

Nagar Yuwak Shikshan Sanstha's

# Yeshwantrao Chavan College of Engineering

(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)

(Accredited 'A++' Grade by NAAC with a score of 3.6)

Hingna Road, Wanadongri, Nagpur - 441 110

## Bachelor of Technology

### SoE & Syllabus 2023

#### 1<sup>st</sup> to 8<sup>th</sup> Semester

(Department of Mechanical Engineering)

### B. Tech in Mechanical Engineering

Nagar Yuwak Shikshan Sanstha's

MSEs\* = Two MSEs of 15 Marks each will be conducted and marks of these 2 MSEs will be considered for Continuous Assessment

TA\*\* = for Theory : TA1-5 marks on Proctored Online Exam, TA2-12 marks on activities decided by course teacher, TA3 - 3 marks on class attendance

TA\*\* = for Practical : MSPA will be 15 marks each

### I SEMESTER

## 23GE1102 : Differential Equations, Matrices and Statistics

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Course Outcomes</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                 |
| <b>The students will be able to</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                 |
| <ol style="list-style-type: none"> <li>1. Use appropriate Methods to solve first order and higher order differential equations and apply it to find solution of engineering problems.</li> <li>2. Use Matrix method to solve linear system of equations, evaluate eigen values - eigen vectors and its applications.</li> <li>3. Make use of probability distributions to solve real life problems.</li> <li>4. Inspect scientific data, use proper curve fitting and find correlation, regression of variables.</li> </ol> |                 |
| <b>Unit I: Differential Equations I</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>(7 Hrs.)</b> |
| Linear differential equations of first order and first degree, Differential equation reducible to linear form, Exact differential equations (excluding the case of integrating factor) and their applications to various fields. <b>(Contemporary Issues related to Topic)</b>                                                                                                                                                                                                                                              |                 |
| <b>Unit II: Differential Equations II</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>(7 Hrs.)</b> |
| Higher order linear differential equations with constant coefficients, Complementary functions and Particular Integral for different cases, Method of variation of parameters, Examples on application to various fields. <b>(Contemporary Issues related to Topic)</b>                                                                                                                                                                                                                                                     |                 |
| <b>Unit III: Differential Equations III</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>(6 Hrs.)</b> |
| Cauchy's homogeneous linear differential equations, Legendre's linear differential equation, Applications of differential equations to various fields (only up to second order). <b>(Contemporary Issues related to Topic)</b>                                                                                                                                                                                                                                                                                              |                 |
| <b>Unit IV: Partial Differential Equations</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>(6 Hrs.)</b> |
| Partial Differential Equations of first order, first degree i.e. Lagrange's form, linear homogeneous equations of higher order with constant coefficient. Application of variable separable method to solve first and second order partial differential equations. <b>(Contemporary Issues related to Topic)</b>                                                                                                                                                                                                            |                 |
| <b>Unit IV: Matrices</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>(7 Hrs.)</b> |
| Rank of a matrix, Consistency of system of equations using rank, Characteristics equations, Eigen values and Eigen vectors, Cayley Hamilton Theorem (without proof) statement and verification, Sylvester's theorem-statement and its application. <b>(Contemporary Issues related to Topic)</b>                                                                                                                                                                                                                            |                 |
| <b>Unit VI: Statistics</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>(6 Hrs.)</b> |
| Fitting of straight line, $y = a + bx$ , a parabola $y = a + bx + cx^2$ , exponential curves and power curves by method of least squares; Lines of regression and correlation; Rank correlation. <b>(Contemporary Issues related to Topic)</b>                                                                                                                                                                                                                                                                              |                 |
| <b>Total Lecture</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>39 Hours</b> |

## I SEMESTER

### 23GE1108 : Engineering Physics

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Correlate fundamentals of quantum mechanics to solve problems dealing with quantum particles.
2. Assess the characteristics of semiconductor materials in terms of crystal structures, charge carriers and Energy bands.
3. Examine the intensity variation of light due to interference, diffraction, laser and its applications.
4. Analyze the motion of charged particles in electric and magnetic field and its applications to electron optic devices.
5. Illustrate the nature and characterization of magnetic materials and superconductors for engineering applications.

#### Unit I: Quantum Physics

(7 Hrs.)

Wave-particle duality, de-Broglie's hypothesis, Wave packet, Heisenberg's uncertainty principle: significance and applications, Wave function and its probability interpretation, Schrodinger Equation, Particle in infinite potential well. **(Contemporary Issues related to Topic)**

#### Unit II: Semiconductor Physics

(7 Hrs.)

Formation of energy bands in solids; Classification of solids, Energy band diagram of Si and Ge, Intrinsic and extrinsic semiconductors, Conductivity, Law of mass action, Fermi function, Fermi level in intrinsic and extrinsic semiconductors, Dependence of Fermi level on impurity concentration and temperature, Hall effect. **(Contemporary Issues related to Topic)**

#### Unit III: Geometrical Optics

(7 Hrs.)

Interference: Interference in thin films, Wedge shaped film, Newton's rings, Applications of interference  
Diffraction: Fraunhofer diffraction from a single slit. **(Contemporary Issues related to Topic)**

#### Unit IV: Laser

(6 Hrs.)

Coherence and its types, Interaction of radiation with matter, Population Inversion, Pumping: methods and schemes, Optical resonant cavity, Ruby laser, Semiconductor diode laser, Properties and engineering applications of laser. **(Contemporary Issues related to Topic)**

#### Unit V: Electron Ballistics

(7 Hrs.)

Motion of a charged particle in uniform electric and magnetic field, Cross field configuration; Electron refraction, Electron lens. Cathode ray oscilloscope and its application. **(Contemporary Issues related to Topic)**

#### Unit VI: Magnetic Materials & Superconductors

(6 Hrs.)

Introduction to magnetic materials, Interpretation of Hysteresis curves, Superconductors: Type-I and Type-II, Meissner effect, Applications. **(Contemporary Issues related to Topic)**

**Total Lecture 40 Hours**

|             |                      |          |                 |         |                                      |

### I SEMESTER

### 23GE1109 : Lab. Engineering Physics

#### Course Outcomes:

#### Upon successful completion of the course the students will be able to

1. Correlate fundamentals of quantum mechanics to solve problems dealing with quantum particles.
2. Assess the characteristics of semiconductor materials in terms of crystal structures, charge carriers and Energy bands.
3. Examine the intensity variation of light due to interference, diffraction, laser and its applications.
4. Analyze the motion in electric field and magnetic field and its applications to electron optic devices.
5. Illustrate the nature and characterization of magnetic materials and superconductors for engineering Applications.

#### List of Experiments :

| Sr. No. | Experiments based on                                                                                          |
|---------|---------------------------------------------------------------------------------------------------------------|
| 1       | Determination of Planck's constant.                                                                           |
| 2       | Study of Tunnel Diode.                                                                                        |
| 3       | Determination of Hall coefficient and density of charge carriers using Hall effect.                           |
| 4       | Dependence of Hall coefficient on temperature.                                                                |
| 5       | Determination of Band gap in a semiconductor by four probe method.                                            |
| 6       | Determination of Band gap in a semiconductor using reverse biased p-n junction diode.                         |
| 7       | Determination of radius of curvature of Plano convex lens using Newton's rings.                               |
| 8       | Determination of thickness of thin paper using air wedge.                                                     |
| 9       | Determination of wavelength of sodium light using diffraction grating.                                        |
| 10      | Determination of wavelength of laser using diffraction grating.                                               |
| 11      | Determination of divergence of laser beam.                                                                    |
| 12      | Determination of amplitude and frequency of sinusoidal signal using CRO.                                      |
| 13      | To measure the phase shift introduced by a phase shift network using Dual beam CRO.                           |
| 14      | Determination of the velocity of Ultrasonic waves in a non -electrolytic liquid by ultrasonic interferometer. |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## I SEMESTER

### 23ME1101 : Engineering Graphics

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Construct orthographic drawing and isometric drawing of a given object
2. Evaluate Projections of various One Dimensional, Two dimensional, Three dimensional objects
3. Develop the lateral surfaces of various solids, their section and intersection.
4. Practice the use of software tools used for Two dimensional drawings.

#### Unit I: Theory of Orthographic Projections:

(3 Hrs.)

Introduction, Quadrant system, Theory of orthographic projection, Projection method and principal planes, First and Third angle projections,

#### Unit II: Theory of Isometric Projections:

(2 Hrs.)

Theory of isometric projection, Method for drawing isometric views, Different problems on isometric projections.

#### Unit III: Lines:

(2 Hrs.)

Projection of points, Projection of lines, True lengths and inclinations, apparent lengths and inclinations, various positions of lines in different quadrants, Traces of lines, projection of line on auxiliary plane.

#### Unit IV: Planes and Solids:

(4 Hrs.)

Projection planes: (Polygonal Lamina, Circular Lamina), Projection of Perpendicular planes and oblique planes. Auxiliary views (Auxiliary planes) Projection of Solids :(Inclined to One Plane Only) - Polyhedra (Regular and Irregular Polyhedra), Solids of Revolution

#### Unit V: Section of Solids and Development of Surfaces:

(2 Hrs.)

Types of Section planes, Sectional top view, True shape.  
Development of different solids using Radial line and parallel line methods.

#### Unit VI: Intersection of Surfaces of solids:

(2 Hrs.)

Intersection between similar solids, Intersection between dissimilar solids, Lines and Curves of Intersection.

**Total Lecture 15 Hours**

### I SEMESTER

### 23ME1102 : Lab. Engineering Graphics

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Construct orthographic drawing and isometric drawing of a given object
2. Evaluate Projections of various One Dimensional, Two dimensional, Three dimensional objects
3. Develop the lateral surfaces of various solids, their section and intersection.
4. Practice the use of software tools used for Two dimensional drawings.

#### Practical's to be performed from the list as below

| SN                | Experiments based on                                                                    | No.of Practical's |
|-------------------|-----------------------------------------------------------------------------------------|-------------------|
| 1                 | Introduction of AutoCAD Basic Commands                                                  | 02                |
| 2                 | Orthographic Projection                                                                 | 03                |
| 3                 | Isometric Projection                                                                    | 03                |
| 4                 | Projection of Straight Line                                                             | 03                |
| 5                 | Projection of Planar Surface                                                            | 03                |
| 6                 | Projection of Solid                                                                     | 03                |
| 7                 | Section and Development of Solid                                                        | 04                |
| 8                 | Intersection of Surfaces                                                                | 03                |
| 9                 | Drawing Sheet 1: Convention for various lines, Dimensioning and Orthographic Projection | 02                |
| 10                | Drawing Sheet 2: Projection of line, planar surface or solid. (Any one)                 | 02                |
| Total Practical's |                                                                                         | 28 Hours          |

|             |                      |          |                 |         |                                      |

## I SEMESTER

### 23EL1101 : Basic Electrical and Electronics Engineering

#### Course Outcomes:

1. Understand the fundamental concepts of Analog Electronic and Electrical Circuits
2. Apply the concepts of Electrical and Electronic Circuits to obtain the desired parameter
3. Analyze analog Electrical Circuits for given application.
4. Analyze analog Electronic Circuits for given application

#### Unit I: Circuit Elements and Energy Sources

(7 Hrs.)

Circuit Elements, Series and Parallel Combination of Resistances, Inductance and Capacitances, Energy Sources, Source Transformation, Sources with Periodic Waveforms, A.C. in Inductance and Capacitance, Star-Delta Connection. **(Contemporary Issues related to Topic)**

#### Unit II: Analysis of Network

(7 Hrs.)

Kirchhoff's Laws, Current Division, Voltage Division, Nodal and Mesh Analysis of Electric Circuits, Thevenin's Theorem **(Contemporary Issues related to Topic)**

#### Unit III: Generator and Motors

(7 Hrs.)

Introduction to Generator, Construction, working principle, Types of Generators, Introduction to DC Motor, Working Principle of DC Motor, Types of Motors. **(Contemporary Issues related to Topic)**

#### Unit IV: Diode and Transistor

(6 Hrs.)

Introduction to Semiconductor, P-N junction diodes, Biasing & Characteristics of diodes. Diode Circuits - Half wave rectifier, full wave rectifier, bridge rectifier. Introduction to BJT- NPN and PNP, Modes of operation,. **(Contemporary Issues related to Topic)**

#### Unit V: Operational Amplifier and Its Application

(7 Hrs.)

Introduction to Op-Amp, Inverting and Non-Inverting Amplifier, Linear Applications of OP-AMP like adder, Subtractor, integrator, differentiator and non-linear application using Comparator. **(Contemporary Issues related to Topic)**

#### Unit VI: Electronics Measurement

(6 Hrs.)

Introduction to Measurement System, Generalized block diagram of Measurement System, Static & dynamic characteristics of measurement system, Types of errors & their sources, Statistical analysis. **(Contemporary Issues related to Topic)**

**Total Lecture 40 Hours**

## I SEMESTER

### 23ME1107 : Lab. FAB Shop

#### Course Outcomes :

**Upon successful completion of the course the students will be able to:**

1. Interpret the general safety/precautions on shop floor; identify and use the different materials, machines and measuring and cutting tools.
2. Practice on manufacturing of components using workshop trades including fitting, plumbing, carpentry, smithy/foundry and welding, etc.
3. Demonstrate practical knowledge of the dimensional accuracies and tolerances applicable for different manufacturing processes.
4. Produce simple/small devices of their interest in project/product development or research purpose.

| Sr.No | Experiments based on                                                                                                                                                              | CO  | Level |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-------|
| 1     | Study and demonstration of safety norms, unfair practices, meaning of different signs/symbols and use of fire extinguishers                                                       | I   | L-II  |
| 2     | Study and demonstration of different materials, devices/machines, cutting and measuring devices used in fitting, plumbing, carpentry, smithy/foundry, welding and machining shop. | I   | L-II  |
| 3     | Create simple job/part/pattern in fitting, plumbing, carpentry, smithy/foundry and welding shop.                                                                                  | II  | L-III |
| 4     | Elaborate the created job/part/pattern with proper justification of its dimensional accuracies and tolerances.                                                                    | III | L-III |
| 5     | Case study: To prepare simple/small models (Group Activity)                                                                                                                       | IV  | L-III |

## I SEMESTER

### 23ME1105 : Material Science & Metallurgy

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

1. Distinguish between ferrous and Non-ferrous materials. Illustrate crystal structures for various materials and Differentiate or Distinguish between ferrous and Non-ferrous materials.
2. Interpret Iron-Iron carbide equilibrium diagram and analyse microstructure, general properties of commercial steels and Cast Iron.
3. Discuss the various heat treatment processes for steels.
4. Demonstrate the basics of powder Metallurgy for powder metallurgical components.

#### Unit I:

**(7 Hrs.)**

Introduction to materials, classification of materials. Properties and applications of materials. Crystalline nature of metals, specially microscopic and macroscopic examinations of metals. Alloys and solid solutions, types and their formations, modified Gibbs's phase rule, Lever rule for phase mixtures and their application in system.

#### Unit II:

**(6 Hrs.)**

Study of equilibrium diagrams and invariant reactions. Iron-Iron carbide equilibrium diagram, critical temperatures. Microstructure of slowly cooled steels. Estimation of carbon from microstructures; structure property relationship. Welding Metallurgy and solidification.

#### Unit III:

**(6 Hrs.)**

Classification and application of plain carbon steels. Examples of alloy steel such as Hadfield Manganese Steel, ball Bearing Steels, etc. Effect of alloying elements. Tool Steels – Classification, composition, application and commercial heat treatment practice for HSS, Secondary hardening. Stainless Steels - Classification, composition, application and general heat treatment practice for Stainless Steels.

#### Unit IV:

**(7 Hrs.)**

Heat treatment and its importance. Annealing, Normalizing, Hardening, Quench Cracks, Hardenability test. TTT diagram and its construction and related Heat Treatment Processes such as Austempering, Martempering, Patenting etc. Retention of Austenite, Effects and elimination of retained austenite, Tempering. Case / Surface hardening treatments such as Carburising, Nitriding, Cyaniding, Carbonitriding, Flame and Induction hardening.

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>(7 Hrs.)</b> |
| Cast Iron – Classification, White cast Iron, Gray Cast Iron, Nodular Cast Iron, Malleable Cast Iron, Chilled and alloy Cast Iron. (Production route, Composition, Microstructure and applications) Effects of various parameters on structure and properties of Cast Iron, Alloy cast Iron such as Ni-resist, Ni-hard. Non-Ferrous Alloys – Study of non-ferrous alloys such as brasses (Cu-Zn diagram), Bronzes (Cu-Sn diagram), Aluminum Alloys (e.g. Al-Si & Al-Cu diagram), Bearing materials. |                 |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>(6 Hrs.)</b> |
| Powder Metallurgy: Powder manufacture and Conditioning, Production of Sintered Structural Components, Self lubricating bearing, Cemented Carbides, Ceramics, Sintered Carbide cutting tools.                                                                                                                                                                                                                                                                                                       |                 |

# Yeshwantrao Chavan College of Engineering

(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)

**B. Tech SoE and Syllabus 2023**

(Scheme of Examination w.e.f. 2023-24 onward)

(Department of Mechanical Engineering)

## B.Tech in Mechanical Engineering

**SoE No.  
23ME-101**

### I SEMESTER

### 23ME1106 : Lab. Material Science & Metallurgy

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Distinguish between ferrous and Non-ferrous materials. Illustrate crystal structures for various materials and Differentiate or Distinguish between ferrous and Non-ferrous materials.
2. Interpret Iron-Iron carbide equilibrium diagram and analyse microstructure, general properties of commercial steels and Cast Iron.
3. Discuss the various heat treatment processes for steels.
4. Demonstrate the basics of powder Metallurgy for powder metallurgical components.

#### Minimum Five Practical's to be performed from the list as below

| SN  | Experiments based on                                                                                    |
|-----|---------------------------------------------------------------------------------------------------------|
| 1   | Study of Metallurgical Microscope.                                                                      |
| 2   | Preparation of Specimen for metallographic examinations.                                                |
| 3   | Study and drawing of microstructures of Steels.                                                         |
| 4   | Study and drawing of microstructures of Cast Iron                                                       |
| 5   | Study and drawing of microstructures of Non Ferrous Metals.                                             |
| 6   | Study of the effect of annealing and normalizing on properties of steels.                               |
| 7   | Determination of hardenability of steels by Jominy End Quench test.                                     |
| 8   | Measurement of hardness of ferrous and non-ferrous materials with the help of Brinell hardness tester.  |
| 9   | Measurement of hardness of ferrous and non-ferrous materials with the help of Rockwell hardness tester. |
| 10  | Study the heat treatment of high speed steels.                                                          |
| 11  | Study of mechanisms of quenching.                                                                       |
| 12. | Study of Pack carburizing of steel samples.                                                             |
| 13. | Study of effect of alloying elements on properties of steel.                                            |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B.Tech in FYC

### I SEMESTER

### 23GE1117-Get Set Go

#### Course Outcomes:

**Upon successful completion of the course the students will be able to**

1. Students will understand the importance of building trust in communication and learn how to use the 3Vs of communication (Visual, Vocal, Verbal) to energize their interactions.
2. The course will focus on leadership principles and styles, emphasizing how effective communication can motivate others and gain willing cooperation. Students will participate in activities like skits and team presentations to demonstrate their leadership skills.
3. The course will equip students with team management and organization skills, enabling them to lead and participate in team-building activities effectively.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                |                   |

MSEs\* = Two MSEs of 15 Marks each will be conducted and marks of these 2 MSEs will be considered for Continuous Assessment

TA\*\* = for Theory : TA1-5 marks on Proctored Online Exam, TA2-12 marks on activities decided by course teacher, TA3 - 3 marks on class attendance

TA\*\* = for Practical : MSPA will be 15 marks each

## B.Tech First Year

### II SEMESTER

### 23GE1201: Calculus and Vector

#### Course Outcomes :

##### The students will be able to

1. Apply the knowledge of differentiation to solve the Engineering problems.
2. Determine the derivatives of functions of several variables and develop the relations among the derivatives of variables.
3. Apply the knowledge of Beta and Gamma functions to find area, volume and mass.
4. Discuss Calculus of Scalar and vector point function and use appropriate theorems to evaluate integrals of functions of single and multiple variables.

