.
3	Write a program using Pandas data frames and implement data frames related operations.
4	Write program on data manipulation. Analyzing type of data through file handling.
5	Program using: Matplotlib.
6	Write a program using Scipy.
7	Write a program using Scikit-learn.
8	Write a program using Tensorflow
9	Mini Project: Develop an application using the concept of data science

**I Semester**  
**25DS111 – PE I: Image Computing****Course Outcomes :****Upon successful completion of the course the students will be able to**

- Understand the need for image transforms different types of image transforms and their properties
- Learn different techniques employed for the enhancement of images
- Understand the need for image compression and to learn the spatial and frequency domain techniques of image compression
- Learn different feature extraction techniques for image analysis and recognition

**Unit I:**

(7 Hrs.)

**Overview of Digital Image Processing and Image Enhancement:** A Simple Image Model, Sampling and Quantization, Basic Relationship Between Pixel, Basic gray level Transformation, Histogram Equalization, Histogram Processing, Local Enhancement, Image Subtraction, Image Averaging, Basics of Spatial Filtering, Smoothing Spatial Filtering, Sharpening Spatial Filters, Discrete Fourier Transformation, Fast Fourier Transformation, Fourier Properties, 2DFT, Inverse Fourier Transform, Filtering in Frequency Domain, Correspondence between Filtering in the Spatial and Frequency Domain, Smoothing Frequency Domain Filters, Sharpening Frequency Domain Filters, Homographic Filtering.**Unit II:**

(7 Hrs.)

**Image Segmentation:** Fundamentals, Point, line and edge detection, thresholding, Region Oriented Segmentation, Motion Based Segmentation.**Unit III:**

(7 Hrs.)

**Morphing, Representation and Description:** Introduction, Basic Morphological Algorithm, Chain Code, Polygonal Approximation, Signatures, Boundary Segments, Skeleton of a region, Boundary Descriptors, Shape Numbers, Fourier Descriptors, Regional Descriptors, Simple Descriptors, Topological Descriptors.**Unit IV:**

(6 Hrs.)

**Model of the Image Degradation/Restoration Process:** Noise Models, Restoration in the presence of Noise only-Spatial Filtering, Periodic Noise reduction by frequency domain filtering, Linear Position-Invariant Degradations, Estimation of Degradation Function, Inverse Filtering, Wiener Filtering, Constrained Least Square Filtering.**Unit V:**

(6 Hrs.)

**Wavelets:** Image Pyramids, Haar Transform, Multiresolution Expansions, Wavelet Transforms in 1D, Fast wavelet Transform, wavelet packets.

**I SEMESTER****25DS112 : PE I: Distributed Systems****Course Outcomes :****Upon successful completion of the course the students will be able to**

1. To develop and apply knowledge of distributed systems techniques and methodologies.
2. To gain experience in the design and development of distributed systems and distributed systems applications.
3. To gain experience in the application of fundamental Computer Science methods and algorithms in the development of distributed systems and distributed systems applications.
4. To gain experience in the design and testing of a large software system, and to be able to communicate that design to others.

<b>Unit I:</b>	(7 Hrs.)
<b>Characterization of Distributed Systems:</b> Introduction, Examples of Distributed Systems, Resource Sharing and The Web, Challenges, System Models: Introduction, Architectural Models- Software Layers, System Architecture, Variations, Interface and Objects, Design Requirements for Distributed Architectures, Fundamental Models- Interaction Model, Failure Model, Security Model.	
<b>Unit II:</b>	(7 Hrs.)
<b>Interprocess Communication:</b> Introduction, The API for the Internet Protocols- The Characteristics of Interprocess communication, Sockets, UDP Datagram Communication, TCP Stream Communication; External Data Representation and Marshalling; Client Server Communication; Group Communication- IP Multicast- an implementation of group communication, Reliability and Ordering of Multicast.	
<b>Unit III:</b>	(7 Hrs.)
<b>Distributed Objects and Remote Invocation:</b> Introduction, Communication between Distributed Objects- Object Model, Distributed Object Model, Design Issues for RMI, Implementation of RMI, Distributed Garbage Collection; RPC, Events and Notifications, Case Study: JAVA RMI	
<b>Unit IV:</b>	(6 Hrs.)
<b>Operating System Support:</b> Introduction, The Operating System Layer, Protection, Processes and Threads – Address Space, Creation of a New Process, Threads.	
<b>Unit V:</b>	(6 Hrs.)
<b>Distributed File Systems:</b> Introduction, File Service Architecture; Peer-toPeer Systems: Introduction, Napster and its Legacy, Peer-to-Peer Middleware, Routing Overlays.	
<b>Unit VI:</b>	(6 Hrs.)
<b>Coordination and Agreement:</b> Introduction, Distributed Mutual Exclusion, Elections, Multicast Communication. Transactions& Replications: Introduction, System Model and Group Communication, Concurrency Control in Distributed Transactions, Distributed Dead Locks, Transaction Recovery; Replication- Introduction, Passive (Primary) Replication, Active Replication.	
	<b>Total Lecture</b> <b>39 Hours</b>

**I Semester**  
**25DS113 : PE I: Time Series Data Analysis****Course Outcomes :****Upon successful completion of the course the students will be able to**

- Demonstrate an understanding of the concepts of time series analysis and models
- Demonstrate an understanding of stationary process and ARMA models used for modeling and forecasting
- Demonstrate an understanding of nonstationary and seasonal time series models
- Demonstrate an understanding of multivariate time series
- Demonstrate an understanding of State-space representations and estimation of time series models

<b>Unit I:</b>	(7 Hrs.)
Introduction: Examples of time series, Objectives of Time Series Analysis, Simple Time Series Models, Stationary models and autocorrelation functions Estimation and elimination of trend and seasonal components	
<b>Unit II:</b>	(7 Hrs.)
Stationary Process and ARMA Models: Basic properties and linear Processes Introduction to ARMA models, properties of sample mean and autocorrelation function, Forecasting stationary time series, ARMA (p, q) processes, ACF and PACF, and forecasting of ARMA processes, Spectral Analysis	
<b>Unit III:</b>	(7 Hrs.)
Modeling and Forecasting with ARMA Processes: Preliminary estimation , Maximum likelihood estimation, Diagnostics, Forecasting, and order selection	
<b>Unit IV:</b>	(6 Hrs.)
Nonstationary and Seasonal Time Series Models: ARIMA model, Identification techniques, Unit roots in time series, Forecasting ARIMA models, Seasonal ARIMA models, Regression with ARMA errors	
<b>Unit V:</b>	(6 Hrs.)
Multivariate Time Series: Second-order properties of multivariate time series, Estimation of the mean and covariance, Multivariate ARMA processes, Best linear predictors of second-order random vectors, Modeling and forecasting	
<b>Unit VI:</b>	(6 Hrs.)
State-Space Models: State-space representations, The basic structure model, State-space representations of ARIMA models, The Kalman Recursions, Estimation for state-space models, and estimation of time series models	
<b>Total Lecture 39 Hours</b>

**I SEMESTER**  
**25DS121: PE II: Natural Language Processing****Course Outcomes :****Upon successful completion of the course the students will be able to**

1. Model linguistic phenomena with formal grammars.
2. Design, implement and test algorithms for NLP problems
3. Apply NLP techniques to design real world NLP applications

<b>Unit I:</b>	(7 Hrs.)
Introduction to NLP: Computational Models of Language, Organization of NLP Systems, Natural Language Generation.	
<b>Unit II:</b>	(7 Hrs.)
Syntax: Linguistic Background, Elements of Simple Sentences, Parsing Techniques, Features and Augmented Grammars, Deterministic Parsing	
<b>Unit III:</b>	(7 Hrs.)
Semantic: Logical Form, Case Relations, Semantic Networks.	
<b>Unit IV:</b>	(6 Hrs.)
Context & World Knowledge: Knowledge Representation, Question, Answering Systems: Natural Language Generation, Typical NLP Systems and their Architectures, Cognitive Aspects of Natural Languages	
<b>Unit V:</b>	(6 Hrs.)
Indian Language Processing: Techniques of Machine Translation, Approaches to Machine Translation, Typical Case Studies in Indian Language Context	
<b>Unit VI:</b>	(6 Hrs.)
Introduction to Speech Processing: Word level Morphology and Computational Phonology; Basic Text to Speech; Introduction to HMMs and Speech Recognition, Part of Speech Tagging; Parsing with CFGs; Probabilistic Parsing. Representation of Meaning; Semantic Analysis; Lexical Semantics; Word Sense; Disambiguation; Discourse understanding; Indian language case studies	
<b>Total Lecture</b> <b>39 Hours</b>	

**Textbooks:**

**II SEMESTER****25DS201: Fundamentals of Machine Learning and Deep Learning****Course Outcomes :**

Upon successful completion of the course the students will be able to

- Interpret machine learning techniques suitable for a given problem
- Apply machine learning techniques to solve the problems
- Compare machine learning techniques
- Evaluate different machine learning techniques

**Unit I:**

(7 Hrs.)