#### Unit I: Differential Calculus

(6 Hrs.)

Successive differentiation,  $n^{\text{th}}$  derivative of rational function, Trigonometrical transformations,  $n^{\text{th}}$  derivative of the product of two functions (Leibnitz's theorem), Taylor's theorem, Use of Maclaurin's theorem for one variable, standard expansions, Examples on Taylor's Theorem. **(Contemporary Issues related to Topic)**

#### Unit II: Partial Differentiation

(7 Hrs.)

Functions of several variables, First and higher order derivatives, Homogeneous functions, Euler's theorem on homogeneous function, Chain rule and total differential coefficient of composite functions. Jacobians. **(Contemporary Issues related to Topic)**

#### Unit III: Integral Calculus

(6 Hrs.)

Improper integrals: Gamma and Beta functions, applications of integral calculus in computing area, length, volumes, and surface of solids of revolutions. **(Contemporary Issues related to Topic)**

#### Unit IV: Multiple integrals

(6 Hrs.)

Double integral, change of order of integral, change of variables, triple integrals and its applications. **(Contemporary Issues related to Topic)**

#### Unit V: Vector Calculus

(7 Hrs.)

Vector fields, Vector differentiation, Gradient, Divergence and Curl, Directional derivatives with physical interpretation, Solenoidal and irrotational motions. **(Contemporary Issues related to Topic)**

#### Unit VI: Vector Integration & Applications

(7 Hrs.)

Vector integration: Line, surface and volume integrals, Statement of Stoke's theorem, Gauss divergence theorem and Green's theorem (without proof), Simple applications of these theorems. **(Contemporary Issues related to Topic)**

**Total Lecture 39 Hours**

## I/II SEMESTER

### 23GE1104/23GE1204: Applied Chemistry

#### Course Outcomes:

Upon successful completion of the course the students will be able to:

1. **Build** the knowledge of qualitative and quantitative aspects of water for industrial and domestic applications. (L3)
2. **Apply** fundamental principles of electrochemistry to understand corrosion, energy storage devices and their industrial applications. (L3)
3. **Develop** insight into engineering materials for industrial applications. (L3)
4. **Utilize** knowledge of advanced engineering materials for technological applications. (L3).

#### Unit I: Water Chemistry

(8 Hrs.)

Introduction, Potable water quality parameters. Hardness, Types of hardness. Sterilization. Desalination of water by R.O. Softening of water by Zeolite process and Ion Exchange Process (principle, advantages, and limitations). Numerical based on Hardness and Zeolite process. Boiler trouble (Scale and sludge). Contemporary issues related to the topic

#### Unit II: Electrochemistry

(8 Hrs.)

Introduction, Redox reactions, EMF of a cell, standard electrode potential, Nernst equation, numerical and applications to chemical cells. Conductance in electrolytic solutions, specific and molar conductivity, variations of conductivity with concentration, Electrolysis, laws of electrolysis and numerical.

Industrial applications: Electroplating, Electrolytic refining.

**Corrosion:** Definition, Causes, theories of corrosion- dry, wet and differential aeration.

Contemporary issues related to the topic

#### Unit III: Energy storage devices

(7 Hrs.)

**Battery:** Introduction, Characteristics, and General applications

Lithium-ion battery, Glass battery,  $H_2$ - $O_2$  Fuel cell. Differences between Battery and Fuel cell. Recycling and safe disposal of batteries.

**Supercapacitors:** Definition, Types, Characteristics, and Application.

**$H_2$  as a green fuel:** Introduction, Production, Storage, and Utilization. Contemporary issues related to the topic

#### Unit IV: Fuels

(8 Hrs.)

Introduction, Calorific value, HCV & LCV. Determination of calorific value of fuels by Bomb & Boy's calorimeter. Dulong's formula Numerical.

Significance of Proximate and Ultimate analysis.

Knocking in Internal combustion petrol and diesel engines, Octane and Cetane number, Knocking and its relationship with structure of fuels. Catalytic cracking & advantages. Contemporary issues related to the topic

#### Unit V: Engineering Materials

(7 Hrs.)

**Cement:** Introduction, Manufacturing of Portland cement. Role of microscopic constituents. Properties-setting and hardening, heat of hydration and soundness. Types of cement-Rapid hardening cement, Low heat cement, High alumina cement. Ready-mix concrete.

|             |                                                                                     |                                                                                     |                 |         |                                      |

(Department of Applied Chemistry)

## B.Tech in ME/CV/EE/ETC/EL/VLSI

SoE No.  
23FY-101

**Lubricants:** Introduction, Classification, Mechanism of Lubrication.

Properties & Significance of liquid lubricants—Viscosity and viscosity index, Flash and fire point, Cloud and pour point, Aniline point, acid value, saponification number. Numerical on V.I. Contemporary issues related to the topic.

### Unit VI: Advanced Materials

(7 Hrs.)

**Nanomaterials:** Definition, Carbon Nanotubes and types. Applications of Nanomaterials in Electronics, Environment and Medicine.

**Liquid Crystal Polymers:** Introduction, General properties and applications.

**Polymers in electronic industries:** Introduction, Piezo, pyroelectric, Ferroelectric polymers.

**Smart materials:** Introduction, Properties and applications of Chromoactive, Photoactive and Magneto rheological materials.

**Spectroscopic techniques:** Introduction and applications. Contemporary issues related to the topic

Total Lecture 45 Hours

### Textbooks:

1. S S. Dara , A Text book of Engineering Chemistry , S.Chand & Co New Delhi. Eleventh Edition.
2. P.C. Jain and Monica Jain , Engineering Chemistry , Dhanpat Rai & sons New Delhi , Sixteenth Edition.
3. P. W. Atkins, Physical Chemistry ,Oxford Publications, Eighth edition .

### Reference Books:

1. Eskel Nordell , Water treatment for industrial and other use ,Rein hold Publishing Corporation, New York.
2. Lloyd A.Munro, Chemistry in Engineering, Prentice-hall, Inc Nj, 2nd Edition.

## I/II SEMESTER

### 23GE1105/23GE1205: Applied Chemistry Lab

#### Course Objectives (PR)

- 1) Develop analytical ability.
- 2) Integrate chemistry fundamentals with practical applications.

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. **Apply** the knowledge of quantitative and qualitative chemical analysis to perform record and analyze the results. (L3)
2. **Experiment** with instrumental and analytical techniques in Chemistry to solve engineering problems related to sustainability. (L3)
3. **Write** effective reports and communicate through oral presentations. (L3)
4. **Review** and apply laboratory safety protocols and procedures to acquire the ability for independent and lifelong learning. (L3)

**Total 9 experiments are to be performed**  
(4 each from Lab I and Lab II and one demonstration experiment )

| SN                                 | Experiments based on                                                                                      |

## B.Tech First Year

### II SEMESTER

### 23GE1212 : Professional Communication

#### Course Outcomes :

**Upon successful completion of the course the students will be able to:**

1. Apply different modes for effective communication
2. Produce competently the Phonology of English language
3. Apply nuances of LSRW skills
4. Practice Communication through different channels

#### Unit I: Basics of Communication

(6 Hrs.)

Process of Communication, Levels of Communication, Flow of Communication, Networks of Communication, Classification of Barriers (Intrapersonal, Interpersonal, Organizational).

#### Unit II: English Phonetics

(7 Hrs.)

Speech Mechanism, Organs of speech, Consonant and Vowels sounds symbols, word stress rules

#### Unit III: Presentation & Interview Skills

(6 Hrs.)

Presentation-Nuances of presentation- Kinesics, Proxemics, Chronemics, Vocalics, Modes of Presentation,

Interview-Purpose, expectations of employer and preparation for Interview, Types, Types of Questions & Answering Techniques, Telephonic Interviews – preparation and guidelines

#### Unit IV: Technical Reports, Memo & E-Mail Etiquettes

(7 Hrs.)

Report -Types, Characteristics, prewriting aspects of report and preparing writing of reports

Memo- Objectives, Types, Structure and Layout

Email-Etiquette, acronyms.

**Total Lecture 26 Hours**

#### Textbooks:

1. Meenakshi Raman & Sangeeta Sharma, Technical Communication, Raman & Sharma, Oxford University Press Orford University Press

## B.Tech in Civil Engineering

### II SEMESTER

### 23CV1201 : Engineering Mechanics

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

1. Describe the fundamental concepts of statics and dynamics.
2. Apply the basic concepts of applied mechanics for solution of problems on planar force system.
3. Determine the properties of surface like centroid, moment of inertia, etc. for planar surfaces and mass moment of inertia for rigid body.
4. Analyze pin jointed truss frame structure and beam structure analytically and graphically.
5. Evaluate the dynamic variables of kinetics of particles and simple lifting machine

#### Unit I: Resultant of planar force System

(7 Hrs.)

Fundamental concepts, system of forces, laws of mechanics, principle of transmissibility of force, Moment of force, Principle of moment, Couple, Resultant of a planar force system, Equivalent force couple system. **(Contemporary Issues related to Topic)**

#### Unit II: Equilibrium of planar force System

(6 Hrs.)

Free body diagrams, Conditions of equilibrium, types of supports, types of beams, types of loads on beam, Equilibrium of a planar force system **(Contemporary Issues related to Topic)**

#### Unit III: Friction and Trusses

(7 Hrs.)

Friction: Coulomb's laws of dry friction, plane friction, belt friction.  
Trusses: Types of trusses, assumptions in analysis of truss, Analysis of truss by method of joint. **(Contemporary Issues related to Topic)**

#### Unit IV: Properties of Surfaces

(6 Hrs.)

Centroid: Introduction, First Moment of Area, Centroid of composite areas.  
Moment of Inertia: Introduction, Second Moment of Area, Polar moment of Inertia, Radius of Gyration, Transfer formula for moment of Inertia, Product of Inertia, Moment of Inertia, and product of inertia for composite areas, Principal Moments of Inertia. **(Contemporary Issues related to Topic)**

#### Unit V: Virtual Work Method and Kinetics of Particle

(7 Hrs.)

Virtual Work Method: Introduction, Principle of virtual work, Application to beam and frame.  
Kinetics of Particle: Introduction, Newton's law of motion for a Particle, D'Alembert's principle, Translation of particle and connected system. **(Contemporary Issues related to Topic)**

#### Unit VI: Work Energy and Impulse Momentum Method

(6 Hrs.)

Work Energy Method: Introduction, Work energy equation for translation, Work energy applied to particle motion and connected system.  
Impulse Momentum Method: Introduction, Linear Impulse momentum, Conservation of linear momentum, coefficient of restitution, elastic impact, Impulse momentum in plane motion. **(Contemporary Issues related to Topic)**

**Total Lecture 39 Hours**

## B.Tech in Civil Engineering

### II SEMESTER

### 23CV1202 : Lab. Engineering Mechanics

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. Describe the fundamental concepts of statics and dynamics.
2. Apply the basic concepts of applied mechanics for solution of problems on planar force system.
3. Determine the properties of surface like centroid, moment of inertia, etc. for planar surfaces and mass moment of inertia for rigid body.
4. Analyze pin jointed truss frame structure and beam structure analytically and graphically.
5. Evaluate the dynamic variables of kinetics of particles and simple lifting machine

Minimum Eight Practical's to be performed from the list as below

| SN  | Experiments based on                                                                                                                                                              |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1   | To find determine the support reactions of a Simply Supported Beam experimentally and analytically.                                                                               |
| 2   | To determine the forces in the members of a Jib Crane Apparatus experimentally and graphically.                                                                                   |
| 3   | To determine the coefficient of friction between two surfaces of different material on Plane Friction Apparatus.                                                                  |
| 4   | To determine the coefficient of friction of Coil Friction Apparatus.                                                                                                              |
| 5   | To determine the forces in members of a Shear Leg Apparatus experimentally and manually.                                                                                          |
| 6   | To determine the mass moment of inertia of a fly wheel using Fly Wheel Apparatus                                                                                                  |
| 7   | To determine efficiency and law of machine of Differential Axel & Wheel machine.                                                                                                  |
| 8   | To determine efficiency and Law of machine of Single Purchase Crab machine.                                                                                                       |
| 9   | To determine efficiency and Law of machine of Double Purchase Crab machine.                                                                                                       |
| 10  | To verify law of polygonal of forces using Law of Polygon Apparatus.                                                                                                              |
| 11  | To find support reactions of a simply supported beam using graphical method and hand calculation.                                                                                 |
| 12. | To find the forces in the member of truss using graphical method and hand calculation.                                                                                            |
| 13. | To find (1) Principle moment of inertia and (2) Moment of inertia and product of inertia about any inclined axis for a composite figure using Mohr's circle and hand calculation, |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

### II SEMESTER

### 23IT1203 : Programming for Problem Solving

#### Course Outcomes :

- 1) Understand the basics of computer system operations and algorithms, flowcharts.
- 2) Apply the basics of C programming for problem solving.
- 3) Apply and analyze the different dimensional arrays for problem solving.
- 4) Understand the basics of string, structure, and union and apply them to problem solving.

#### Unit I: Computer System Basics:

(3 Hrs.)

Basics of programming and problem solving. Introduction to algorithms and flowcharts, Types of programming errors, basic input/output statements and functions (scanf, printf, getch, putch, gets, puts ), Introduction to library functions,

#### Unit II: Basic of C Programming

(6 Hrs.)

**Basic building blocks of C:** Character set, variables, identifiers & keywords, Data types, Operators: arithmetic, logical and relational operators, , bitwise operators, precedence of operators, Expressions, sizeof() operator, constants, typedef statement, writing straight line programs. Decision control statements: if, if - else and nested if-else statements, else-if ladder statement, switch-case control statement.

#### Unit III: Loop Structures:

(5 Hrs.)

While, do while and for loops, break and continue statement, “goto” statement, real life programming examples based on these loop structures, real life programming examples.

#### Unit IV: Modular Programming:

(6 Hrs.)

Concept of functions, user defined functions, function prototypes, formal parameters, actual parameters, return types, call by value , call by reference, C programs using functions, Recursive functions, comparing recursion against iteration, C programs using recursive functions, real life programming examples

#### Unit V: Arrays:

(6 Hrs.)

One dimensional array, array manipulation, insertion, deletion of an element, searching techniques- Linear and binary search, sorting technique – Bubble sort. Two-dimensional arrays: matrix representation, programs for basic matrix operations such as addition, multiplication and transpose, Array as function arguments. real life programming examples

#### Unit VI: String, Structure and Union:

(4 Hrs.)

Strings: string representation and string handling functions, Introduction to pointer, structure and union. real life programming examples

**Total Lecture 30 Hours**

| <b>Unit I: Computer System Basics:</b>                                                                                                                                                                                                                                                                                                                                                                                                   | <b>(3 Hrs.)</b> |
| Basics of programming and problem solving. Introduction to algorithms and flowcharts, Types of programming errors, basic input/output statements and functions (scanf, printf, getch, putch, gets, puts ), Introduction to library functions,                                                                                                                                                                                            |                 |
| <b>Unit II: Basic of C Programming</b>                                                                                                                                                                                                                                                                                                                                                                                                   | <b>(6 Hrs.)</b> |
| <b>Basic building blocks of C:</b> Character set, variables, identifiers & keywords, Data types, Operators: arithmetic, logical and relational operators, , bitwise operators, precedence of operators, Expressions, sizeof() operator, constants, typedef statement, writing straight line programs. Decision control statements: if, if - else and nested if-else statements, else-if ladder statement, switch-case control statement. |                 |
| <b>Unit III: Loop Structures:</b>                                                                                                                                                                                                                                                                                                                                                                                                        | <b>(5 Hrs.)</b> |
| While, do while and for loops, break and continue statement, “goto” statement, real life programming examples based on these loop structures, real life programming examples.                                                                                                                                                                                                                                                            |                 |
| <b>Unit IV: Modular Programming:</b>                                                                                                                                                                                                                                                                                                                                                                                                     | <b>(6 Hrs.)</b> |
| Concept of functions, user defined functions, function prototypes, formal parameters, actual parameters, return types, call by value , call by reference, C programs using functions, Recursive functions, comparing recursion against iteration, C programs using recursive functions, real life programming examples                                                                                                                   |                 |
| <b>Unit V: Arrays:</b>                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>(6 Hrs.)</b> |
| One dimensional array, array manipulation, insertion, deletion of an element, searching techniques- Linear and binary search, sorting technique – Bubble sort. Two-dimensional arrays: matrix representation, programs for basic matrix operations such as addition, multiplication and transpose, Array as function arguments. real life programming examples                                                                           |                 |
| <b>Unit VI: String, Structure and Union:</b>                                                                                                                                                                                                                                                                                                                                                                                             | <b>(4 Hrs.)</b> |
| Strings: string representation and string handling functions, Introduction to pointer, structure and union. real life programming examples                                                                                                                                                                                                                                                                                               |                 |
| <b>Total Lecture</b>                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>30 Hours</b> |

### List of Practical

| SN   | Unit | Name Of The Practical                                                       | Remark                 | CO'S Mapped | PO'S Mapped   |
|------|------|-----------------------------------------------------------------------------|------------------------|-------------|---------------|
| 1(A) |      | Introduction to Linux Operating system & it's different commands.           | Manual                 | CO 1        | PO1           |
| 1(B) |      | Introduction to Vi editor, Compilation and Execution of a program in Linux. | Manual                 | CO 1        | PO1           |
| 2    | II   | Practical based on Arithmetic and Conditional operators.                    | Operators              | CO 1        | PO1           |
| 3    | II   | Practical based on Conditional and Unconditional Statements.                | Conditional Statements | CO 1        | PO1           |
| 4    | III  | Practical based on Entry Controlled Looping Statements.                     | For / While Loop       | CO 2        | PO 1, PO 2    |
| 5    | III  | Practical based on Exit Controlled Looping Statement                        | Do while Loop          | CO 2        | PO 1, PO 2    |
| 6    | IV   | Practical based on Functions and Recursion.                                 | Functions / Recursion  | CO 3        | PO2, PO3      |
| 7    | V    | Practical based on 1-D Array.                                               | 1D Array               | CO 3        | PO2, PO3      |
| 8    | V    | Practical based on 2-D Array.                                               | 2D Array               | CO 3        | PO2, PO3      |
| 9    | VI   | Practical based on Strings.                                                 | Strings & Pointers     | CO 3        | PO2, PO3      |
| 10   | VI   | Practical based on Structures.                                              | Structures             | CO 4        | PO1, PO2, PO3 |

## B.Tech First Year

### II SEMESTER

### 23GE1218 : Functional English

#### Course Outcomes:

**Upon successful completion of the course the students will be able to**

1. Understand the concept of FE (Functional English) and its application in various real-life scenarios.
2. Develop basic interactive communication skills, including greetings, asking for information, stating opinions, and providing feedback.
3. Acquire knowledge of social networking, texting, instant messaging, blogs, and discussion boards, along with the ethical considerations associated with online communication.
4. Successfully complete quizzes and assignments assessing knowledge in the covered topics of FE, social media, tenses, and effective communication.

| Unit:1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Introduction to Functional English    | 6 Hours |

## I & II SEMESTER

### Audit Course

### GE2301 : Disaster Management and Preparedness

#### Course Outcomes :

Upon successful completion of the course, the students will be able to

**CO1:** Explain the basic concepts, classifications and causes of disasters.

**CO2:** Identify the impacts of disasters on society, environment and economy.

**CO3:** Describe disaster risk reduction measures and disaster management practices.

**CO4:** Explain sustainable recovery methods and accessibility measures during disasters.

**Unit:1 Introduction to Disasters** 7 Hours

Definition and Classification: Natural and Man-made disasters; Concepts: Hazard, vulnerability, risk, resilience, capacity building; Disaster Cycle: Preparedness, response, recovery, mitigation; Brief about Global and Indian perspectives: Case studies

**Unit:2 Common Disasters and Their Safety Measures** 6 Hours

Natural Disasters : Earthquakes, Landslides, Tsunamis, Floods, Glacial lake outburst floods (GLOFs) ; Volcanic Eruptions Types, monitoring, volcanic hazards ; Cloud burst, Cyclones & Storm Surges, Classification, impacts, prediction ; Forest Fires: Causes, spread, control measures; Desertification and Droughts: Types, causes, and management; Anthropogenic Disasters: Industrial & Chemical Accidents; Nuclear Hazards , safety measures; Urban Disasters: Building collapses, fires ; Environmental Pollution: Air, water, soil contamination incidents

**Unit:3 Disaster Impacts and Disaster Preparedness** 7 Hours

Disaster impacts: (environmental, physical, social, ecological, economic, political, etc.); health, psycho-social issues; demographic aspects (gender, age, special needs); hazard locations; global and national disaster trends; climate change and urban disasters.

Emergency preparedness: Evacuation, emergency kits, and communication; Early warning systems and basic use of GIS in disaster management; relief and rehabilitation: Temporary shelters and community support.

**Unit:4 Disaster Management & Policies, Institutions, and Governance** 6 Hours

Disaster Management Act, 2005 and amendments – Overview, National and State Disaster Management Authorities (NDMA & SDMA), Disaster Risk Reduction (DRR) and the Sendai Framework, Role of Government, NGOs, and Community in disaster management, Responsibilities of citizens and engineers during disasters.

Total Lecture 26 Hours

### III SEMESTER

### 23GE1301: Fundamentals of Management & Economics

#### Course Outcomes:

Upon successful completion of the course the students will be able to

1. Develop the Managerial Perspective and perform the various functions of management for optimum utilization of Engineering Resources
2. Identify and Analyze the role of Financial Accountancy and Marketing Management in the Organization
3. Develop perspective about economy based on logical reasoning and estimate the economic outcomes.
4. Interprets comparative advantage of resources.

#### Unit I:

**7 Hrs.**

**Principles of Management:** Evolution of Management Thought: Scientific and Administrative Theory of Management, Definition and Concept of Management, Functions of Management: Planning, Organizing, Directing, Staffing and Controlling, Motivational Theories, Concept of Leadership.

#### Unit II:

**8 Hrs.**

**Marketing and Financial Management:** Marketing and Financial Management –Marketing Theories and Concept-Marketing Mix, Market Segmentation, Targeting and Positioning and Functions Financial Management and Accountancy- Accountancy Rules and Capital, Preparation of Books of Account- Journal posting of Transaction into ledger and preparation of trial Balance, Introduction of Trading Account, Profit and loss account and balance sheet.

#### Unit III:

**7 Hrs.**

**Introduction to Microeconomics:** Nature and Scope of Microeconomics, Demand Analysis: Meaning and determinants of demand, law of demand, Elasticity of Demand - types and degrees, Utility analysis, Law of diminishing marginal utility, supply- law of supply, Law of Variable proportions and Return to Scale, Classification of market structure.

#### Unit IV:

**8 Hrs.**

**Introduction to Macroeconomics:** Nature and Scope of Macroeconomics, Concept of GDP, GNP, NDP, NNP, Measurement of GDP; Economic Growth and development, Money – definition, types and function of money, Inflation – meaning, types, causes and measure to control, concept of deflation, functions of central and commercial bank, Sources of public revenue - direct and indirect taxes.

**Total Lecture 30 Hours**

## B. Tech in Mechanical Engineering

### III SEMESTER

### 23ME1301 : Computer Aided Design

#### Course Outcomes :

Upon successful completion of the course, the students will be able to;

1. Describe the fundamental concepts of CAD tools.
2. Apply the basic concepts of 2D and 3D transformation for solving engineering problems.
3. Analyze the importance of computer graphics for plotting curves.
4. Evaluate the use of different data exchange formats as per the applications.

|                                                                                                                                                                                                                                          |                               |

### III SEMESTER

### 23ME1303 : Manufacturing Processes

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

1. The student will be able to illustrate the moulding process and compare various casting processes.
2. The student will be able to analyse various Forming processes and become familiar with the working of dies.
3. The student will be able to evaluate different welding processes.
4. The student will be able to describe unconventional machining processes.

#### Unit I:

**7 Hrs.**

**Casting Process:** Introduction, Pattern making: Types, materials used, Pattern making allowances, color codes. Core making: - Types, core material & its properties. Molding: Types of sand molds, molding sand composition, molding sand properties, molding machines. Gating design – Elements of gating systems, pouring time, riser design (Analytical treatment). Real time estimation of pouring time for casting.

#### Unit II:

**7 Hrs.**

**Foundry mechanism:** Special casting processes such as investment Casting, Centrifugal Casting, Shell Molding, CO Molding, Slush Casting, Die Casting, Cleaning, inspection & casting defects. Identification of various defects and possible causes with remedies through the fish bone diagram.

#### Unit III:

**7 Hrs.**

**Forming Processes:** Mechanics of forming processes (including analytical treatment), Determination of forging forces, equipment (Hammer/Press) capacity required. Rolling, Forging, Extrusion & Wire Drawing. Melting furnaces – Types, Electric furnace, Induction furnace, Cupola-construction & operation. Prerequisite for commencing furnace operation for Cupola.

#### Unit IV:

**8 Hrs.**

**Sheet Metal Working:** Sheet Metal Working, Terminology, Types of Operation, Classification of Dies. Intro to Design Parameters and Types of Presses. Optimum utilization of metal strip in SMW

#### Unit V:

**8 Hrs.**

**Joining processes:** Introduction to Welding, Soldering, Brazing Processes. Types of Welding, Arc Welding & Gas Welding Processes, Defects & Inspection of Welding Joints, Electrodes, Weldability of Metals, Welding equipments of Fixtures. Advance Welding Methods: Introduction to TIG, MIG, spot welding, Welding Design (Analytical Treatment)- Heat Input, Heat Flow, Cooling Rate Calculations. Identification of various defects & possible causes with remedies through fish bone dig.

#### Unit VI:

**8 Hrs.**

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | June, 2024      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

**SoE No.**  
**23ME-101**

## B. Tech in Mechanical Engineering

**Jigs & fixture:** Introduction, locating & clamping - principle of location, principle of pin location, locating devices, radial or angular location, V - location, bush location. Drilling Jigs: - Types of drilling jigs - Template jig, plate type jig, open type jig, swinging leaf jig, Box type jig, channel type jig . Jig feet. Milling Fixtures: - Essential features of a milling fixtures, milling machine vice, Indexing jig & fixtures, Automatic clamping Devices

**Total Lecture**      **45 Hours**

### III SEMESTER

### 23ME1304 : Lab Manufacturing processes

#### Course Outcomes

**Upon successful completion of the course the students will be able to**

1. The student will be able to illustrate the molding process and compare various casting processes.
2. The student will be able to Analyze various Forming processes and become familiar with the working of dies.
3. The student will be able to evaluate different welding processes.
4. The student will be able to Describe unconventional machining processes

**Minimum Eight Practical's to be performed from the list as below**

| SN | Experiments based on                                                                                        |
|----|-------------------------------------------------------------------------------------------------------------|
| 1  | Preamble about Foundry practices used in industries.                                                        |
| 2  | Study of various moulding processes along with preparation of moulding sand.                                |
| 3  | Preparation of wooden pattern in pattern making shop along with study of different types of wooden pattern. |
| 4  | To determine grain fineness number of given moulding sand.                                                  |
| 5  | Demonstration of mould making along with study of foundry tools.                                            |
| 6  | Preparation of mould cavity along-with steps involved in mould making.                                      |
| 7  | Study of various types of melting furnaces and cupola in detail.                                            |
| 8  | Preparation of job on punching press and design of blanking and piercing die.                               |
| 9  | Performance on various welding machines such as MIG, TIG along-with study of different welding processes.   |
| 10 | Preparation of casting job along-with study of different casting processes.                                 |
| 11 | Report/Case Study of foundry visit.                                                                         |
| 12 | A Visit: A visit to a foundry shop for more understanding of the casting practices                          |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | June, 2024      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### III SEMESTER

### 23ME1305 : Mechanics of Materials

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Apply the basic concepts of stress, strain and their variations under different types of loading to calculate Stresses.
2. Construct bending moment, shear force diagram for statically determinate beams and determine stress distribution.
3. Compute slope and deflection in statically determinate beam and calculate strain energy under varying load conditions.
4. Evaluate the torsional shear stress in shaft and examine the buckling failure in columns

#### Unit I:

**8 Hrs.**

**Concept of simple stresses and strains :** Introduction, Stress, strain, types of stresses, stress - strain diagram for brittle & ductile material, elastic limit, Hooks law, modulus of elasticity, modulus of rigidity, factor of safety, analysis of tapered rod, analysis of composite section, thermal stress and strain, thermal stresses with heat flow in cylinders and plates. Longitudinal strain & stress, lateral stresses and strains, Poisson's ratio, volumetric stresses and strain with uni-axial, bi-axial & tri-axial loading, bulk modulus, relation between Young's modulus and modulus of rigidity, Poisson's ratio and bulk modulus. Contemporary issues

#### Unit II:

**7 Hrs.**

**Shear force and bending moments in Beam:** Types of beam (cantilever beam, simply supported beam, overhung beam etc.), Types of loads (Concentrated and UDL), shear force and bending moment diagrams for different types of beams subjected to different types of loads, sign conventions for bending moment and shear force, shear force and bending moment diagrams for beams subjected to couple, Relation between load, shear force and bending moment. Contemporary issues

#### Unit III:

**8 Hrs.**

**Stresses in beams:** Pure bending, theory of simple bending with assumptions & expressions for bending stress, derivation of bending equation, bending stresses in symmetrical sections, section modulus for various shapes of beam sections. **Shear stresses in beams:** - Concept, derivation of shear stress distribution formula, shear stress distribution diagram for common symmetrical sections, maximum and average shear stress Contemporary issues.

#### Unit IV:

**7Hrs.**

**Deflection of beams:** Derivation of differential equation of elastic curve, Deflection & slope of cantilever, simply supported, overhung beams subjected to concentrated loads, UDL, Relation between slope, deflection & radius curvature McCauley's method, area moment method to determine deflection of beam. **Strain energy and impact:** Concept of strain energy, derivation and use of expressions for

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | June, 2024      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

23ME-101**

## B. Tech in Mechanical Engineering

deformation of axially loaded members under gradual sudden and impact loads. Strain energy stored in bending & torsion. Castigliano's theorem. Contemporary issues

**Unit V:** **8 Hrs.**

**Torsion of circular shafts, Column & Struts:** Derivation of torsion equation. Torsional shear stress induced in the shaft, when it is subjected to torque. Torque transmitted by solid & hollow circular shaft. Derivation of maximum, minimum principal stresses and maximum shear stress induced in shaft when it is subjected to bending moment, torque & axial load.

**Unit VI:** **7 Hrs.**

**Combined Stresses:** Definition of principal planes & principal stresses, analytical method of determining stresses on oblique section when member is subjected to direct stresses in one plane in mutually perpendicular two planes, when member is subjected to shear stress and direct stresses in two mutually perpendicular planes, Mohr's circle for representation of stresses. Derivation of maximum and minimum principal stresses & maximum shear stresses when the member is subjected to different types of stresses simultaneously (i.e. combined stress) Contemporary issues

**Total Lecture** **45 Hours**

### III SEMESTER

### 23ME1306 : Lab Mechanics of Materials

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. Apply the basic concepts of stress, strain and their variations under different types of loading to calculate Stresses.
2. Construct bending moment, shear force diagram for statically determinate beams and determine stress distribution.
3. Compute slope and deflection in statically determinate beam and calculate strain energy under varying load conditions.
4. Evaluate the torsional shear stress in shaft and examine the buckling failure in columns

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                                  |
|----|-------------------------------------------------------|
| 1  | Demonstration of UTM                                  |
| 2  | Tension test on a mild steel rod                      |
| 3  | Compression test on Aluminium specimen                |
| 4  | Hardness test on metals with Rockwell Hardness tester |
| 5  | Flexure test on Wooden beam                           |
| 6  | Spring stiffness test                                 |
| 7  | Torsion test on mild steel rod                        |
| 8  | Impact Test                                           |
| 9  | Demonstration of Fatigue Test                         |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|

## B. Tech in Mechanical Engineering

### III SEMESTER

### 23ME1307 : Kinematics of Machineries

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Apply the basic concepts of stress, strain and their variations under different types of loading to calculate Stresses.
2. Construct bending moment, shear force diagram for statically determinate beams and determine stress distribution.
3. Compute slope and deflection in statically determinate beam and calculate strain energy under varying load conditions.
4. Evaluate the torsional shear stress in shaft and examine the buckling failure in columns

#### Unit I:

**8 Hrs.**

**Simple mechanisms:** Lower and higher pairs, degrees of freedom, various types of mechanisms, their inversions and applications, universal joints, introduction to spatial linkages

#### Unit II:

**7 Hrs.**

**Quantitative kinematics analysis of mechanism:** Quantitative kinematics analysis of mechanism: - Displacement, Velocity and Acceleration analysis of planer mechanism by graphical method as well as analytical method [complex number method/matrix method], Instantaneous center method, Kennedy's theorem

#### Unit III:

**8 Hrs.**

**Cam and follower :** Concepts of cam mechanism, comparison of cam mechanism with linkages. Types of cams and followers and applications. Synthesis of cam for different types of follower motion like constant velocity, parabolic, SHM, cycloid etc. Analysis of follower motion for cams with specified contours like eccentric cam, tangent cam and circular arc cam with concave and convex curvature. Pressure angle in cam, parameters affecting cam performance

#### Unit IV:

**7 Hrs.**

**Gears :** Concept of motion transmission by toothed wheels, comparison with cams and linkages, various tooth profiles, their advantages and limitations, gear tooth terminologies, concept of conjugate action, law of conjugate action, kinematics of involute gear tooth pairs during the contact duration, highlighting locus of the point of contact, arc of contact, numbers of pairs of teeth in contact, path of approach and path of recess, interference, undercutting for involute profile teeth

#### Unit V:

**8 Hrs.**

**Gear Trains :** Kinematics of helical, bevel, spiral, worm gears, rack and pinion gears, kinematics analysis, and torque analysis of simple epicyclical and double epicyclical gear trains

#### Unit VI:

**7 Hrs.**

**Static force analysis:** Static force analysis: Free body diagram, condition of equilibrium. Analysis of all links of given linkage, cam, gear mechanism and their combinations without friction

**Total Lecture 45 Hours**

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|

### III SEMESTER

#### Track 1 - Computer Aided Design

#### MDM1ME101 : Engineering Materials

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

1. Distinguish between ferrous and Non-ferrous materials. Illustrate crystal structures for various materials and Differentiate or Distinguish between ferrous and Non-ferrous materials.
2. Discuss the various applications of steel and cast iron.
3. Discuss the various super alloys.
4. Demonstrate the basics of powder Metallurgy for powder metallurgical components.

#### Unit I:

**8 Hrs.**

**Introduction to Materials:** Introduction to materials, classification of materials. Properties and applications of materials. Crystalline nature of metals, specially microscopic and macroscopic examinations of metals. Alloys and solid solutions, types and their formations.

#### Contemporary Issues related to Topic

#### Unit II:

**8 Hrs.**

**Steel and Cast Iron:** Classification and application of plain carbon steels. Composition and application of Tool Steels & Stainless Steels. Cast Iron – Classification, White cast Iron, Gray Cast Iron, Nodular Cast Iron, Malleable Cast Iron.

#### Contemporary Issues related to Topic

#### Unit III:

**7 Hrs.**

**Super alloys:** Introduction, Classification, Applications and properties of Ni, Fe, Co based super alloys and their thermo-mechanical treatments.

#### Contemporary Issues related to Topic

#### Unit IV:

**7 Hrs.**

**Powder Metallurgy:** Powder manufacture and Conditioning, Production of Sintered Structural Components

#### Contemporary Issues related to Topic

**Total Lecture**

**30 Hours**

#### Textbooks:

1. Dr. V.D. Kodgire, Material Science and Metallurgy, Edition, 1st Jan 2011, Everest Publication House
2. Dr. B K Agrawal, Introduction to Engineering Metallurgy, 21<sup>st</sup> revised edition, 2007, Tata Mc. Graw Hill Education Pvt. Ltd., New Delhi.

# Yeshwantrao Chavan College of Engineering

(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)

**B. Tech SoE and Syllabus 2023**  
(Scheme of Examination w.e.f. 2023-24 onward)  
(Department of Mechanical Engineering)

**SoE No.**  
**23ME-101**

## B. Tech in Mechanical Engineering

### III SEMESTER

#### Track 2- Robotics and Computer Integrated Manufacturing

#### MDM1ME201 : Introduction to Robotics

##### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Describe the components and working principles of robots.
2. Program robots using different programming languages.
3. Demonstrate proficiency in using computer vision techniques for robot applications.
4. Identify and analyze real-world applications of robotics with ethical and societal implications.

##### Unit I:

**8 Hrs.**

**Fundamentals of Robotics:** Introduction to Robotics: Definition, history, and applications, Components of a Robot: Sensors, actuators, controllers, and effectors, Basics of Robot Kinematics, Basics of Robot Dynamics.

**Contemporary Issues related to Topic**

##### Unit II:

**8 Hrs.**

**Robot Programming:** Introduction to Robot Programming: Programming languages used in robotics, Robot Operating System (ROS): Basics of ROS, nodes, topics, messages, Motion Planning: Path planning algorithms, obstacle avoidance, Robot Simulation: Introduction to simulation environments like Gazebo/MATLAB Robotics Toolbox/Robot Analyzer.

**Contemporary Issues related to Topic**

##### Unit III:

**7 Hrs.**

**Robot Perception:** Introduction to Robot Perception: Sensors used in robotics - vision, proximity, touch, etc., Computer Vision: Image processing techniques, object detection, and recognition, Sensor Fusion: Integration of data from multiple sensors for better perception, Localization and Mapping: SLAM (Simultaneous Localization and Mapping) algorithms.

**Contemporary Issues related to Topic**

##### Unit IV:

**7 Hrs.**

**Applications and Future Trends:** Industrial Robotics: Applications in manufacturing, assembly, and automation, Service Robotics: Applications in healthcare, agriculture, and domestic tasks, Research Trends in Robotics: Emerging technologies like soft robotics, swarm robotics, and bio-inspired robotics, Ethical and Societal Implications of Robotics: Discussions on job displacement, privacy concerns, and ethical considerations.

**Contemporary Issues related to Topic**

**Total Lecture**

**30 Hours**

# Yeshwantrao Chavan College of Engineering

(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)

**B. Tech SoE and Syllabus 2023**  
(Scheme of Examination w.e.f. 2023-24 onward)  
(Department of Mechanical Engineering)

**SoE No.**  
**23ME-101**

## **B. Tech in Mechanical Engineering**

### **III /IV SEMESTER**

### **23GE1302/23GE1402 : Integral Transforms**

#### **Course Outcomes:**

Upon successful completion of the course the students will be able to

- 1 Apply the knowledge of Laplace and Fourier transforms to solve the continuous problems.
2. Apply the knowledge of Z transforms to solve the discrete mathematical equations.
3. Determine Fourier series expansion of periodic functions, Fourier Transform.
4. Use appropriate methods to solve partial differential equations.

#### **Unit I:**

**7 Hrs.**

**Laplace Transforms :** Definition and examples of Laplace transforms, properties of Laplace transforms, Examples by using properties of Laplace transforms, Unit step function, periodic function.

#### **Unit II:**

**8 Hrs.**

**Inverse of Laplace Transform:** Definition and examples of Inverse Laplace transforms, Inverse Laplace transform by using properties, Partial fraction method to find Inverse Laplace transforms, convolution theorem, Applications of Laplace transform to solve ordinary differential equations.

#### **Unit III:**

**7 Hrs.**

**Z-Transform:** Some elementary concepts, Definition of Z-Transform, Examples of Z-Transform, Properties (without proof), Inversion by partial fraction decomposition and residue theorem, Applications of Z-transform to solve difference equations with constant co-efficient.

#### **Unit IV:**

**8 Hrs.**

**Fourier Series:** Periodic Functions, standard results, Fourier series expansion, Convergence of Fourier Series, Fourier Series for even and odd function, Change of interval, half range Fourier Series, Examples on half range sine and cosine series.

#### **Unit V:**

**8 Hrs.**

**Fourier Integral:** Fourier Integral of a function formula and examples, Fourier Cosine integral, Fourier Sine integral, Complex Fourier integral, Evaluation of integration using Fourier integral.