Machine Learning: Introduction, Supervised algorithms, Unsupervised algorithms, Reinforcement, Bias variance trade-off, loss functions, experimentation and evaluation metrics.

**Unit II:**

(7 Hrs.)

Supervised Machine Learning: Bayes learning, K- nearest neighbor learning, Linear regression, logistic regression, introduction to support vector machines, kernel functions

**Unit III:**

(6Hrs.)

Unsupervised Machine Learning: Density estimation, Clustering, Dimensinality reduction, PCA

**Unit IV:**

(7 Hrs.)

Artificial Neural Networks: Biological neural network, Artificial neural network, Hopfield network, Perceptron, Multilayer networks and Backpropagation algorithm

**Unit V:**

(6 Hrs.)

Deep Learning: History of deep learning, perceptron learning algorithm, Multi-Layer Network and Optimization Technique, Dimension Reduction and Regularization, Convolutional Neural Networks: lenet, alexnet, zf-net, vggnet, googlenet, resnet, applications of convolutional neural networks

**Unit VI:**

(6 Hrs.)

Recurrent Neural Networks: back propagation through time (bptt), vanishing and exploding gradients, LSTM encoder decoder models, attention mechanism, Applications of RNN

**Total Lecture** 39 Hours**Textbooks:**

1.	"Introduction to Machine Learning"Third Ethem Alpaydin The MIT Press
2.	"Machine Learning"Second Tom M. Mitchell McGraw-Hill Education India Private Limited

**II Semester  
25DS203 : Big Data Analytics****Course Outcomes :****Upon successful completion of the course the students will be able to**

1. Understand the characteristics of big data and concepts of Hadoop ecosystem
2. Understand the concepts of Scala programming
3. Apply Mapreduce programming model to process big data
4. Analyze Spark and its uses for big data processing
5. Design programs for big data applications using Hadoop components

<b>Unit I:</b>	<b>7 Hrs.)</b>
Introduction to Big data: Introduction – Big Data- Characteristics of Big Data – Big data management architecture- Examining Big Data Types – Big Data Technology Components — Big data analytics –Big data analytics examples - Web Data Overview – Web Data in Action.	
<b>Unit II:</b>	<b>(7Hrs.)</b>
Hadoop : Introduction – History of Hadoop - Hadoop Ecosystem- Analyzing data with Hadoop - Hadoop Distributed File System- Design - HDFS concepts - Hadoop filesystem –Data flow – Hadoop I/ O - Data integrity – Serialization - Setting up a Hadoop cluster - Cluster specification - cluster setup and installation	
<b>Unit III:</b>	<b>(7 Hrs.)</b>
MapReduce: Introduction – Understanding Map, Reduce functions - Scaling out - Anatomy of a MapReduce Job Run - Failures – Shuffle and sort - Mapreduce types and formats - features – counters - sorting - Mapreduce Applications – Configuring and setting the environment - Unit test with MR unitlocal test	
<b>Unit IV:</b>	<b>(6Hrs.)</b>
Spark: – Installing spark – Spark applications, Jobs, Stages and Tasks –Resilient Distributed databasesAnatomy of a Spark Job Run – Spark on YARN- SCALA: Introduction- Classes and objects- Basic types and operators- built-in control structures- functions and closures- inheritance	
<b>Unit V:</b>	<b>(6 Hrs.)</b>
NoSQL Databases: Introduction to NoSQL- MongoDB: Introduction – Data types – Creating, Updating and deleing documents -Querying – Introduction to indexing – Capped collections. Hbase: Concepts - Hbase Vs RDBMS - Creating records- Accessing data – Updating and deleting data – Modifying dataexporting and importing data	
<b>Unit VI:</b>	<b>(6Hrs.)</b>
USE CASES: Call detail log analysis, Credit fraud alert, Weather forecast	
	<b>Total Lecture 39 Hours</b>

## II Semester 25DS204 : Big Data Analytics Lab

**Course Outcome:** After completion of the laboratory work, student will demonstrate the ability to

### Course Outcomes :

**Upon successful completion of the course the students will be able to**

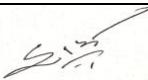

1. Understand hadoop and its ecosystems.
2. Implementation of HDFS
3. Apply MapReduce on various sets of data.
4. Understand basics of NoSQL Databases.
5. Apply database functionalities on datasets.