## B. Tech in Mechanical Engineering

### IV SEMESTER 23GE1406 : Hindi Language

#### Course Objectives

- विद्यार्थियों में देशभक्तिपरक एवं पारिवारिक मूल्यों का विकास |
- विद्यार्थियों पर्यावरण-संरक्षण के प्रति सजग करना |
- एकांकी, कहानी, निबंध आदि विधाओं के मध्य का अंतर अवगत कराना |
- हिंदी के प्रयोजनमूलक स्वरूप से परिचित कराना |
- विद्यार्थियों को आधुनिक प्रौद्योगिकी (तकनीक) का प्रयोग करने में सक्षम बनाना |.

#### Course Outcomes

- पौराणिक अथवा ऐतिहासिक घटनाओं को तार्किक आधार पर स्वीकार करेंगे | अपने परिवेश के उचित और अनुचित व्यवहारों के प्रति आकलन शक्ति बढ़ेगी |
- एकांकी, कहानी, निबंध आदि विधाओं के मध्य का अंतर बताने में सक्षम होंगे |
- कविता का रसास्वादन करने में समर्थ होंगे |
- 'अनुवाद' के स्वरूप एवं प्रक्रिया से अवगत होंगे |
- 'मार्गिक नक्शे' का दैनिक जीवन में उपयोग करने में सक्षम होंगे |

| Unit:1                      | गद्य विभाग       | 8 Hours |
|-----------------------------|------------------|---------|
| १. भाईसाहब (कहानी)          | - प्रेमचंद       |         |
| २. स्मृति (निबंध)           | - श्रीराम शर्मा  |         |
| ३. गिल्लू (रेखाचित्र)       | - महादेवी वर्मा  |         |
| ४. अभाव (कहानी)             | - विष्णु प्रभाकर |         |
| ५. महाभारत की साँझ (एकांकी) | - भारतभूषण       |         |

|             |                      |          |                 |         |                                      |

### III/IV SEMESTER

**23CV1311/23CV1411**

### Environmental Sustainability, Pollution and Management

#### Course Outcomes :

**Upon successful completion of the course, the students will be able to**

The student will be able to

1. Gain insights into the efforts to safeguard the Earth's environment and resources.
2. Develop a critical understanding of the contemporary environmental issues of concern
3. Have an overview of pollution, climate change and national and global efforts to address adaptation and mitigation to changing environment through environmental management.
4. Learn about the major international treaties and our country's stand on and responses to the major international agreements.

|                                                                                                                                                                                                                                                                                                                               |                                                |                 |

## B. Tech in Mechanical Engineering

### IV SEMESTER

### 23ME1401 : Machining Processes

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

1. Demonstrate and design the tool geometry of SPCT, mechanism of chip formation and principle of orthogonal/oblique cutting.
2. Analyze the cutting tool geometry of MPCT, mechanism of chip formation, mechanism used and working principle with applications.
3. Identify basic parts and operations of machine tools including lathe, shaper, planer.
4. Categorize basic parts and operations of machine tools including boring, milling, and grinding machines.
5. Select a machining operation and corresponding machine tool for a specific application in real-time.

#### Unit I:

**8 Hrs.**

**Mechanics of Machining and Machinability:** Introduction to machining, geometry of SPCT. Mechanism of chip formation, Orthogonal and Oblique cutting, Use of chip breaker in machining, Merchant Circle. (Application of force analysis Analytical treatment expected), thermal aspects of machining, Cutting Fluids, Machinability, Estimation of Tool life, Tool materials.

#### Unit II:

**7 Hrs.**

**Lathe:** Kinematic systems and operations of lathes, attachments for various operations, machine specifications, basis for selection of cutting speed, feed and depth of cut, time estimation for turning operations such as facing, step turning, taper turning, threading, knurling. Capstan and Turret Lathe and special purpose Machines: Construction, Operation and selection of Machining Parameters, Machining Centers, Tool Heads and indexers

#### Unit III:

**8 Hrs.**

**Shaper:** Introduction, type, specification, description of machines, hydraulic drives in shapers, cutting parameters, attachments for shaper, work holding devices, shaper operations. Planer: Introduction, specifications, description, type of planner, Mechanism for planner: Driving mechanism, feeding mechanism, planner cutting tools, cutting parameters Slotter: Introduction, specifications, description, type of drives for slotter, types of slotting

#### Unit IV:

**7 Hrs.**

**Milling:** Kinematic systems and operations of milling machines, attachments for Milling. Cutting parameters, Types of milling cutters, Tool geometry & their specifications. Indexing- simple, compound and differential. Screw threads and Gear Manufacturing Methods. Applications of milling in gear production process.

## B. Tech in Mechanical Engineering

### IV SEMESTER

### 23ME1402 : Lab Machining Processes

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. Demonstrate and design the tool geometry of SPCT, mechanism of chip formation and principle of orthogonal/oblique cutting.
2. Analyze the cutting tool geometry of MPCT, mechanism of chip formation, mechanism used and working principle with applications
3. Identify basic parts and operations of machine tools including lathe, shaper, planer
4. Categorize basic parts and operations of machine tools including boring, milling and grinding machines.
5. Select a machining operation and corresponding machine tool for a specific application in real-time.

Minimum Eight Practical's to be performed from the list as below

| SN  | Experiments based on                                                                                  |
|-----|-------------------------------------------------------------------------------------------------------|
| 1.  | Demonstration of Single point cutting tool their Nomenclature , geometry, materials and applications. |
| 2.  | Demonstration of Multi point cutting tool their Nomenclature , geometry, materials and applications.  |
| 3.  | Demonstration of working of Lathe machine and study of its mechanisms.                                |
| 4.  | Demonstration of working of Shaper machine and study of its mechanism.                                |
| 5.  | Demonstration of working of Milling machine and study of its mechanism.                               |
| 6.  | Demonstration of working of Drilling machine and study of its mechanism..                             |
| 7.  | Practical on Lathe for turning, facing, step turning, taper turning, and l threading.                 |
| 8.  | Practical on Shaper with exposure to auto feed.                                                       |
| 9.  | Practical on Milling machine for slot cutting.                                                        |
| 10. | Practical on Drilling machines for drilling.                                                          |
| 11. | Demonstration of Boring operations.                                                                   |
| 12. | Study of Grinding machines and Super finishing processes.                                             |
| 13. | Introduction to NC, CNC machines.                                                                     |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | June, 2024      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

### IV SEMESTER

### 23ME1403 : Lab Computer Aided Design

#### Course Outcomes

Upon successful completion of the course, the students will be able to;

Apply the knowledge of CAD software for product development in an Industry

1. Apply the knowledge of CAD software for product development in an Industry
2. Create CAD assemblies for real time product.
3. Prepared drafting drawing which required for manufacturing.
4. Simulate the CAD model or CAD assembly.
5. Analyse different CAD models for 3D printing applications.

| SN  | Experiments to be performed                                  |
|-----|--------------------------------------------------------------|
| 1.  | Creation of three dimensional CAD models using CAD software. |
| 2.  | Basic surface modeling using CAD software.                   |
| 3.  | Advanced model creation using surface modeling.              |
| 4.  | Assembly of CAD models using CAD software.                   |
| 5.  | Kinematics of CAD assembly using CAD software.               |
| 6.  | Drafting of CAD models using CAD software.                   |
| 7.  | Drafting of CAD assemblies using CAD software.               |
| 8.  | CAD Model preparation for 3D Printing.                       |
| 9.  | 3D Printing of CAD models using 3D printer.                  |
| 10. | Advanced rendering features for CAD model.                   |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | June, 2024      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### IV SEMESTER

### 23ME1404 : Lab Machine Drawing

#### Course Outcomes

Upon successful completion of the course, the students will be able to;

1. **Understand** and **Apply** the detailed drawing of a given object.
2. **Interpret** and **Prepare** the drawing.
3. **Construct** details and assembly of different mechanical systems.
4. **Create** an assembly drawing into a detailed drawing using modeling software

#### SN Experiments to be performed

#### Drawing Sheets

|   |                                                                                                                                                                                                                                                                                                        |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | <b>Representation</b> of different types of lines, Name Block, Dimensioning, Machining Symbols, Heat Treatment, Allowances, Convention Representation of Engineering Part (CO1)                                                                                                                        |
| 2 | <b>Welding symbol and Riveting:</b> - Shapes of rivet heads. (Diagonal pitch, Margin, Back pitches, etc.) Types of riveting lap and butt joint, zigzag, and chain structure. All types of welding symbols are common representations of welding.(CO2)                                                  |
| 3 | <b>Type of Bolt and Nut:</b> -Hexagonal bolt and nut with washer, SQ headed bolt, Eye bolt, Eye foundation bolt, Bent foundation, and Lewis and Rag foundation bolt. Locking of bolt (All 5 types) T-headed bolt Hook bolt, Flanged nut Cap nut Dome nut Capstan nut Ring nut Wing nut, and Stud.(CO2) |
| 4 | <b>Type of Coupling, Key, and Joint</b><br>Saddle Keys, Sunk Keys, Gib Headed keys, parallel and feather (All Four types) round Keys, Woodruff key, Spline Shafts, Cotter joints, Knuckle joints, Coupling (flange, protective, muff, Oldham, universal) (CO2)                                         |

#### Assembly Drawings

Drawings of assembled views for the part drawings of the following using conventions and easy drawing proportion. Note: First angle projection to be adopted. The student should be able to provide working drawings of actual parts.

|     |                                                                                                       |
|-----|-------------------------------------------------------------------------------------------------------|
| 5   | <b>Steam Engine parts</b> – Stuffing boxes, Crossheads, Eccentrics, pistons, Valves and Pumps.(CO3,4) |
| 6   | <b>Bearings</b> -Bushed journal bearing, Foot-step bearing, and Plummer block.(CO3,4)                 |
| 7   | <b>Machine tool parts</b> –Lathe Tail-stock, Square Tool Post, Machine Vices.(CO3,4)                  |
| 8   | <b>Other machine parts</b> –Screws jacks, Square Tool post, and Petrol engine connecting rod.(CO3,4)  |
| 9   | Simple designs of a steam stop valve, spring-loaded safety valve and feed check valve.(CO3,4)         |
| 10. | <b>Cotter and pin joints and coupling.</b> (CO3,4)                                                    |
| 11. | <b>Production Drawing:</b> Name Plates, Part List and Revisions.(CO4)                                 |

## B. Tech in Mechanical Engineering

### IV SEMESTER

#### Track 1 - Computer Aided Design

#### MDM2ME102 : Basics of Mechanisms

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. **Understand** the various kinematic concepts in different mechanisms.(L3)
2. **Explain** the working Principles of various Mechanism. (L3)
3. **Demonstrate** the various working principles of plants.(L3)
4. **Construct** the various model using CAD software. (L4)

|                                                                                                                                                                                                                   |                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Unit I:</b>                                                                                                                                                                                                    | <b>7 Hrs.</b>                 |
| <b>Basic Concept of Mechanism:</b> link, kinematics pairs, kinematics chain, mechanism, machine, simple & compound chain, Degree of freedom, estimation of degree of freedom, inversion of four-bar-chain. (CO-1) |                               |
| <b>Unit II:</b>                                                                                                                                                                                                   | <b>8 Hrs.</b>                 |
| <b>Working Principles of Mechanism:</b> Seesaw mechanism, Reciprocating Mechanism, Brake Mechanism, Clutch mechanism, Gear mechanism. (CO-2)                                                                      |                               |
| <b>Unit III:</b>                                                                                                                                                                                                  | <b>8 Hrs.</b>                 |
| <b>Mechanisms of:</b> Working of EV vehicles, Thermal power plants, solar power plants, Hydro power plant, wind power and Nuclear power plant. Refrigeration and Air conditioning. (CO-3)                         |                               |
| <b>Unit IV:</b>                                                                                                                                                                                                   | <b>7 Hrs.</b>                 |
| <b>Concept of modelling and analysis:</b> Generation of model using CAD software, Analysis and synthesis of Various Mechanisms. (CO-4)                                                                            |                               |
|                                                                                                                                                                                                                   | <b>Total Lecture 30 Hours</b> |

## B. Tech in Mechanical Engineering

### IV SEMESTER

### Track 2- Robotics and Computer Integrated Manufacturing

### MDM2ME202: Industrial Robotics

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

1. Apply the knowledge of robot motion analysis for product development in an Industry
2. Design robot programs for various manufacturing operations
3. Analyze Robotics based automation and its different roles in industry
4. Analyze the working methodology of robotics and automation, motion and control, machine vision and programming, application of robots in industry.

#### Unit I:

**7 Hrs.**

**Introduction:** Overview of Industrial Robotics: Definition, history, and evolution, Types of Industrial Robots: Manipulators, articulated robots, SCARA robots, etc., Robot Components and Architecture: End effectors, actuators, controllers, and sensors, Applications of Industrial Robots: Manufacturing, assembly, welding, painting, etc.

**Contemporary Issues related to Topic**

#### Unit II:

**8 Hrs.**

**Robot Motion Analysis and Control and Robot End-Effectors:** Introduction to Manipulator Kinematics, Homogeneous Transformations and Robot Kinematics, Manipulator Path Control, Robot Dynamics, Configuration of a Robot Controller, Control System Analysis, Robot Activation and Feedback Components, Types of End Effectors, Mechanical Grippers, Other Types of Grippers, Considerations in Gripper Selection and Design, End Effector Integration: Mounting, calibration, and programming of end effectors.

**Contemporary Issues related to Topic**

#### Unit III:

**8 Hrs.**

**Sensors in Robotics and Machine Vision:** Transducers and Sensors, Sensors in Robotics, Tactile Sensors, Proximity and Range Sensors, Miscellaneous Sensors and Sensor-Based Systems, Uses of Sensors in Robotics, Introduction to Machine Vision, The Sensing and Digitizing Function in Machine Vision, Image Processing and Analysis, Training and Vision System, Applications in Manufacturing industry.

**Contemporary Issues related to Topic**

#### Unit IV:

**7 Hrs.**

**Robot Programming and Languages:** Robot Programming Languages: Teach pendant programming, offline programming, and programming interfaces, Robot Control Systems: Open-loop vs. closed-loop control, PID control, trajectory planning, Robot Safety: Safety standards, risk assessment, and safety features in industrial robots, Simulation and Offline Programming: Introduction to simulation software for robot programming and validation. AI and Robotics.

**Contemporary Issues related to Topic**

**Total Lecture**

**30 Hours**

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1501: Engineering Thermodynamics

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Apply the laws of thermodynamics to various thermodynamic processes/systems for energy interaction.
2. Estimate the entropy interaction in various thermodynamic processes/ systems.
3. Evaluate various thermodynamic parameters with phase change using phase change diagrams, relations, and steam tables.
4. Analyze the performance of various Thermodynamic cycles.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |               |

dryness fraction using various calorimeters

### Unit VI:

**7 Hrs.**

### Thermodynamic Cycles

Vapor Power Cycles: Carnot vapor cycle, Rankine cycle: ideal and the reheat, the analysis of vapor power cycle. Concept of Mixture of Gases and Properties of Mixtures.

Air-standard cycles: air standard assumptions, basic considerations, and the analysis of power cycles: Otto cycle, Diesel engine cycle, and Brayton cycle.

Refrigeration Cycle: Introduction to Vapor-compression Refrigeration Cycle

**Total Lecture**

**45 Hours**

## B. Tech in Mechanical Engineering

### V SEMESTER

## 23ME1502: Measurement Metrology and Quality Control

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Illustrate the basic knowledge of measuring instruments along with various Static & Dynamic characteristics.
2. Describe principles of metrology and Analyze quality of product by metrological instruments.
3. Classify types of fits, Design of limit gauges and tolerance charts.
4. Evaluate quality improvement through statistical tools and acceptance sampling techniques.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |               |

### V SEMESTER

## 23ME1503: Lab - Measurement Metrology and Quality Control

#### Course Outcomes

Upon successful completion of the course the students will be able to:

1. Calibrate and use different length and pressure measuring instruments like Bourdon tube , Lvdt.
2. Demonstrate the necessary skills for estimation and testing of transducers such as RTD.
3. Describe principles of metrology and use metrological instruments for angular measurement.
4. Apply various techniques for measuring Threads, Gears, Surface Finish and profile of a job.

**Minimum Eight Practical's to be performed from the list as below**

| SN  | Experiments based on                                                         |
|-----|------------------------------------------------------------------------------|
| 1.  | Calibration of bourdon tube pressure gauge using dead weight pressure gauge. |
| 2.  | Calibration of LVDT.                                                         |
| 3.  | Measurement of speed by using variable resistance transducer.                |
| 4.  | Measurement of speed by using photo electric transducer.                     |
| 5.  | Measurement of speed by using Stroboscope.                                   |
| 6.  | Find half taper angle by sine bar.                                           |
| 7.  | Study of slip gauges.                                                        |
| 8.  | Find effective dia. With the help of floating carriage machine.              |
| 9.  | Find various parameters of screw thread using Tool maker's microscope.       |
| 10. | Study of flatness of surface using fringes pattern.                          |
| 11. | Measure surface roughness of a given workpiece using stylus probe.           |
| 12. | To study the profile of given work piece using profile projector.            |
| 13. | Temperature measurement by using RTD.                                        |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1504: Fluid Mechanics

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Apply the knowledge of various fluid properties and evaluate hydrostatic forces acting on submerged flat bodies.
2. Apply the knowledge of Kinematics to fluid flow and evaluate Velocity, acceleration and various function of Fluid Flow.
3. Analyze and evaluate real flow problems by applying Bernoulli's equations and momentum equations.
4. Apply the knowledge of fluid flow over bodies to analyze and evaluate the Forces acting on bodies.

|                                                                                                                                                                                                                                                                                                                                                                                                                                          |               |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1505: Lab - Fluid Mechanics

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. Demonstrate and design the tool geometry of SPCT, mechanism of chip formation and principle of orthogonal/oblique cutting.
2. Analyze the cutting tool geometry of MPCT, mechanism of chip formation, mechanism used and working principle with applications
3. Identify basic parts and operations of machine tools including lathe, shaper, planer
4. Categorize basic parts and operations of machine tools including boring, milling and grinding machines.
5. Select a machining operation and corresponding machine tool for a specific application in real-time.

Minimum Eight Practical's to be performed from the list as below

| SN  | Experiments based on                                                                                  |
|-----|-------------------------------------------------------------------------------------------------------|
| 1   | Demonstration of Single point cutting tool their Nomenclature , geometry, materials and applications. |
| 2   | Demonstration of Multi point cutting tool their Nomenclature , geometry, materials and applications.  |
| 3   | Demonstration of working of Lathe machine and study of its mechanisms.                                |
| 4   | Demonstration of working of Shaper machine and study of its mechanism.                                |
| 5   | Demonstration of working of Milling machine and study of its mechanism.                               |
| 6   | Demonstration of working of Drilling machine and study of its mechanism..                             |
| 7   | Practical on Lathe for turning, facing, step turning, taper turning, and 1 threading.                 |
| 8   | Practical on Shaper with exposure to auto feed.                                                       |
| 9   | Practical on Milling machine for slot cutting.                                                        |
| 10  | Practical on Drilling machines for drilling.                                                          |
| 11. | Demonstration of Boring operations.                                                                   |
| 12. | Study of Grinding machines and Super finishing processes.                                             |
| 13. | Introduction to NC, CNC machines.                                                                     |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1506: Operations Research Technique

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. **Solve** real-world optimization problems using linear programming techniques.
2. **Apply** Assignment and Transportation techniques to develop cost-effective solutions .
3. **Evaluate** and optimize system performance using replacement policies, Simulation techniques and queuing models.
4. **Analyze** and manage projects effectively using PERT and CPM to identify critical paths and optimize scheduling for timely project completion.
5. **Assess** inventory techniques to maintain adequate inventory level, improve customer services, minimize cost and enhance overall operational efficiency.

|                                                                                                                                                                                                                                    |                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Unit I:</b>                                                                                                                                                                                                                     | <b>8 Hrs.</b>   |
| <b>Linear Programming:</b> Introduction to Linear Programming Problems: Formulation of LPP, Geometry of LPP and Graphical Solution of LPP, Simplex Method, Big M- Method, and Two Phase Method. Solving Linear Problems in Excel   |                 |
| <b>Unit II:</b>                                                                                                                                                                                                                    | <b>8 Hrs.</b>   |
| <b>Allocation Model:</b> Transportation Problem and Assignment Problem. (Maximization, minimization and degeneracy problem                                                                                                         |                 |
| <b>Unit III:</b>                                                                                                                                                                                                                   | <b>7 Hrs.</b>   |
| <b>Replacement Models:</b> Replacement of Models that deteriorate with time, Concept of equivalence, Interest Rate and Present worth. Replacement of items that fails suddenly considering Individual and Group replacement policy |                 |
| <b>Unit IV:</b>                                                                                                                                                                                                                    | <b>8 Hrs.</b>   |
| <b>Project Management:</b> Network Scheduling by CPM & PERT, Cost considerations in PERT and CPM                                                                                                                                   |                 |
| <b>Unit V:</b>                                                                                                                                                                                                                     | <b>7 Hrs.</b>   |
| <b>Queuing Theory:</b> Queuing Systems, Kendallalls for representing queuing models, Classification of queuing models (No derivations expected), The First Model Monto carlo Simulation.                                           |                 |
| <b>Unit VI:</b>                                                                                                                                                                                                                    | <b>7 Hrs.</b>   |
| <b>Inventory model:</b> Introduction, classification, Types of inventories, EOQ, Deterministic model with shortage and no shortage problems, Models with price breaks                                                              |                 |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1521: PE-I : Finite Element Methods

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Demonstrate the concepts of stress, strain, and material deformation, covering their equations and boundary conditions
2. Apply the fundamental principles of Finite Element Method (FEM).
3. Analyse one-dimensional and two-dimensional engineering problems using FEM,
4. Evaluate the performance and solutions of machine elements using commercial FEM software.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>8 Hrs.</b> |
| <b>Stress and Strain</b><br>Fundamentals of stress & strain, stress & strain components, stress strain relationship, Elastic constants, plane stress, plane strain., differential equation of equilibrium, compatibility equations, boundary conditions, Saint Venant's principle (CO-1)                                                                                                                                                                                                                                                                               |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>7 Hrs.</b> |
| <b>Fundamental concepts of FEM -</b> Historical background, Scope of FEM in Engineering. Applications, Principle of minimum potential energy (PMPE). FEM analysis procedure. Mathematical understanding required for FEM, Matrix algebra & operations. Methods for solution of simultaneous equations like Gauss elimination. Matrix decomposition method. Concept of Discretization of body into elements. Types of elements (2-D & 3-D elements), displacement models, convergence requirements, and shape function. Programming for above matrices (CO-2)           |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>8 Hrs.</b> |
| <b>FEM of 1-D Element</b><br>One dimensional problems by Finite element modeling and analysis: Finite element modeling & analysis using Bar & Beam element -stiffness matrix, assembly, boundary conditions, load vector, temperature effects., Numerical on elements connected in parallel, Numerical on self-weight, numerical on Torque, numerical on Thermal stress (CO-3)                                                                                                                                                                                         |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>7 Hrs.</b> |
| <b>FEM of 2-D Element</b><br>Two dimensional problems using Truss, Constant Strain Triangle & Linear Strain Triangle. FEM modeling and analysis of Truss elements, CST & LST elements, elemental stiffness matrix, assembly, boundary conditions, load vector. Stress calculation. Temperature effect. Axi-symmetric solids subjected to axi-symmetric loading -axi-symmetric formulation using CST ring, element, stiffness matrix, boundary conditions, load vector, calculation of stresses. Programming for simple 2-D problems using CST and LST elements. (CO-3) |               |

### V SEMESTER

### 23ME1522: PE-I : Lab - Finite Element Methods

#### Course Outcomes

Upon successful completion of the course the students will be able to:

- 1 Explain stress, strain, and deformation in materials with key equations and boundary conditions.
6. Apply the fundamental principles of Finite Element Method (FEM).
7. Analyze one-dimensional and two-dimensional engineering problems using FEM,
8. Evaluate the performance and solutions of machine elements using commercial FEM software.

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                                                                    |
|----|-----------------------------------------------------------------------------------------|
| 1  | To study about Finite Element Methods .                                                 |
| 2  | To determine stress and strain in 1-D bar element using ANSYS APDL                      |
| 3  | To determine stress and strain in Composite element using ANSYS APDL                    |
| 4  | To determine stress and strain in Composite element using Twisting Moment by ANSYS APDL |
| 5  | To determine stress and strain in Composite element using Thermal Forces by ANSYS APDL  |
| 6  | To determine stress and strain in Composite element using Thermal Forces by ANSYS APDL  |
| 7  | To determine principle stress and strain in CST element 2D Truss Element by ANSYS APDL  |
| 8  | To determine stress and strain in CST element                                           |
| 9  | Tutorial of 2D truss analysis in Mechanical APDL (Ansys).                               |
| 10 | To determine displacement and coordinates of a point within the CSt element             |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1523: PE-I : Industrial Fluid Power

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. **Apply** fluid power laws and principles to analyze simple fluid power systems, select appropriate fluids, and implement contamination control strategies.
2. **Justify** the selection of components for fluid power systems based on their functional characteristics, performance, and application requirements, ensuring safety and efficiency in industrial environments.
3. **Design** fluid power systems and circuit diagrams using standard symbols to meet specified requirements, emphasizing efficiency and safety in industrial applications.
4. **Implement** safety measures, maintenance practices, and troubleshooting techniques for the efficient operation of fluid power systems, incorporating ethical and professional considerations.

| Unit I:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 8 Hrs. |

## B. Tech in Mechanical Engineering

tandem center valves, method of actuation of valves, manually operated, solenoid operated, pilot operated etc

### Unit IV:

**7 Hrs.**

**Actuators:** Classification, constructional features and working, Linear & Rotary actuators.

**Hydraulic motors:** Types, vane, gear piston, radial piston. Theoretical torque, power & flow rate hydraulic motor performance.

**Hydraulic Cylinders:** Types of cylinder & mountings, cushioning, calculations of force, velocity and power from a cylinder. Design consideration for cylinders.

### Unit V:

**8 Hrs.**

**Design and analysis of Hydraulic Circuit such as:**

- 1) Control of single and Double-acting hydraulic cylinder,
- 2) regenerative circuit,
- 3) pump unloading circuit,
- 4) double pump hydraulic system,
- 5) counterbalance valve application,
- 6) hydraulic cylinder sequencing circuits,
- 7) Cylinder synchronizing circuit using different methods,
- 8) hydraulic circuit for force multiplication.
- 9) speed control of hydraulic cylinder metering in, metering out and bleed off circuits.
- 10) Pilot pressure operated circuits.
- 11) Hydraulic circuit examples with accumulator /intensifier.
- 12) circuit to lift and hold heavy load,
- 13) Pressure control for cylinders,
- 14) Flow divider circuits

**Safety precautions, maintenance and troubleshooting of Hydraulic Circuits.**

### Unit VI:

**7 Hrs.**

**Pneumatics:**

Introduction to pneumatic power sources, Characteristics of compressed air, air compressors used and Components of pneumatic system.

**Air preparation units,** filters, regulators & lubricators, and silencers. compressed air distribution system in a plant.

**Actuators,** linear, single & double acting, rotary actuators, air motors,

**Valves:** Pressure Regulating Valves, Directional Control Valves, Flow Control Valves.

methods of actuation, use of memory valve, Quick exhaust valve, time delay valve, shuttle valve, Signal

**Processing Elements:** Use of Logic gates - OR and AND gates in pneumatic applications. Practical examples involving the use of logic gates. Pneumatic circuits for industrial applications & automation.

**Total Lecture**

**45 Hours**

23ME -101

### V SEMESTER

### 23ME1524: PE-I : Lab-Industrial Fluid Power

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. **Apply** Knowledge of Fluid Power Principles
2. **Design** and Implementation of Fluid Power Circuits
3. **Perform** System Maintenance and Troubleshooting
4. **Demonstrate** Discipline, Safety, and Collaborative Communication Skills

#### Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                                                                                                                     |
|----|------------------------------------------------------------------------------------------------------------------------------------------|
|    | <b>Experiments on Hydraulics Circuits:</b>                                                                                               |
| 1  | Extend-Retract and Stop system of a linear actuator.                                                                                     |
| 2  | Regenerative circuit.                                                                                                                    |
| 3  | Speed Control circuits: meter-in, meter-out and bleed off.                                                                               |
| 4  | Sequencing circuit                                                                                                                       |
| 5  | Use of solenoid operated DCV.                                                                                                            |
| 6  | Traverse and Feed circuit.                                                                                                               |
|    | <b>Experiments on Pneumatic Circuits:</b>                                                                                                |
| 7  | Study of Compressor, FRL unit and 5/3 DCV.                                                                                               |
| 8  | Reciprocating motion of a single and a double acting actuator.                                                                           |
| 9  | Speed control circuits.                                                                                                                  |
| 10 | Automatic to & fro motion of a pneumatic linear actuator.                                                                                |
| 11 | Sequencing circuit.                                                                                                                      |
| 12 | Logical circuits.                                                                                                                        |
|    | <b>Other practical work:</b>                                                                                                             |
| 13 | Design <b>report</b> of a hydraulic or pneumatic system using <b>manufacturer's catalogue</b> .                                          |
| 14 | Study of accumulators and intensifiers.                                                                                                  |
| 15 | <b>Industrial visit</b> to study automation by means of hydraulic and pneumatics such as LPG bottling plant etc                          |
| 16 | Study of <b>compressed air generation and distribution</b> systems.                                                                      |
| 17 | Study of <b>simple hydraulic systems</b> used in practice such as copy turning attachment, hydraulic clamps, jack, dumper, forklift etc. |
| 18 | Other circuits possible on the trainer kit, relevant to the syllabus                                                                     |
| 19 | Demonstration of the Hydraulic or Pneumatic System                                                                                       |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1525: Electric and Hybrid Vehicle

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Student will be able to explain the working of electric vehicles and recent trends. (PO-1,PO-10,PO-12) (PSO-1, PSO-2)
2. Student will be able to analyze different power converter topology used for electric vehicle application. (PO-1,PO-10,PO-12) (PSO-1, PSO-2)
3. Student will be able to develop the electric propulsion unit and its control for application of electric vehicles. (PO-1,PO-3,PO-6,PO-10,PO-12) (PSO-1, PSO-2)
4. Student will be able to Design converters for battery charging and explain transformer less topology. (PO-1,PO-3,PO-6,PO-10,PO-12) (PSO-1, PSO-2)

|                                                                                                                                                                                                                                                                                                                                                                                                                              |                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                               | <b>8 Hrs.</b>                 |
| Configuration of Electric Vehicles, Performance of Electric Vehicles, Traction motor characteristics, Tractive effort and Transmission requirement, Vehicle performance, Tractive effort in normal driving, Energy consumption Concept of Hybrid Electric Drive Trains, Architecture of Hybrid Electric Drive Trains, Series Hybrid Electric Drive Trains, Parallel hybrid electric drive trains.                            |                               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                              | <b>7 Hrs.</b>                 |
| Energy storage requirements, Battery parameters, Types of Batteries, Modelling of Battery, Fuel Cell basic principle and operation, Types of Fuel Cells, PEMFC and its operation, Modelling of PEMFC, Hydrogen fuel cell- Connecting cell in series-water management in the PEM fuel cell- Thermal Management of the PEM fuel cell, Super capacitors.                                                                        |                               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                             | <b>8 Hrs.</b>                 |
| EV consideration, DC motor drives and speed control, Induction motor drives, Permanent Magnet Motor Drives, Switch Reluctance Motor Drive for Electric Vehicles, Configuration and control of Drives                                                                                                                                                                                                                         |                               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                              | <b>7 Hrs.</b>                 |

### V SEMESTER

### 23ME1526: PE-I : Lab - Electric and Hybrid Vehicle

#### Course Outcomes

Upon successful completion of the course the students will be able to:

1. Student will be able to explain the working of electric vehicles and recent trends. (PO-1,PO-10,PO-12) (PSO-1, PSO-2)
2. Student will be able to analyze different power converter topology used for electric vehicle application. (PO-1,PO-10,PO-12) (PSO-1, PSO-2)
3. Student will be able to develop the electric propulsion unit and its control for application of electric vehicles. (PO-1,PO-3,PO-6,PO-10,PO-12) (PSO-1, PSO-2)
4. Student will be able to Design converters for battery charging and explain transformer less topology. (PO-1,PO-3,PO-6,PO-10,PO-12) (PSO-1, PSO-2)

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                                                                            |
|----|-------------------------------------------------------------------------------------------------|
| 1  | Study of different systems of Hybrid and electric vehicles.                                     |
| 2  | Study of Speed control of DC motor using IGBT.                                                  |
| 3  | Demonstration of Wiring layout of Electric Vehicles.                                            |
| 4  | Study of Control circuit of an Induction Motor                                                  |
| 5  | Demonstration of Controllers and Actuators in Electric Vehicles.                                |
| 6  | Demonstration of various components of battery and working of its charging system.              |
| 7  | Demonstration to understand working principle of Electric horn, Brake light and side indicator. |
| 8  | Study of various types of Braking systems.                                                      |
| 9  | Case study of any Electric/ Hybrid car manufactured/sale in India.                              |
| 10 | Visit to servicing station for electric vehicle maintenance, repairs and report.                |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

### V SEMESTER

### 23ME1527: PE-I : Advance Welding Techniques

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Justify the concept of advance welding processes applicable to industry..
2. Examine the parameters needed for welding to increase the durability of product.
3. Differentiate the concept of soldering and brazing and cutting process through welding.
4. Evaluate welding defect through welding testing method.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                 |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1528: PE-I : Lab - Advance Welding Techniques

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. Demonstrate the concept of advance welding processes applicable to industry..
2. Examine the parameters needed for welding to increase the durability of product.
3. Differentiate the concept of soldering and brazing and cutting process through welding.
4. Analyze the welding defect through welding testing method.

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                              |
|----|---------------------------------------------------|
| 1  | Study of welding Technology.                      |
| 2  | Study of Welding Electrodes in Welding Processes. |
| 3  | Study of Effect of welding Parameters.            |
| 4  | Demonstration of Oxy-fuel Welding.                |
| 5  | Demonstration of Shielded Metal Arc Welding.      |
| 6  | Demonstration of Gas Metal Arc Welding.           |
| 7  | Demonstration of Gas Tungsten Arc Welding.        |
| 8  | Study of Cold Metal Transfer (CMT) Arc Welding.   |
| 9  | Study of Welding Defects.                         |
| 10 | Study of Weldment Testing.                        |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1533: PE-I Computer Aided Manufacturing

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Apply the knowledge of computer aided manufacturing for product development in an Industry
2. Conduct computer aided manufacturing using 3D CAD models using CNC machines
3. Design parts using CAD and CNC programs using CAM packages for various product manufacturing
4. Analyse different CNC technologies for application in different manufacturing industry
5. Analyse the working methodology of 3D CAD modelling, CNC programming and control and applications in industry

|                                                                                                                                                                                                                                                                                                                                                                                                |               |

## B. Tech in Mechanical Engineering

concepts, Benefits of group technology, Approaches to Process Planning, Different CAPP system, application and benefits.

### Contemporary Issues related to Topic

**Unit VI:** **7 Hrs.**

**Integrated Production Management System:** Introduction, PPC fundamentals, Problems with PPC, MRP-I, MRP-II. Just in Time philosophy: JIT & GT applied to FMS, concepts of Expert System in Manufacturing and Management Information System.

Contemporary Issues related to Topic

**Total Lecture** **45 Hours**

### Textbooks:

1. Computer Aided Manufacturing by Tien Chien Chang, Pearson Education
2. Robotics Technology and Flexible Automation, by S R Deb, S Deb, McGraw Hill Education Private Limited.
3. Automation in Production system
4. Flexible Manufacturing Cells and System -William. W. Luggen Hall, England Cliffs, Newjersy
5. P. Radhakrishnan, " Computer Numerical Control ", New Central Book Agency, 1992.
6. Computer Aided Manufacturing- Rao, Tewari, Kundra, McGraw Hill, 1993

### Reference Books:

1. CNC Technology and Programming 2003 Krar, S., and Gill Industrial Press Inc
2. An Introduction to CNC Machining 1991 Gibbs, D. Industrial Press
3. Computer Numerical Control Concepts and Programming 1991 Seames, W.S. Thomson Learning EMEA, Limited
4. Computer Numerical Control for Machining 1993 Lynch, M McGraw-Hill
5. Computer Control of Manufacturing Systems 2005 Koren Y Tata McGraw-Hill Education

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1534: Lab - : PE-I Computer Aided Manufacturing

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. Apply the knowledge of additive and subtractive manufacturing for product development in an Industry
2. Conduct additive manufacturing using 3D printing methods and subtractive manufacturing using CNC machines
3. Design 3D printing methods and CNC programs for various product manufacturing
4. Analyse different 3D printing and CNC technologies for application in different industry

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                                                                                                                  |
|----|---------------------------------------------------------------------------------------------------------------------------------------|
| 1  | NX CAM basic NX CAM basic tooling overview including work holding and tool holding devices, MCS, WCS, workpiece assignment procedure. |
| 2  | Program creation and simulation for face milling operation.                                                                           |
| 3  | Program creation and simulation for mill planar floor and wall, cavity mill, z-level profile milling operation.                       |
| 4  | Program creation and simulation for hole making and planar and contour text engraving operation.                                      |
| 5  | Program creation and simulation for boss milling operation.                                                                           |
| 6  | Program creation and simulation for different turning operation including OD, ID turning, grooving, threading, etc.                   |
| 7  | Creation and simulation of program using Feature-based machining.                                                                     |
| 8  | Postprocessing the operations using different postprocessors for creating a CNC program.                                              |
| 9  | Creation of shop documentation for the manufacturing operation.                                                                       |
| 10 | Virtual multi-axis CNC machine simulation for the milling and turning operation.                                                      |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1531: PE – I : Mechatronics

#### Course Outcomes :

Upon successful completion of the course the students will be able to :

1. Explain the basic elements of mechatronics system.
2. Analyze the functioning of sensors, transducers and actuators.
3. Analyze and evaluate the electronic elements such as digital circuits, AD convertors, etc.
4. Explain the basics of PLC

|                                                                                                                                                                                                                                                                                                                                                                                                                                                   |               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>8 Hrs.</b> |
| Computer Integration of Electro-Mechanical System, Virtual Instrumentation and Computer Monitoring and control Basics solid state components .Measurement system, Control system, Microprocessor based controllers & its applications, other applications with mechatronic approach, Building blocks of mechatronic system. Comparison between Traditional and Mechatronics approach<br><b>Contemporary Issues related to Topic</b>               |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>7 Hrs.</b> |
| Classification, Performance terminologies, Displacement, Position & proximity sensors, Photo detectors, Optical encoders, Pneumatic sensor, Hall effect sensor, Velocity & motion sensors: Incremental encoder, Tachogenerator, Piezo electric sensors, Tactile sensors, Flow & temperature sensors: Ultrasonic sensors, Light sensors, Selection of sensors, Interference & noise in measurement.<br><b>Contemporary Issues related to Topic</b> |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>8 Hrs.</b> |
| Pneumatic & hydraulic actuation systems: System configuration, Control System & its elements, Linear actuators, Rotary actuators. Mechanical actuation: System types & its configuration, fixed ratio type, Invariant motion profile type, variator etc. Electrical actuation system types & configurations, Mechanical switches, Solid state switches, Solenoids.<br><b>Contemporary Issues related to Topic</b>                                 |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>7 Hrs.</b> |
| Boolean algebra combinational circuits. (Adders, Subtractors, encoders, decoders, multiplexers, de – multiplexers, memory units: RAM, ROM, EPROM etc.), Sequential circuits (Latches, Flip-flops, Counters, Registers).<br><b>Contemporary Issues related to Topic</b>                                                                                                                                                                            |               |

**SoE No.  
23ME -101**

### V SEMESTER

### 23ME1532: Lab: PE – I: Mechatronics

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. Explain the basic elements of mechatronics system.
2. Analyze the functioning of sensors, transducers and actuators.
3. Analyze and evaluate the electronic elements such as digital circuits, AD convertors, etc.
4. Explain the basics of PLC