### Lab Experiment List:

Expt. No	Name of Experiment
1	Downloading and installing Hadoop; Understanding different Hadoop modes. Startup scripts, Configuration files.
2	Hadoop Implementation of file management tasks, such as Adding files and directories, Retrieving files and Deleting files
3	Implementation of Matrix Multiplication with Hadoop Map Reduce
4	Run a basic Word Count Map Reduce program to understand Map Reduce Paradigm
5	Implementation of K-means clustering using Map Reduce
6	Installation of Hive along with practice examples
7	Installation of HBase, Installing thrift along with Practice examples
8	Practice importing and exporting data from various data bases .
9	Installation of MongoDB database.
10	Creation of database in MongoDB platform and apply various operations on it.

**II Semester  
25DS205 : Data Modeling****Course Outcomes :****Upon successful completion of the course the students will be able to**

1. Understand the concepts of relational database modelling, multidimensional data modelling, unstructured data modelling
2. Apply the knowledge of database modelling concepts for structured data to create the database model
3. Apply the knowledge of database modelling concepts for un-structured data to create the database model
4. Analyze the data to find the suitable data modelling approach.

**Unit I:****(6 Hrs.)**

Introduction: Concepts of Data Modelling, Data Modelling Types, Data Model Standards, Business Requirements. Relational data base modeling concepts. Creation logical data model, creation physical data model, implementation of data models into databases. ER approach (subtypes and supertypes, Extensions and Alternatives), advanced Normalization concepts

**Unit II:****(7 Hrs.)****Multidimensional Data Model:**

OLAP and OLTP Concepts, Multidimensional Data Modelling, Concepts of facts, dimension, Types of facts and dimensions, types of schemas. Time dependant data, Data Cube Technology, Modelling for Data Warehouses and Data Marts

**Unit III:****(7 Hrs.)**

Enterprise Data Models and Data Management, aggregate data models, More details on data models, Relationships, Graphs databases, schemaless databases, Materialized views, modelling for data access. Data Models for GIS (Geographical Information System)

**Unit IV:****(7 Hrs.)****Modelling Unstructured data:**

Introduction to NoSQL databases, Basic Map Reduce, Partitioning and Combining, Composing Map Reduce Calculations, Key – Value databases. What is Key – Value Store?, Key – Value store features, transactions, structure of data, case studies based on actual data bases

**Unit V:****(6 Hrs.)**

Document Databases: Introduction, Features, Consistency, Transactions, availability, Query Features, scaling, suitable use cases

**Unit VI:****(6 Hrs.)****Graph Databases:**

Introduction of the graph databases, features, consistency, Transactions, Availability, Query Features, suitable use cases

**Total Lecture 39 Hours**

**II Semester  
25DS211 : PE III: Computer Vision****Course Outcomes :****Upon successful completion of the course the students will be able to**

- Identify basic concepts, terminology, theories, models and methods in the field of computer vision,
- Describe basic methods of computer vision related to multi-scale representation, edge detection and detection of other primitives, stereo, motion and object recognition,
- Suggest a design of a computer vision system for a specific problem

<b>Unit I:</b>	(7 Hrs.)
Introduction: Introduction to Human and Computer Vision, Image Registration algorithm	
<b>Unit II:</b>	(6 Hrs.)
Pattern Recognition Techniques: Statistical, Structural, Neural and Hybrid Techniques, Feature Extraction Techniques, Training and Classification	
<b>Unit III:</b>	(7 Hrs.)
Stereo Vision: Sensing 3D Shapes, How the 3rd dimension changes the problem, Stereo 3D description, 3D Model, Matching	
<b>Unit IV:</b>	(7 Hrs.)
CBIR: Introduction, Content based image retrieval	
<b>Unit V:</b>	(6 Hrs.)
Virtual Reality: Introduction, basics of Virtual reality	
<b>Unit VI:</b>	(6 Hrs.)
Emerging CV applications: Recognition of characters, Fingerprint, Iris and Face	
<b>Total Lecture</b> <b>39 Hours</b>

- Characterize the distinctions between Infrastructure, Platform and Software as a Service (IaaS, PaaS, SaaS) abstractions;
- Analyze the advantages and disadvantages of Public and Private Clouds.
- Develop and deploy cloud application using popular cloud platforms.
- Design Cloud security solutions