Minimum Eight Practical's to be performed from the list as below

| SN  | Experiments based on                                                                         |
|-----|----------------------------------------------------------------------------------------------|
| 1   | Introduction and development of a mechatronic system through a case study.                   |
| 2   | Performance and Demonstration on of operational amplifier.                                   |
| 3   | Performance and Demonstration on of rotary encoders.                                         |
| 4   | Speed measurement using magnetic pick up coil sensor on DAQ system.                          |
| 5   | Programmable Logic Controller (PLC), PLC Trainer system S7-1200                              |
| 6   | Development of ladder programming using PLC for road junction traffic light control system.  |
| 7   | Development of ladder programming using PLC for water level control system                   |
| 8   | Development of ladder programming using PLC for washing machine.                             |
| 9   | Development of ladder programming using PLC for soft drink winding machine                   |
| 10  | Development of ladder programming using PLC for the lift simulation                          |
| 11. | Development of ladder programming using PLC for the pedestrian traffic light control system. |
| 12. | Development of ladder programming using PLC for any other suitable applications.             |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1533: PE-I Computer Aided Manufacturing

#### Course Outcomes :

**Upon successful completion of the course the students will be able to :**

1. Apply the knowledge of computer aided manufacturing for product development in an Industry
2. Conduct computer aided manufacturing using 3D CAD models using CNC machines
3. Design parts using CAD and CNC programs using CAM packages for various product manufacturing
4. Analyse different CNC technologies for application in different manufacturing industry
5. Analyse the working methodology of 3D CAD modelling, CNC programming and control and applications in industry

|                                                                                                                                                                                                                                                                                                                                                                                                |               |

## B. Tech in Mechanical Engineering

### V SEMESTER

#### 23ME1534: Lab - 23ME1533: PE-I Computer Aided Manufacturing

##### Course Outcomes

Upon successful completion of the course the students will be able to

1. Apply the knowledge of additive and subtractive manufacturing for product development in an Industry
2. Conduct additive manufacturing using 3D printing methods and subtractive manufacturing using CNC machines
3. Design 3D printing methods and CNC programs for various product manufacturing
4. Analyse different 3D printing and CNC technologies for application in different industry

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                                                                                                                  |
|----|---------------------------------------------------------------------------------------------------------------------------------------|
| 1  | NX CAM basic NX CAM basic tooling overview including work holding and tool holding devices, MCS, WCS, workpiece assignment procedure. |
| 2  | Program creation and simulation for face milling operation.                                                                           |
| 3  | Program creation and simulation for mill planar floor and wall, cavity mill, z-level profile milling operation.                       |
| 4  | Program creation and simulation for hole making and planar and contour text engraving operation.                                      |
| 5  | Program creation and simulation for boss milling operation.                                                                           |
| 6  | Program creation and simulation for different turning operation including OD, ID turning, grooving, threading, etc.                   |
| 7  | Creation and simulation of program using Feature-based machining.                                                                     |
| 8  | Postprocessing the operations using different postprocessors for creating a CNC program.                                              |
| 9  | Creation of shop documentation for the manufacturing operation.                                                                       |
| 10 | Virtual multi-axis CNC machine simulation for the milling and turning operation.                                                      |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### V SEMESTER

### 23ME1535: Two Wheeler Technology

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Student will be able to Classify & Explain various systems of Engine, its function including fuel supply, cooling and lubrication system in a two wheeler. (PO-1,PO-10,PO-12) (PSO-1, PSO-2)
2. Student will be able to Analyze and explain various power transmission systems from clutch to wheel in a two wheeler. (PO-1,PO-10,PO-12) (PSO-1, PSO-2)
3. Student will be able to Student will be able to Classify and Compare control systems like steering, suspension and brakes in a two wheeler. (PO-1,PO-3,PO-6,PO-10,PO-12) (PSO-1, PSO-2)
4. Student will be able to explain and Recommend the necessary electrical and luxurious systems and safety system in a two wheeler. (PO-1,PO-3,PO-6,PO-10,PO-12) (PSO-1, PSO-2)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |               |

**23ME -101**

## B. Tech in Mechanical Engineering

Crankcase Ventilation.

### Unit IV:

**7 Hrs.**

**Steering and Suspension System, Brakes, Wheels and Tyres:** Handle Bar arrangement, Steering fork, Purpose of providing Caster angle. Use of Dampers/ Double acting type of shock absorbers. Use of Variable Rate coil spring, Coil in coil spring arrangement. Advantages of Mono-shock suspension system. Advantage of Gas filled shock absorber for rear end suspension.

Drum (Mechanical Expanding Shoe type) and disc Brakes (Fixed Caliper and Floating Caliper types.), Mechanical and Hydraulic brakes. Lever operated and pedal operated brakes. Application and criteria for selection of wheels and tyres, their specification for motorcycles, scooters, sports bike.

### Unit V:

**8 Hrs.**

**Electrical systems-I:** Ignition System: Working of Condenser Discharge Ignition (CDI) system. Microprocessor controlled Ignition system block diagram and working. Benefits of Twin Spark Ignition system

Starting system and Charging System: Kick Start and Button Start arrangements. Components of starting system and their functions: D C motor, Battery, Battery Rating for use in Button start vehicles. Schematic circuit and working of charging system. Schematic diagram showing AC and DC circuits.

### Unit VI:

**7 Hrs.**

**Electrical systems-II:** Lighting System and accessories- Specifications and Application of Head Lamp, Tail and number plate Lamp, Purpose of using LED lights in tail lamp, Turn Signal Lamp, Side Stand Indicator Lamp, High Beam Indicator Lamp, Neutral Indicator Lamp, Speedometer Lamp, Horn, Mobile Charger point, Head lamp and tail lamp Reflectors used in two wheelers.

Dash units: Use of Speedometer (Analog and digital), Trip meter. Use of Engine Speed indicator/ Tachometer., Aerodynamic Aspects.

**Total Lecture**

**45 Hours**

## B. Tech in Mechanical Engineering

### 23ME1536: Lab - Two Wheeler Technology

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. Student will be able to Classify & Explain various systems of Engine, its function including fuel supply, cooling and lubrication system in a two wheeler. (PO-1,PO-10,PO-12) (PSO-1, PSO-2)
2. Student will be able to Analyze and explain various power transmission systems from clutch to wheel in a two wheeler. (PO-1,PO-10,PO-12) (PSO-1, PSO-2)
3. Student will be able to Student will be able to Classify and Compare control systems like steering, suspension and brakes in a two wheeler. (PO-1,PO-3,PO-6,PO-10,PO-12) (PSO-1, PSO-2)
4. Student will be able to explain and Recommend the necessary electrical and luxurious systems and safety system in a two wheeler. (PO-1,PO-3,PO-6,PO-10,PO-12) (PSO-1, PSO-2)

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                                                                                                                                                                                                                                                                                                                                                                                          |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1  | Observe and sketch the layout of a two wheeler transmission system.                                                                                                                                                                                                                                                                                                                                           |
| 2  | Check the following electrical / electronic components, parameters of a two wheeler. CDI system components, Charging System components, Voltage at battery, specific gravity and high discharge test Use service/ operator's manual for specifications.                                                                                                                                                       |
| 3  | 3Adjust idle speed of a two wheeler engine using the specified procedure. Check the Idling Emission using Exhaust Gas Analyzer and do necessary carburetor adjustments for better performance.                                                                                                                                                                                                                |
| 4  | Check the Ignition Timing of a two-wheeler and compare it with the Workshop/ Operators Manual Specification. Remove, observe, clean the Spark plug and adjust the gap and refit.                                                                                                                                                                                                                              |
| 5  | 5Remove and refit rear wheel of a two wheeler - check the conditions of brake shoes, brake drum, bearings etc. Perform brake adjustment. Replace brake cables, brake shoes/ pads.                                                                                                                                                                                                                             |
| 6  | Visit a Two wheeler Dealer Showroom/ Company showroom to obtain Chassis specification of a Scooter/ Motorcycle or scooterate. Share and Compare the data collected for two vehicles in the same category of vehicles (on the basis of Ground clearance, wheel base, engine power, spare wheel, claimed fuel efficiency, load carrying capacity). Prepare a report to identify the better one in the category. |
| 7  | Dismantle and assemble a motorcycle clutch and perform clutch adjustments. Replace clutch cable, if required.                                                                                                                                                                                                                                                                                                 |
| 8  | Carry out lubrication and greasing of a vehicle. Engine, brake linkage, clutch linkage, fork, axle, chain and levers.                                                                                                                                                                                                                                                                                         |
| 9  | Demonstration of various components of battery and working of its charging system.                                                                                                                                                                                                                                                                                                                            |
| 10 | Demonstration to understand working principle of Electric horn, Brake light and side indicator.                                                                                                                                                                                                                                                                                                               |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1601: Heat Transfer

#### Course Outcomes :

**Upon successful completion of the course the students will be able to:**

1. Analyze the problems of unidirectional steady state heat conduction systems.
2. Apply the empirical correlations in convection processes to estimate the heat transfer coefficient.
3. Design the heat exchangers with LMTD &  $\epsilon$ -NTU methods.
4. Evaluate the net thermal radiation exchange between surfaces and estimate radiation view factors using tables, graphs and the view factor relationships.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |               |

## B. Tech in Mechanical Engineering

Classification of heat exchangers, overall heat transfer coefficient, fouling factor, temperature distribution

Heat Exchanger Analysis for parallel & Counter flow heat exchangers using LMTD Approach and Effectiveness -NTU approach.

### Unit VI:

**8 Hrs.**

### Radiation

**Basic Radiation Concepts:** Fundamentals, Basic ideas, spectrum, basic definitions, radiative properties of opaque surfaces, Spectral and directional variations, emissive power, radiosity, intensity of radiation and solid angle, Band Emission. Black Body Radiation Laws: Planck's law, Stefan Boltzmann law, Wien's Displacement law, Kirchhoff's law, Lambert cosine law,

**Radiation Energy Exchange:** Concept of black and gray bodies, Radiation exchange between black surfaces, Radiation exchange between gray surfaces Shape Factor Concepts– Definition, relations, and its properties. Radiation network for radiative exchange. Radiation between parallel plates, concentric Cylinders, and concentric spheres & simple enclosures.

**Total Lecture**

**45 Hours**

### Textbooks:

1. Introduction to heat transfer, Incropera & Dewitt J. Wiley, John Wiley & Sons, 7th Edition (2022).
2. Elements of heat transfer, M. N. Ozisik, McGraw-Hill, Edition (2023).

### Reference Books:

1. Heat Transfer, Holman, J. P., McGraw Hill.
2. Principles of Heat Transfer, Frank Kreith, Harper and Row Publishers, New York.
3. Heat transfer, S. P. Sukhatme, Universities press, (India), 7th Edition (2020).
4. Heat Transfer, Yunus A Cengel, McGraw-Hill, Edition (2022).
5. Fundamentals of Heat & Mass transfer, M. Thirumaleshwar, Pearson, 4th Edition (2020).
6. Heat and Mass Transfer Data Book, C. P. Kothandaraman and Subramanian, New Age International Publications, 8th Edition, 2020.
7. Fundamentals of Heat and Mass Transfer, C.P. Kothandaraman, New Age Publishers, 4th Edition.
8. Heat Transfer, Holman, J. P., McGraw Hill.

### **VI SEMESTER**

### **23ME1602: Lab – Heat Transfer**

#### **Course Outcomes**

**Upon successful completion of the course the students will be able to:**

1. **Analyze** heat transfer rates and temperature distributions across conduction, convection, and radiation modes.
2. **Determine** thermal parameters such as heat transfer coefficients, conductivity, conductance, emissivity, and the Stefan-Boltzmann constant using experimental methods.
3. **Evaluate** performance characteristics of heat transfer equipment based on efficiency, effectiveness, and NTU.
4. **Demonstrate** effective communication, ethical behavior, safety practices, and teamwork in conducting and reporting heat transfer experiments

#### **Minimum Eight Practical's to be performed from the list as below**

| SN  | Experiments based on                                                                                  |
|-----|-------------------------------------------------------------------------------------------------------|
| 1.  | Determination of thermal conductivity of metal bar.                                                   |
| 2.  | Determination of thermal conductivity of insulating material in the powder form Lagged Pipe).         |
| 3.  | Determination of thermal conductance of a composite wall.                                             |
| 4.  | Heat Transfer through FINs.                                                                           |
| 5.  | Experiments based on CONVECTION:                                                                      |
| 6.  | Determination of forced convection heat transfer coefficient for fluid flow through a closed conduit. |
| 7.  | Determination of natural convection heat transfer coefficient for a vertical surface.                 |
| 8.  | Experiments based on HEAT EXCHANGER:                                                                  |
| 9.  | Determination of effectiveness and overall heat transfer coefficient for parallel flow                |
| 10. | and counter flow concentric tube heat exchangers.                                                     |
| 11. | Experiments based on RADIATION:                                                                       |
| 12. | Determination of emissivity of non-black surfaces.                                                    |
| 13. | Determination of Stefan-Boltzmann constant.                                                           |

|             |                      |          |                 |         |                                      |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1603: Dynamics of Machines

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Differentiate static and dynamic forces on different machines and mechanisms.
2. Analyze the unbalanced in rotating & reciprocating machines and corrections required to balance the same.
3. Identify the vibrations in different machines.
4. Evaluate and justify vibrations

|                                                                                                                                                                                                                                                                                                                                             |                               |

### VI SEMESTER

### 23ME1604: Dynamics of Machines

#### Course Outcomes

Upon successful completion of the course the students will be able to:

1. Differentiate static and dynamic forces on different machines and mechanisms.
2. Analyze the unbalanced in rotating & reciprocating machines and corrections required to balance the same.
3. Identify the vibrations in different machines.
4. Evaluate and justify vibrations

**Minimum Eight Practical's to be performed from the list as below**

| SN  | Experiments based on                                                              |
|-----|-----------------------------------------------------------------------------------|
| 1   | To determine Gyroscopic couple on motorized Gyroscope                             |
| 2   | To determine Range of Speed, Sleeve Lift, Torque and Power on Watt Governor,.     |
| 3   | To determine Range of Speed, Sleeve Lift, Torque and Power on Proell Governor,.   |
| 4   | To determine Balancing of rotating mass, statically and dynamically               |
| 5   | To determine Balancing of reciprocating masses of a Four Cylinder On-Line Engine. |
| 6   | To determine Natural frequency of longitudinal vibration                          |
| 7   | To determine Natural frequency of transverse vibration of beam..                  |
| 8   | To determine Natural frequency of simply supported beam using dunker lays method. |
| 9   | To determine Whirling speed of shaft.                                             |
| 10  | To determine Natural frequency of torsional vibration of Single rotor system      |
| 11. | To determine Natural frequency of torsional vibration of Two rotor system         |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1605: Design of Machine Element

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Analyse the design process, its phases, and the fundamental theories of failure, fatigue, and material selection for mechanical components.
2. Design various types of joints, including welded, bolted, and riveted joints, considering mechanical loading conditions.
3. Design power transmission systems, including power screws, helical springs, leaf springs, brakes, and clutches, for practical applications.
4. Analyse and design pressure vessels and transmission shafts based on strength, rigidity, and industry standards.

|                                                                                                                                                                                                                                                                                                                                                                                              |                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                               | <b>8 Hrs.</b>                 |
| Definition of design, types of design, design process, need, defining the problem, feasibility, design alternatives, final design selection, preliminary and final plant drawings. Theories of failure, Design for Fatigue & manufacturing considerations in design, basis of good design, failure of machine parts, Mechanical properties, Design considerations and selection of materials |                               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b>                 |
| Design of Joints: Welded joint, design of single transverse, double transverse, parallel fillet, combination fillet butt joint, eccentrically loaded welded joints Design of riveted joints                                                                                                                                                                                                  |                               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                             | <b>7 Hrs.</b>                 |
| <b>Power screw and Leaf spring</b> : Design of power screw, Design of Helical and Leaf Springs.                                                                                                                                                                                                                                                                                              |                               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b>                 |
| <b>Brakes and clutches:</b> Kinematics of Friction Drives such as Brakes, Clutches Design of Friction Clutch, Single Plate, Multiple Plate, Cone, Centrifugal Clutch, Design of Brake, Shoe Brake, Band Brake,, Internal Expanding brake..                                                                                                                                                   |                               |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                               | <b>7 Hrs</b>                  |
| <b>Pressure Vessel:</b> Classification of Thick and Thin Cylindrical Pressure Vessel, Stresses in Thin and Thick Cylindrical Pressure Vessels when it is subjected to internal pressure, Expression for Circumferential and Longitudinal stresses, Design of pressure vessel, Heads and Cover Plate                                                                                          |                               |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs</b>                  |
| <b>Design of Shafts:</b> Design of transmission Shafts on the Basis of Strength and rigidity, ASME Code for shaft Design, Design of Stepped shaft Axle splined Shaft, Keys                                                                                                                                                                                                                   |                               |
|                                                                                                                                                                                                                                                                                                                                                                                              | <b>Total Lecture 45 Hours</b> |

|             |                      |          |                 |         |                                      |

### VI SEMESTER

### 23ME1606: Lab: Computer Aided Engineering

#### Course Outcomes

Upon successful completion of the course the students will be able to

- 1: Understand** the principles of FEA and utilize CAE tools to analyze structural, thermal, and dynamic problems in engineering applications.
- 2: Develop** models using CFD techniques to simulate and optimize aerodynamics, heat transfer, and fluid behavior in engineering systems.
- 3: Utilize** computer-aided design (CAD) and simulation tools to enhance engineering product development, focusing on stress analysis, deformation, and failure modes.
- 4: Apply** CAE tools to study coupled interactions between structural, thermal, electromagnetic, and fluid dynamics, enhancing efficiency in real-world engineering challenges.

Minimum Eight Practical's to be performed from the list as below

| SN  | Experiments based on                                                                                                                                                                                   |
|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1   | Analysis of Plane Truss & Spatial Truss with various cross sections and materials to determine member forces, member strains & stresses, joint deflections under static, thermal and combined loading. |
| 2   | 2D & 3D beam analysis with different sections, different materials for different loads (forces and moments) with different end supports.                                                               |
| 3   | Static analysis of plate with a hole to determine the deformations, the Stresses to study the failure behavior.                                                                                        |
| 4   | Plane stress, plane strain and axisymmetric loading on the in-plane members with in plane loading to study the stresses and strains.                                                                   |
| 5   | Static analysis of connecting rod with tetrahedron and brick elements.                                                                                                                                 |
| 6   | Static Analysis of flat and curved shell due to internal pressure and moments to estimate the strains, stresses and reactions forces and moments with different boundary conditions.                   |
| 7   | Buckling analysis of plates, shells and beams to estimate Buckling Failure and modes.                                                                                                                  |
| 8   | Modal analysis of beams, plates and shells for natural frequencies and mode shapes.                                                                                                                    |
| 9   | Harmonic analysis of a Shaft subjected to periodic force and transient analysis of plate subjected to stepped and ramped loading with varying time                                                     |
| 10  | Steady state heat transfer Analysis Cross section of chimney and transient heat transfer analysis of solidification of castings.                                                                       |
| 11. | Nonlinear analysis of cantilever beam with non-linear materials at tip moment and post buckling analysis of shells for critical loads.                                                                 |
| 12. | CFD analysis of aerofoil design.                                                                                                                                                                       |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1607: Project Phase-I

#### Project (Phase-1)

Projects help to bridge the gap between theory-based learning and skills-based learning. The Projects fulfill the purpose of synthesizing the knowledge acquired during the years and demonstrating the student's aptitude by applying the knowledge.

#### Course Objectives of Major Project (Phase-1):

1. To provide an opportunity of designing and building complete system or subsystems based on areas where the student likes to acquire specialized skills.
2. To obtain hands-on experience in converting a small novel idea / technique into a working model / prototype involving multi-disciplinary skills.
3. To embed the skill in a group of students to work independently on a topic/ problem/ experimentation selected by them and encourage them to think independently on their own to bring out the conclusion under the given circumstances of the curriculum period in the budget provided with the guidance of the faculty.
4. To encourage creative thinking processes to help them to get confidence by planning and carrying out the work plan of the project and to successfully complete the same, through observations, discussions and decision-making process.

The students in a group of not more than FOUR will work under the guidance of the faculty member on the project work undertaken by them. The completion of work, the submission of the report and assessment should be done at the end of the Semester.

#### The project work may consist of,

1. A comprehensive and up-to-date survey of literature related to study of a phenomenon or product.
2. Design of any equipment and / or its fabrication and testing.
3. Critical Analysis of any design or process for optimizing the same.
4. Experimental verification of principles used in applications related to Production Engineering.
5. Product design and development
6. Software development for applications.
7. Industry needs based basic survey or Testing or Analysis etc.
8. A combination of the above.

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1608: Design Thinking and Research Methodology

#### Course Outcomes :

Upon successful completion of the course the students will be able to

5. Demonstrate a proficient and deep understanding of the core concepts of 'design', 'designing', 'designer', 'designer lines' and 'design thinking'.
6. Critically reflect upon and evaluate their progress in understanding the importance of key design issues and values, such as accessibility, diversity, viability, and sustainability.
7. Critically evaluate designs-in-use and proposed design ideas, from the perspectives of key stakeholders, applying appropriate design values.
8. Explore a design challenge, being prepared to take the lead in formulating a clear and actionable brief, using participatory, empathetic, and creative research methods.
9. Critically evaluate the selection and application of different research methods when applied to design challenges with varying goals and complexities.

|                                                                                                                                                                                                                                                                                                                                                                                                                                 |               |

**SoE No.  
23ME -101**

## B. Tech in Mechanical Engineering

### Professional Elective - II

### VI SEMESTER

### 23ME1621: PE- II Vibration

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. The student will have ability to analyze various types of Vibrations..
2. The student will have ability to measure Vibrations and carry out its analysis..
3. The student will have ability to analyze multi degree freedom systems.
4. The student will have ability to analyze continuous systems.
5. The student will have ability to use of FFT in vibration analysis for condition monitoring purpose.

|                                                                                                                                                                                                                                                                                                                                                                                                                                          |               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>8 Hrs.</b> |
| SINGLE DEGREE OF FREEDOM: Free body diagram, free & forced vibration, un damped and damped single degree of freedom systems subjected to harmonic and other periodic excitations. Impulse response response to arbitrary excitation. Vibration isolation and transmissibility., structural damping                                                                                                                                       |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>7 Hrs.</b> |
| Energy method applied to TWO degree freedom system. Lagranges equation. Generalized mass formulation of mass , damping and stiffness matrix and its numerical solutions . Vibration absorber, conservative and non conservative systems. Geared rotor system, Influence Coefficients and flexibility matrix of bending vibration of beam and multi-disc rotor. Mode shapes and orthogonality principle                                   |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>8 Hrs.</b> |
| Numerical techniques for Multi <b>degree</b> freedom system. systems. Matrix iteration method. Holzer's method for torsional vibration. Dunkerley's method for critical speed determination of multi disc rotor. Rayleigh quotient sweeping matrix method for determination of all the natural frequencies and mode shapes. <b>Rayleigh Ritz</b> method. Modal matrix and expansion theorem. Free and forced response by modal analysis. |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>7 Hrs.</b> |
| Vibration of continuous system. Axial vibration of rod, bending vibration of beam and torsional vibration of shaft. Hamilton's principle and derivation of equation of motion, Rayleigh quotient. Modal co-ordinates and modal forces. Free and forced response through modal analysis                                                                                                                                                   |               |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>8 Hrs.</b> |
| Vibration pickup, seismometers, accelerometer, proximity probe spectrum analyzer, FET & DFT (Discrete FT), torsional, Vibration measurement, Digital vibration measurement, philosophy of vibration. condition monitoring                                                                                                                                                                                                                |               |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>7 Hrs.</b> |
| Noise Control in Mechanical System: Noise Control in Mechanical System: Review of Fundamentals: Noise and vibration measurement units, levels, decibels, spectra. Objective/Subjective noise measurement-scales; Addition and subtraction of decibels; Frequency analysis bandwidths; Industrial Noise and Vibration Control: Basic sources of industrial noise and vibration, basic industrial noise and vibration control methods      |               |
| <b>Total Lecture</b>                                                                                                                                                                                                                                                                                                                                                                                                                     |               |
| <b>45 Hours</b>                                                                                                                                                                                                                                                                                                                                                                                                                          |               |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1622: PE – II- Lab - Vibration

#### Course Outcomes

**Upon successful completion of the course the students will be able to:**

1. The student will have ability to analyze various types of Vibrations..
2. The student will have ability Evaluate vibrations and carry out its analysis..
3. The student will have ability to analyze Predict/judge vibration parameters and evaluate through different approaches for multi degree freedom system.
4. The student will have ability to analyze continuous systems.

**Minimum Eight Practical's to be performed from the list as below**

| SN | Experiments based on                                                                                                                                                |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1  | To determine Frequency of single degree freedom system.                                                                                                             |
| 2  | To Study the Transverse Vibrations of Cantilever Beam and to determine the frequency or period of Vibration (oscillation) theoretically and actually by experiment. |
| 3  | determination of modes shapes for two degree freedom systems                                                                                                        |
| 4  | determination of modes shapes for three degree freedom systems                                                                                                      |
| 5  | To determine natural frequency of Torsional vibration of geared system                                                                                              |
| 6  | To Study the forced vibration of equivalent spring mass System                                                                                                      |
| 7  | To Study the Free Vibration of two rotor and three rotor System and to determine the natural frequency of vibration theoretically & experimentally.                 |
| 8  | To verify the Dunkerley's Rule.                                                                                                                                     |
| 9  | Determination of Whirling of shaft.                                                                                                                                 |
| 10 | To Study the Free Vibration of Multi rotor System and to determine the natural frequency of vibration theoretically & experimentally                                |
| 11 | To study the effect of damping on natural frequency and plot frequency response curves at various damping coefficient.                                              |
| 12 | To determine vibration parameters (Amplitude Velocity acceleration for machines using Vibrometer on Engine                                                          |
| 13 | To determine vibration parameters (Amplitude Velocity acceleration for machines using Vibrometer on Motor                                                           |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1623: PE- II PE-II : Refrigeration Air conditioning and Cryogenics

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Understand and determine various psychrometric properties of air, analyze various psychrometric process and will be able to apply it to live problems.
2. Analyze various types of VCRS and Cryogenics systems.
3. The students will be able to understand about other refrigeration systems

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |               |

### VI SEMESTER

### 23ME1624: PE – II- Lab - Refrigeration Air conditioning and Cryogenics

#### Course Outcomes

Upon successful completion of the course the students will be able to:

1. Understand and determine various psychrometric properties of air, analyze various psychrometric process and will be able to apply it to live problems.
2. Analyze various types of VCRS and Cryogenics systems.
3. The students will be able to understand about other refrigeration systems

**Minimum Eight Practical's to be performed from the list as below**

| SN | Experiments based on                                                                          |
|----|-----------------------------------------------------------------------------------------------|
| 1  | Experiment on Determination of COP of Air conditioning trainer [CO:1]                         |
| 2  | Experiment on Determination of COP of Refrigeration trainer [CO:2]                            |
| 3  | Trial on ice-plant test rig [CO:2]                                                            |
| 4  | Study of expansion devices used in vapour compression refrigeration system [CO:2]             |
| 5  | Study of condensers and cooling towers used in vapour compression refrigeration system [CO:2] |
| 6  | Study of Evaporators used in vapour compression refrigeration system [CO:2]                   |
| 7  | Study of vapour absorption refrigeration system [CO:3]                                        |
| 8  | Study of Electrolux refrigeration system [CO:3]                                               |
| 9  | Study of controls used in refrigeration system [CO:2]                                         |
| 10 | Visit to air liquefaction plant [CO:4]                                                        |
| 11 | Visit to cold storage [CO:4]                                                                  |
| 12 | Visit to Industrial cooling tower [CO:4]                                                      |
| 13 | Visit to ice plant [CO:4]                                                                     |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1625: PE-II: Vehicle Engineering

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. **Classify & Evaluate** various systems of Engine, its function including fuel supply, cooling and lubrication system in vehicle.
2. **Analyze and Discuss** various power transmission systems from clutch to wheel in vehicle.
3. **Analyze** control systems like steering, suspension and brakes in vehicle
4. **Analyze and recommend** the necessary electrical and luxurious systems and safety system in vehicle.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                              |               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>7 Hrs.</b> |
| <b>Introduction to Automobile:</b> Introduction, Automobile history and development and classification. Vehicles layout. Engine Classification, construction and working 2 stroke and 4-stroke cycle. Introduction to Fuel supply system: Carburettor and fuel injection.(Only basic). Engine cooling and lubrication systems.                                                                                                                               |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>7 Hrs.</b> |
| <b>Primary Transmission System:</b> Clutch – Necessity, requirements of a clutch system. Types of Clutches: Single & multi plate clutch, Diaphragm clutch and centrifugal clutch.<br>Gear box: Necessity of gear box with gear theory, working principle, Classification: Sliding mesh, constant mesh, synchromesh, and Transfer case gear box, Gear Selector mechanism, Defects and remedies in Gear box. Working of CVT (Continuous variable transmission) |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>7 Hrs.</b> |
| <b>Secondary Transmission System:</b> Transmission system: Propeller shaft, Universal joint, Hotchkiss drive, torque tube drive.<br>Differential - Need and working principle and Differential lock.<br>Rear Axles and Front Axles<br>Wheel and Tyres: Classification, various constituents of tyres with cross section, specification, factors affecting tyre performance.                                                                                  |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b> |
| <b>Control system of automobile:</b> Steering systems, principle of steering, steering linkages, steering geometry and wheel alignment, steering gear box and its types.<br>Brakes - Need, types: Mechanical, hydraulic (Master and wheel cylinder), Air brakes. Drum and Disc brakes, Comparison Suspension systems – Function, conventional and independent suspension System,                                                                             |               |
| <b>Unit V</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>8 Hrs.</b> |
| <b>Electrical System of Automobile:</b> Electrical systems: Battery construction. Specification. Operation and maintenance of Batteries. Alternator, starter motor, Battery Ignition and magneto ignition systems, Lighting, Horn, Side indicator, wiper. (only basic)                                                                                                                                                                                       |               |

|             |                      |          |                 |         |                                      |

### VI SEMESTER

### 23ME1626: PE – II- Lab - Vehicle Engineering

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. **Classify & Evaluate** various systems of Engine, its function including fuel supply, cooling and lubrication system in vehicle.
2. **Analyze and Discuss** various power transmission systems from clutch to wheel in vehicle.
3. **Analyze** control systems like steering, suspension and brakes in vehicle
4. **Analyze and recommend** the necessary electrical and luxurious systems and safety system in vehicle

**Minimum Eight Practical's to be performed from the list as below**

| SN | Experiments based on                                                               |
|----|------------------------------------------------------------------------------------|
| 1  | Demonstration and analysis of various layouts for automobile.                      |
| 2  | Demonstration of various I.C. Engine systems and components                        |
| 3  | Demonstration of Clutch                                                            |
| 4  | Demonstration of Gear box                                                          |
| 5  | Demonstration of Final drive                                                       |
| 6  | Demonstration of working Hydraulic Braking system                                  |
| 7  | Demonstration of front wheel steering geometry and steering mechanisms.            |
| 8  | Demonstration of suspension system of a four-wheeler.                              |
| 9  | Demonstration of Electrical systems Battery, Charging and self-starting system etc |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1627: PE- II Computer Integrated Manufacturing

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Design and evaluate experimentation on CNC machines.
2. Designing of GT cell layouts for transforming into flexible manufacturing system.
3. Compose and transform robot programs various industrial applications.
4. Justify the role of CAPP and CAQC in computer integrated manufacturing.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |               |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1628: PE – II- Lab - Computer Integrated Manufacturing

#### Course Outcomes

Upon successful completion of the course the students will be able to:

1. **Demonstrate** and **operate** various CAD, CNC, and robotic systems to illustrate the fundamental principles of Computer Integrated Manufacturing.
2. **Develop** and **analyze** part programs for CNC Lathe and Milling machines using both manual and APT programming techniques.
3. **Design** and **evaluate** Group Technology cell layouts and Flexible Manufacturing Systems to optimize manufacturing processes.
4. **Compose** and **simulate** robot programs and automated guided vehicle systems for diverse industrial applications, and **justify** the use of CAPP and CAQC in integrated manufacturing environments.

Minimum Eight Practical's to be performed from the list as below:

| SN | Experiments based on                                                                                                                   |
|----|----------------------------------------------------------------------------------------------------------------------------------------|
| 1  | Study of CIM (Computer Integrated Manufacturing).                                                                                      |
| 2  | Study of CAD systems.                                                                                                                  |
| 3  | Numerical Control – Fundamentals & Applications.                                                                                       |
| 4  | CNC Lathe – Features, Specification, & Part Programming.                                                                               |
| 5  | CNC Milling – Features, Specification, & Part Programming.                                                                             |
| 6  | Group Technology.                                                                                                                      |
| 7  | FMS (Flexible Manufacturing Systems) & CIM.                                                                                            |
| 8  | Computer Aided Process Planning.                                                                                                       |
| 9  | Manual Part Programming.                                                                                                               |
| 10 | APT Part Programming.                                                                                                                  |
| 11 | Robots – Fundamentals and Applications.                                                                                                |
| 12 | AGVS (Automated Guided Vehicle Systems) – Fundamentals and Applications.                                                               |
| 13 | CNC Lathe – Programming, Simulation & Actual Machining of Part (Thread Cutting, Facing, Turning, Grooving, etc.).                      |
| 14 | CNC Milling – Programming, Simulation & Actual Machining of Part (Profile Cutting, Various Interpolation, Pocketing, Mirroring, etc.). |
| 15 | Programming and Simulation of Robot.                                                                                                   |

|             |                      |          |                 |         |                                      |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1629: PE- II I.C. Engines

#### Course Outcomes :

Upon successful completion of the course, the students will be able to.

1. Understand I.C. Engines fundamentals
5. Analyze thermodynamic cycles, fuel injection systems in SI And CI engine
6. Analyze combustion and combustion process in C. I. Engines and S. I. Engine.
7. Analyze Engine performance of I C engine and emissions

|                                                                                                                                                                                                                                                                                                                                                                                                                                  |                               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>8 Hrs.</b>                 |
| Engines classification, Working cycles and operation, P-V, Valve Timing diagrams, Engine components and their material. Engine cycle Energy Balance, various losses in the engine like Frictional losses, blow by losses, pumping loss etc. Engine Lubrication systems, cooling systems and their importance                                                                                                                     |                               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>7 Hrs.</b>                 |
| I.C. Engines fuel and its desirable properties. Requirements of Spark Ignition and Compression Ignition Engine fuel other fuel like CNG, LPG, Alcohols. Rating of I.C. engine fuels.                                                                                                                                                                                                                                             |                               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>8 Hrs.</b>                 |
| S. I. Engine: A-F mixture requirements, Basic principle, Simple Carburetor and systems like main metering, choke, idle, acceleration pump. Operating difficulties for carburetors. Petrol Injection SPFI, MPFI, Direct Gasoline Injection, Ignition system & components for S.I. Engine - Battery, Magneto & Electronic.                                                                                                         |                               |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1630: PE – II- Lab - I.C. Engines

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. Apply concepts of thermodynamics to identify and explain the working of IC engine systems and their subcomponents.
1. Analyze lubrication, cooling, and fuel systems to assess their impact on engine performance and efficiency
2. Evaluate engine performance parameters and prepare heat balance sheets based on experimental observations
3. Apply instrumentation and teamwork to conduct experiments and document technical findings of IC engine tests. Develop Skills in Documentation, Technical Communication, Ethics, and Safety Practices

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                                            |
|----|-----------------------------------------------------------------|
| 1  | Demonstration and working of 2-Stroke Petrol Engine             |
| 2  | Demonstration and working of 4-Stroke Petrol and Diesel Engines |
| 3  | Study of Lubrication Systems in Internal Combustion Engines     |
| 4  | Study of Cooling Systems in Internal Combustion Engines         |
| 5  | Study of Fuel System for Spark Ignition (SI) Engines            |
| 6  | Study of Fuel System for Compression Ignition (CI) Engines      |
| 7  | Performance Testing of a Diesel Engine Setup                    |
| 8  | Heat Balance Sheet for Petrol Engine                            |
| 9  | Heat Balance Sheet for Diesel Engine                            |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1631: PE- II Earth Moving Equipment's

#### Course Outcomes :

Upon successful completion of the course, the students will be able to;

1. **Summarize** the knowledge in Earth Moving Equipments and its Mechanical components.
2. **Summarize** the knowledge in basic Hydraulic hardware system components used in Earth Moving Equipments.
3. **Summarize** the knowledge in Electrical and Electronic system used in Earth Moving Equipments
4. **Analyze and Evaluate** the problems in Earth Moving Equipments systems and provide solution.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |               |

**SoE No.**  
**23ME -101**

## B. Tech in Mechanical Engineering

& dynamic applications. Design consideration for cylinders.

**Hydraulic Circuits:** JIC symbols / ISO Symbols for hydraulic circuits

Different hydraulic circuits used in Construction equipments. Hydraulic circuit analysis

**Unit V:**

**7 Hrs.**

**Electrical and Electronics System:** Basic electrical components switches, cables, colour coding of cables, Relays,.

The basic connections – series and parallel circuits. Electric circuits of earthmoving equipments..

**Electronics Circuits:** Symbols for Electronics circuits

Different Electronics circuits used in earthmoving equipments. Electronics circuit analysis

**Unit VI:**

**8 Hrs.**

**Maintenance of Earthmoving Equipments:** Preventive, predictive & breakdown maintenance.

Trouble shooting & safety precautions. Electronics diagnostic and Computer Aided Diagnostic systems

**Total Lecture**

**45 Hours**

### VI SEMESTER

### 23ME1632: PE – II- Lab - Earth Moving Equipments

#### Course Outcomes

Upon successful completion of the course, the students will be able to;

1. **Summarize** the knowledge in Earth Moving Equipments and its Mechanical components.
2. **Summarize** the knowledge in basic Hydraulic hardware system components used in Earth Moving Equipments.
3. **Summarize** the knowledge in Electrical and Electronic system used in Earth Moving Equipments
4. **Analyze and Evaluate** the problems in Earth Moving Equipments systems and provide solution.