<b>Unit I:</b>	(7 Hrs.)
Introduction to Cloud Computing: Origins and Influences; Basic Concepts and Terminology; Goals and Benefits; Risks and Challenges. Fundamental Concepts and Models: Roles and Boundaries; Cloud Characteristics; Cloud Delivery Models; Cloud Deployment Models	
<b>Unit II:</b>	(6 Hrs.)
<b>Cloud Computing Technologies:</b> Broadband Networks and Internet Architecture; Data Center Technology; Virtualization Technology; Web Technology; Multitenant Technology; Service Technology; Case study.	
<b>Unit III:</b>	(7 Hrs.)
<b>Cloud Infrastructure Mechanisms:</b> Logical Network Perimeter; Virtual Server; Cloud Storage Device; Cloud Usage Monitor; Resource Replication; Ready-made environment.	
<b>Specialized Cloud Mechanisms:</b> Automated Scaling Listener; Load Balancer; SLA Monitor; Pay-per-use Monitor; Audit Monitor	
<b>Unit IV:</b>	(7 Hrs.)
<b>Cloud Management Mechanisms:</b> Remote Administration System; Resource Management System; SLA Management System; Billing Management System.	
<b>Cloud Security:</b> Basic Terms and Concepts; Threat Agents; Cloud Security Threats; Additional considerations.	
<b>Unit V:</b>	(6 Hrs.)
<b>Audit and compliance:</b> Internal policy compliance, Governance, Risk and Compliance (GRC), Regularity/External Compliance, Cloud Security Alliance, Auditing the cloud for Compliance, Security-as-a-Cloud.

## II Semester

### 25DS213 : PE III: Social Network Analysis

#### Course Outcomes :

Upon successful completion of the course the students will be able to

- Develop semantic web related applications.
- Represent knowledge using ontology.
- Predict human behaviour in social web and related communities.
- Visualize social networks.

<b>Unit I:</b>	(6 Hrs.)
INTRODUCTION:Introduction to Semantic Web: Limitations of current Web - Development of Semantic Web - Emergence of the Social Web - Social Network analysis: Development of Social Network Analysis - Key concepts and measures in network analysis - Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities - Web-based networks - Applications of Social Network Analysis	
<b>Unit II:</b>	(7 Hrs.)
MODELLING, AGGREGATING: Ontology and their role in the Semantic Web: Ontology-based knowledge Representation - Ontology languages for the Semantic Web: Resource Description Framework - Web Ontology Language - Modelling and aggregating social network data	
<b>Unit III:</b>	(7 Hrs.)
KNOWLEDGE REPRESENTATION:State-of-the-art in network data representation - Ontological representation of social individuals - Ontological representation of social relationships - Aggregating and reasoning with social network data - Advanced representations	
<b>Unit IV:</b>	(7 Hrs.)
EXTRACTION AND MINING COMMUNITIES IN WEB SOCIAL NETWORKS: Extracting evolution of Web Community from a Series of Web Archive - Detecting communities in social networks - Definition of community - Evaluating communities - Methods for community detection and mining - Applications of community mining algorithms - Tools for detecting communities social network infrastructures and communities - Decentralized online social networks - Multi-Relational characterization of dynamic social network communities.	
<b>Unit V:</b>	(6 Hrs.)
PREDICTING HUMAN BEHAVIOUR AND PRIVACY ISSUES: Understanding and predicting human behaviour for social communities - User data management - Inference and Distribution - Enabling new human experiences - Reality mining - Context - Awareness - Privacy in online social networks - Trust in online environment - Trust models based on subjective logic - Trust network analysis - Trust transitivity analysis -	
<b>Unit VI:</b>	(7 Hrs.)
VISUALIZATION AND APPLICATIONS OF SOCIAL NETWORKS: Graph theory - Centrality - Clustering - Node-Edge Diagrams - Matrix representation - Visualizing online social networks, Visualizing social networks with matrix-based representations - Matrix and Node-Link Diagrams - Hybrid representations - Applications - Cover networks - Community welfare - Collaboration networks - Co-Citation networks.	
Total Lecture	39 Hours

		July 2025	1.00	Applicable for AY 2025-26 Onwards

**II Semester**  
**25DS221: PE IV: Text Analytics****Course Outcomes :****Upon successful completion of the course the students will be able to**

- Familiarize the learners with the concept of social media analytics and understand its significance.
- Familiarize the learners with the tools of social media analytics.
- Enable the learners to develop skills required for analyzing the effectiveness of social media for business purposes

**Unit I:** (6 Hrs.)**Introduction to Social Media Analytics (SMA):**

Social media landscape, Need for SMA; SMA in Small organizations; SMA in large organizations; Application of SMA in different areas.

**Unit II:** (6 Hrs.)**Network fundamentals and models:**

The social networks perspective - nodes, ties and influencers, Social network and web data and methods. Graphs and Matrices- Basic measures for individuals and networks. Information visualization

**Unit III:** (6 Hrs.)**Making connections:**

Link analysis. Random graphs and network evolution. Socialcontexts: Affiliation and identity.

**Unit IV:** 7 Hrs.)**Web analytics tools:**

Clickstream analysis, A/B testing, online surveys, Web crawling and Indexing. Natural Language Processing Techniques for Micro-text Analysis

**Unit V:** 7 Hrs.)**Facebook Analytics:**

Introduction, parameters, demographics. Analyzing page audience. Reach and Engagement analysis. Post-performance on FB. Social campaigns. Measuring and Analyzing social campaigns, defining goals and evaluating outcomes, Network Analysis. (LinkedIn,Instagram, YouTube Twitter etc. Google analytics. Introduction. (Websites)

**Unit VI:** (7 Hrs.)

Processing and Visualizing Data, Influence Maximization, Link Prediction, Collective Classification, Applications in Advertising and Game Analytics Introduction to Python Programming, Collecting and analyzing social media data; visualization and exploration

**Total Lecture 39 Hours**

**II Semester****25DS222 : PE-IV : Information Retrieval and Recommendation****Course Outcomes :****Upon successful completion of the course the students will be able to**

1. Understand the working, significance, applications of Information retrieval systems.
2. Compare different IR models.
3. Design text and multimedia indexing structures for searching of web documents.
4. Justify the evaluation techniques to measure the performance of Information Retrieval System.
5. Apply machine learning algorithms for information retrieval.
6. Design image retrieval algorithms.

Unit I:	(7 Hrs.)
Introduction: Information Retrieval systems, Working with electronic text, Test Collections, Open source IR systems, Information versus Data Retrieval, Basic Concepts: The Retrieval Process, Logical View of Documents. Modelling: A Taxonomy of IR Models, Reference Collections. Significance of Information Retrieval, Impact of the web on Data Retrieval, Applications of Data Retrieval, Basic Data Retrieval System Architecture, Relationships between Digital library and IRS, Open Source IR Systems : Lucene , Wumpus	
Unit II:	(7 Hrs.)
Basic Searching and Indexing: Preprocessing: Simple Tokenizing, Stop-word Removal, Stemming and Lemmatization, Boolean and vector-space retrieval models, Sparse Vectors, Positional Postings, Inverted (static and dynamic) indices, Index Construction, Index Compression, Term weighting, TF-IDF weighting, cosine similarity, Relevance feedback and query expansion. Language Model based IR, Probabilistic Model, Binary Independence Model, Latent Semantic Indexing Mode	
Unit III:	(7 Hrs.)
Evaluation: Data Retrieval System Evaluation, Standard test Collections, Evaluation of Unranked Retrieval Sets, Evaluation of Ranked Retrieval Results, Assessing Relevance, Evaluations on Benchmark Text Collections. The Text Retrieval Conference (TREC), Using Statistics in Evaluation, Minimizing Adjudication Effort, Non-traditional Effectiveness Measures, Measuring Efficiency: Efficiency Criteria, Queueing Theory, Query Scheduling, Caching	
Unit IV:	(6 Hrs.)
Web Search: Web Search Basics, Web Crawling and Indexing, XML retrieval, Link Analysis, Page Rank and HITS algorithms, Searching and Ranking, Relevance Scoring and ranking for Web, Hubs and Authorities. Multimedia IR: Spatial Access Methods, Distance Function, Generic Multimedia Indexing Approach	
Unit V:	(6 Hrs.)
Parallel and distributed IR: Hadoop and Map Reduce, Personalized search, Collaborative filtering and content-based recommendation of documents and products, handling "invisible" Web, Snippet generation, Summarization, Question Answering, Cross-Lingual Retrieval. Vector space classification, Support vector machines and machine learning on documents, Flat clustering, Hierarchical clustering, Matrix decomposition. Naive Bayes, Decision Trees, and Nearest Neighbor, expectation maximization (EM).	
Unit VI:	(6 Hrs.)
Image Retrieval: Content-based Image Retrieval, Image Feature Description, Order system, Texture, Shape, Characteristics of Image Queries, Image Retrieval systems.