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                                  |
|----|-------------------------------------------------------|
| 1  | Types Of Earthmoving Equipments                       |
| 2  | Hoses, Seals & Hydraulic Oils                         |
| 3  | Mechanical Components Of Earthmoving Equipments       |
| 4  | Study Of Pumps                                        |
| 5  | Study Of Valves                                       |
| 6  | Hydraulic Cylinders And Circuits                      |
| 7  | Basic Electrical And Electronics System               |
| 8  | Trouble Shooting And Computer Aided Diagnostic System |
| 9  | Industry Visit                                        |
| 10 | Industry Visit                                        |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

### VI SEMESTER

### 23ME1633: PE- II Computational Fluid Dynamics

#### Course Outcomes :

**Upon successful completion of the course, the students will be able to;**

- 1.Student will be able to develop an understanding for the major theories, approaches and methodologies used in CFD. [PO 1, PO 2, PO 5]
- 2.Student will be able to build up the skills in the actual implementation of CFD methods (e.g. boundary conditions, turbulence modelling etc.) in using commercial CFD codes. [PO 1, PO 2, PO 5]
- 3.Student will be able to gain experience in the application of CFD analysis to real engineering designs. [PO 1, PO 2, PO 5]
- 4.Student will be able to understand the elimination of numerical errors (verification), modeling errors (validation), and uncertainties for CFD. [PO 1, PO 2, PO 5]

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>8 Hrs.</b> |
| <b>Equations of fluid dynamics :</b> Basic concepts Eulerian and Lagrangian methods of describing fluid flow motion, acceleration and deformation of fluid particle, vorticity, Laws governing fluid motion, continuity, Navier – stokes & energy equations. Boundary layer equation, Euler equations, potential flow equations, Bernoulli's equation and vorticity transport equation. Initial and boundary conditions. Classification of equation of motions – hyperbolic, parabolic, elliptic |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>7 Hrs.</b> |
| <b>Mathematical Preliminaries:</b> Numerical integration. Review of linear algebra, solution of simultaneous linear algebraic equations – matrix inversion, solvers – direct methods, elimination methods, ill conditioned systems, Gauss- Seidel method, successive over relaxation method.                                                                                                                                                                                                     |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>8 Hrs.</b> |
| <b>Grid Generation:</b> General principles of grid generation – structured grid's in two and three dimensions, differential equations based grid generation; Elliptic grid generation, algorithm, Grid refinement, Adaptive grids, Moving grids. Algorithms, CAD interfaces to grid generation.                                                                                                                                                                                                  |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>7 Hrs.</b> |
| <b>Finite Difference Discretisation – I:</b> Elementary finite difference coefficients, basic aspects of finite difference equations, steady and unsteady state heat conduction with FDM approach, consistency, explicit and implicit methods, errors and stability analysis. Stability of elliptic and hyperbolic equations.                                                                                                                                                                    |               |

### VI SEMESTER

### 23ME1634: PE – II- Lab - Computational Fluid Dynamics

#### Course Outcomes

Upon successful completion of the course the students will be able to

- 1.Student will be able to develop an understanding for the major theories, approaches and methodologies used in CFD. [PO 1, PO 2, PO 5]
- 2.Student will be able to build up the skills in the actual implementation of CFD methods (e.g. boundary conditions, turbulence modelling etc.) in using commercial CFD codes. [PO 1, PO 2, PO 5]
- 3.Student will be able to gain experience in the application of CFD analysis to real engineering designs. [PO 1, PO 2, PO 5]
- 4.Student will be able to understand the elimination of numerical errors (verification), modeling errors (validation), and uncertainties for CFD. [PO 1, PO 2, PO 5]

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                    |
|----|-----------------------------------------|
| 1  | Introduction of ANSYS software          |
| 2  | Domain modelling                        |
| 3  | Mesh Generation and Refinement          |
| 4  | Steady state heat transfer problem (2D) |
| 5  | Transient heat transfer problem (2D)    |
| 6  | Steady state heat transfer problem (3D) |
| 7  | Transient heat transfer problem (3D)    |
| 8  | Fluid flow problem 1 (2D)               |
| 9  | Fluid flow problem 2 (2D)               |
| 10 | Fluid flow problem 1 (3D)               |
| 11 | Fluid flow problem 2 (3D)               |
| 12 | Radiation heat Transfer Problem         |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1635: PE- II Solar Energy and Utilization

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Know the fundamentals of geometry of solar radiation and its measurement.
2. Make Students capable of analyzing solar systems and storage.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |               |

### VI SEMESTER

### 23ME1636: PE – II- Lab - Solar Energy and Utilization

#### Course Outcomes

Upon successful completion of the course the students will be able to

1. know the fundamentals of geometry of solar radiation and its measurement.
2. Make Students capable of analyzing solar systems and storage.

Minimum Eight Practical's to be performed from the list as below

| SN | Experiments based on                      |
|----|-------------------------------------------|
| 1  | Solar Radiation Measurements.             |
| 2  | Flat Plate Solar Water Heater.            |
| 3  | Flat Plate Solar Air Heater               |
| 4  | Flat Plate Collector with Reflector.      |
| 5  | Parabolic Tube Collector                  |
| 6  | Evacuated Tube Collector                  |
| 7  | Solar Cookers                             |
| 8  | Thermal Storage System                    |
| 9  | Study on Solar Cell Characteristics.      |
| 10 | Testing of SPV Standalone Systems         |
| 11 | Testing of SPV system with tracking unit. |
| 12 | Performance Evaluation of SPV.            |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### PROFESSIONAL Elective - III

#### VI SEMESTER

#### 23ME1641: PE-III: Tool Design

#### Course Outcomes :

Upon successful completion of the course the students will be able to :

1. Apply the fundamentals of Tool Design.
2. Compute the Design of various cutting tools, Sheet Metal Dies, Jigs / Fixtures and Forging dies.
3. Evaluate the failure modes of tools and costing.
4. Illustrate planning for manufacturing of tools for various components..

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |               |

| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b> |
| Theory of metal Cutting Introduction, Mechanics of chip formation, Cutting tool materials, Single point cutting tool, Designation of cutting tools, ASA system, Importance of Tool angles, Orthogonal rake system, Classification of cutting tools, Types of chips, determination of shear angle, velocity relationship, force relations, Merchant's Theory, Cutting power, Energy consideration in metal cutting, Tool wear, Tool life, Tool life criteria, variable affecting tool life.  |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>8 Hrs.</b> |
| Design of single Point Cutting Tool, Drills- Introduction, Types, Geometry, Design of drill. Milling cutters - Introduction, Types, Geometry, and Design of milling cutters.                                                                                                                                                                                                                                                                                                                |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>7 Hrs.</b> |
| Press tool Design Introduction, Press operations - Blanking, piercing, Notching, Perforating, Trimming, Shaving, Slitting, Lancing, Nibbling, Bending, Drawing, Squeezing. Press working equipment - Classification, Rating of a press, Press tool Equipment, arrangement of guide posts. Press selection, press working Terminology, Working of a cutting die, Types of dies - Simple dies, inverted die, Compound dies, combination dies, progressive dies, Transfer dies, multiple dies. |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>8 Hrs.</b> |
| Bending Forming & Drawing dies Bending methods - Bending Terminology, V- Bending, Air bending, bottoming dies, spring back & its prevention. Design Principles - Bend radius, Bend allowance, Spanking, width of die opening, Bending pressure. Metal flow during drawing, Design, Design consideration - Radius of draw die, Punch radius, Draw clearance, Drawing speed, Calculating blank size, Number of draws, Drawing pressure, Blank holding pressure.                               |               |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>7 Hrs.</b> |
| Forging Die Design: Introduction, Classification of forging dies, Single impression dies, Multiple Impression dies. Forging design factors - Draft, fillet & corner radius, parting line, shrinkage & die wear, mismatch, finish allowances, webs & ribs Preliminary forging operation - fullering, edging, bending, drawing, flatterring, blacking finishing, cutoff. Die design for machine forging – determination of stock size in closed & open die forging.                           |               |

|             |                      |          |                 |         |                                      |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1642: PE- III Reliability Engineering

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Interpret Reliability, Maintainability and Availability of engineering systems.
2. Apply Reliability Modeling as a tool for evaluating system performance.
3. Analyze the failure of a machine and failure rate of systems or components
4. Create production & maintenance schedule of particular engineering system using various tools used for failure data analysis

|                                                                                                                                                                                                                                                                                                                                                                                                         |                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                          | <b>8 Hrs.</b>                 |
| Fundamental concepts:- Reliability definitions, failure, Failure density, Failure Rate, Hazard Rate, Mean Time To Failure, MTBF, maintainability, availability, safety and reliability, Quality, cost and system effectiveness, Life characteristic phases, modes of failure, Quality and reliability assurance rules, product liability, Importance of Reliability                                     |                               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                         | <b>7 Hrs.</b>                 |
| Probability theory: Set theory, laws of probability, total probability theorem, probability distributions, parameters and applications.                                                                                                                                                                                                                                                                 |                               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                        | <b>8 Hrs.</b>                 |
| System reliability and modeling: Series and parallel components, mixed configuration, complex systems. Redundancy, element redundancy, unit redundancy, standby redundancy. Types of standby redundancy, parallel components. Markov models for reliability estimation.                                                                                                                                 |                               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                         | <b>7 Hrs.</b>                 |
| Maintainability and Availability: Objectives of maintenance, types of maintenance, Maintainability, factors affecting maintainability, system down time. Availability - Inherent, Achieved and Operational availability, reliability and maintainability trade-off. Markov models for availability estimation.                                                                                          |                               |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                                          | <b>8 Hrs.</b>                 |
| System reliability Analysis: Reliability allocation or apportionment. Reliability apportionment techniques. Reliability block diagrams and models. Reliability predictions. Life testing and accelerated testing.                                                                                                                                                                                       |                               |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                                                                                                                                                         | <b>7 Hrs.</b>                 |
| Strength based reliability: Safety factor, safety margin, Stress strength interaction, Failure Mode, Effects and Criticality Analysis-, FMECA examples, Ishikawa diagram. fault tree construction, basic symbols development of functional reliability block diagram, Fault tree analysis, fault tree evaluation techniques, Design of Mechanical components and systems:-Material strengths and loads. |                               |

### VI SEMESTER

### 23ME1643: PE- III Advanced Manufacturing Techniques

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. **Distinguish and Identify** the various non-traditional manufacturing process based on energy sources.
2. **Evaluate** various advanced manufacturing process for new materials and the requirements of complex features on the basis of various parameters.
3. **Justify** various advanced welding techniques for different welding applications.
4. **Illustrate** the applications of additive manufacturing techniques in industries.

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1644: PE- III Total Quality Management

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Develop an understanding on quality management philosophies and frameworks.
2. Develop in-depth knowledge on various tools and techniques of quality management.
3. Evaluate the applications of quality tools and techniques in both manufacturing and service industry.
4. Analyze quality management methods and solving problems of organization

|                                                                                                                                                                                                                                            |               |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1645: PE- III Thermal Engineering Systems

#### Course Outcomes :

Upon successful completion of the course, the students will be able to;

1. describe and analyze the Solar, Wind and Biogas Energy Systems
2. Describe and analyze the working of Refrigeration system.
3. evaluate the Psychrometric properties and describe the air conditioning processes.
4. To understand the concept of electric and Hybrid vehicle

#### Unit I:

(8 Hrs.)

**Solar Energy:** Introduction, solar constant, spectral distribution of solar radiation, beam & diffuse radiation, Solar radiation geometry, solar angles. Types of collectors, liquid flat plate collectors, solar air heaters Concentrating collectors, Applications of solar energy to water heating, space heating, space cooling, drying refrigeration, solar cookers, solar thermal electric conversion system, solar photo-voltaic.

#### Unit II:

(7 Hrs.)

##### Wind Energy: -

Power in wind, forces on blades, wind energy: Basic principle of wind energy conversion, basic components of WECS Classification of WEC systems, savonius and darrieus rotors applications of wind energy

##### Biogas: -

Introduction, bio gas generation, fixed dome & floating drum biogas plants their constructional details, raw material for biogas production, factors affecting generation of biogas and methods of maintaining biogas, production, fuel properties of biogas and utilisation of biogas

#### Unit III:

(8 Hrs.)

Refrigeration: Introduction, unit of refrigeration, Vapour compression refrigeration system. Multi stage vapour compression system.

#### Unit IV:

(7 Hrs.)

Introduction, psychrometric properties, Evaporative cooling, Bypass factor, Air Conditioning Processes, Typical summer and winter air conditioning system.

#### Unit V:

(8 Hrs.)

**Electric Vehicle** – Need - Types – Cost and Emissions – End of life. Electric Vehicle Technology – layouts, cables, components, Controls. Batteries – overview and its types.

**Hybrid Electric vehicles** – Classification – Micro, Mild, Full, Plug-in, EV. Layout and Architecture – Series, Parallel and Series-Parallel Hybrid, Propulsion systems and components. Regenerative Braking,

#### Unit VI:

(7 Hrs.)

Energy Auditing Introduction, Global and Indian Energy Scenario, need of importance of energy conversion, Importance of energy audit, Procedure for carrying Energy Audit, Instruments used for energy audit, such as Power Analyser, Multipoint heat flow meter, Lux meter, Portable infrared Radiation thermometer, Thermocouple based temperature indicator. Payback period, Return on investment, Life cycle cost, Sankey diagram, Specific energy consumption.

**Total Lecture**

**45 Hours**

### VI SEMESTER

### 23ME1646: PE- III Optimization Techniques

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Solve linear programming problems using Revised Simplex, Dual Simplex, Duality Theory, and Sensitivity Analysis.
2. Apply advanced linear programming techniques, including Integer, Zero-One, Goal, and Multi-Objective Programming.
3. Develop dynamic programming models for sequential decisions in planning, allocation, and control.
4. Analyse queuing systems using theory and Monte Carlo simulation for performance evaluation.
5. Apply Game Theory and Nonlinear Optimization for strategic decision-making under uncertainty.

|                                                                                                                                                                                                                                                                          |                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                           | <b>8 Hrs.</b>                 |

### VI SEMESTER

### 23ME1647: PE- III Project Evaluation & Management

#### Course Outcomes :

Upon successful completion of the course, the students will be able to

1. **Identify** project ideas based on objectives, SWOT analysis, market demand, and feasibility considerations.
2. **Evaluate** technical feasibility factors such as process selection, automation, plant capacity, and technology acquisition.
3. **Apply** economic feasibility techniques, including cost estimation, working capital analysis, breakeven analysis, and financial projections.
4. **Analyze** project planning and control techniques such as WBS, scheduling, PERT, CPM, and resource allocation.
5. **Develop** a detailed project report including risk assessment, sensitivity analysis, capital-raising methods, and project safety management.

|                                                                                                                                                                                                                                                                                                                                                                         |                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                          | <b>7 Hrs.</b>   |
| Project Identification: Considering objectives and SWOT analysis, Screening of Project Ideas, Technical, Market, Financial, Socioeconomic, Ecological Appraisal of a project, Demand forecasting, Secondary data, Confidence Level, and Uncertainty                                                                                                                     |                 |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                         | <b>7 Hrs.</b>   |
| Economic feasibility: Cost of Project, working capital analysis, fixed cost, means of finance, estimation of sales & production price analysis, Breakeven point, Projected cash flow statements, projected balance sheet, projected profit & loss statement, projected cash flow, rate of return, Discounted payback period, cost-benefit analysis, return after taxes. |                 |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                        | <b>9 Hrs.</b>   |
| Economic feasibility: Cost of Project, working capital analysis, fixed cost, means of finance, estimation of sales & production price analysis, Breakeven point, Projected cash flow statements, projected balance sheet, projected profit & loss statement, projected cash flow, rate of return, Discounted payback period, cost-benefit analysis, return after taxes. |                 |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                         | <b>7 Hrs.</b>   |
| Project Planning and Control: Work breakdown structure and network development. Basic Scheduling, Critical Path, and four kinds of floats. Scheduling under probabilistic durations, Time Cost tradeoffs, CPM, PERT, Optimum project duration, and resource allocation.                                                                                                 |                 |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                          | <b>7 Hrs.</b>   |
| Project report: Preparation of Project Report, Risk Analysis, Sensitivity Analysis, and Methods of Raising Capital.                                                                                                                                                                                                                                                     |                 |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1648: PE- III Fuel Cell Technology

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. **Apply** knowledge of performance, behavior, operational issues and challenges for all major types of fuel cells for its commercialization.
2. **Investigate and Apply** know-how of thermodynamics, electrochemistry, heat transfer, and fluid mechanics principles to design and analysis of this emerging technology.
3. **Design & Analyze** innovative fuel cell systems, fuel cell charge transport and mass transport, the techniques, skills, and modern engineering tools necessary for design and analysis.
4. **Examine and Evaluate** the methodology to design the components of fuel cells and specific type of fuel cell systems.

#### Unit I:

**7 Hrs.**

**Introduction to Fuel Cells :** Brief history of fuel cells, Operating principles, Types of fuel cells- Solid Oxide Fuel Cell (SOFC), Alkaline Fuel Cell (AFC), Molten Carbonate Fuel Cell (MCFC), Phosphoric Acid Fuel Cell (PAFC), Fuel Cell Stack, Advantages, Limitations and Applications of Fuel Cell, Polarization curve for performance characterization of fuel cells, Representing various losses (Activation, Ohmic, concentration loss), Hydrogen Production, Storage and Transportation.

#### Unit II:

**7 Hrs.**

**Fuel Cell Thermodynamics:** Heat Potential (Enthalpy of Reaction), Work Potential (Gibbs free energy), Reversible fuel cell voltage (Nernst equation), Fuel Cell Efficiency. **Fuel cell Thermodynamics mathematical analysis**

#### Unit III:

**7 Hrs.**

**Fuel Cell Electrochemistry :** Electrochemical Reaction basics, Faraday's law, Tafel equation, Butler- Volmer equation, Exchange current, **Electrochemical cell mathematical analysis,**

#### Unit IV:

**8 Hrs.**

**Fuel Cell Charge Transport and Mass Transport :** Ion Transport (Electrolyte), Electron Transport, Gas phase (single phase) mass transport in different fuel cell components (Diffusion layer, flow channels), Multiphase Mass Transport in fuel cell components, Fuel Crossover and Internal Currents, Heat generation and transport in fuel cell. **Fuel cell resistance, and ohmic loss mathematical analysis**

#### Unit V:

**8 Hrs.**

**Fuel Cell Characterization:** In Situ Versus Ex Situ Characterization, Polarization Test, Electrochemical Impedance Spectroscopy, Linear Sweep Voltammetry, Cyclic Voltammetry, Current Interrupt, High frequency resistance. **Demonstration on Electrochemical Software**

|                                                                                     |                                                                                     |                                                                                     |                 |         |                                      |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### 23ME1649: PE- III Design of Experiments and Taguchi Methods

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Apply frequency distribution, histograms, probability, and averages to organize and understand engineering data.
2. Analyse confidence intervals, hypothesis testing, and relationships in data using MINITAB software.
3. Evaluate factorial experiments and response surface methods to find the best settings for engineering processes.
4. Validate the Taguchi method including signal-to-noise ratios and design of experiments to improve process performance.
5. Create new solutions by using statistical techniques to improve efficiency and quality in engineering and industrial applications.

|                                                                                                                                                                                                                                                                                                      |                 |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1701: Automation in Production

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

**CO1:** Design and evaluate product layout using line balancing.

**CO2:** Create and optimize CNC programs for automated machining.

**CO3:** Assess and implement industrial robotics and automation in manufacturing systems

**CO4:** Design GT-based Flexible Manufacturing Systems (FMS) for efficient production.

**CO5:** Apply computer-aided manufacturing (CAM) and automated inspection in modern production systems.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |

### VII SEMESTER

### 23ME1702: Lab - Automation in Production

#### Course Outcomes

Upon successful completion of the course the students will be able to:

1. Design and evaluate product layout using line balancing.
2. Create and optimize CNC programs for automated machining.
3. Assess and implement industrial robotics and automation in manufacturing systems
4. Design GT-based Flexible Manufacturing Systems (FMS) for efficient production.
5. Apply computer-aided manufacturing (CAM) and automated inspection in modern production systems.

Minimum Eight Practical's to be performed from the list as below:

| SN | Experiments based on                                                                                  |
|----|-------------------------------------------------------------------------------------------------------|
| 1. | Practice Programming on Manual Part Program ,Drilling ,Milling                                        |
| 2. | Performance, Simulation on CNC milling with Siemens 828D controller (at least two Complex Geometries) |
| 3. | Performance, Simulation on lathe with Siemens 828D controller (at- least two Complex eometric)        |
| 4. | Practice Programming on APT                                                                           |
| 5. | Case Study on Automated System of any Industry                                                        |
| 6. | Performance/ Practical on Robot. Robot programming using Teach pendant                                |
| 7. | Forward and Inverse kinematics using Simulation softwares                                             |
| 8. | Part Coding and Group Technology case studies                                                         |
| 9. | Study of FMS industrial case studies                                                                  |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1703: Fluid Machines

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Understand the fundamental fluid mechanics concepts to fluid machines.
2. Analyze the performance parameters of hydraulic machines, including power, efficiency, and dimensional characteristics.
3. Apply compressible flow principles, flow characteristics, and evaluate system parameters.
4. Evaluate the performance of compressors (reciprocating. Centrifugal and axial compressor) through thermodynamic process, work done, efficiency, and conditions for optimal operation.

## **B. Tech in Mechanical Engineering**

### **VII SEMESTER**

### **23ME1704: Lab - Fluid Machines**

#### **Course Outcomes**

**Upon successful completion of the course the students will be able to:**

1. Analyze Fluid Machinery Principles and Performance Experimentally
2. Evaluate the Efficiency and Operational Characteristics of Fluid Machines
3. Demonstrate Discipline, Safety, and Collaborative Skills
4. Practice/Develop Documentation, Technical Communication, Problem-Solving, and Lifelong Learning Capabilities

**Minimum Eight Practical's to be performed from the list as below:**

| SN  | Experiments based on                                          |
|-----|---------------------------------------------------------------|
| 1.  | Study of Positive Displacement Rotary Pumps                   |
| 2.  | Trial on Reciprocating Pump                                   |
| 3.  | Trial on Centrifugal Pump                                     |
| 4.  | Trial on reciprocating compressor                             |
| 5.  | Trial on rotary Blower.                                       |
| 6.  | Trial on Pelton wheel                                         |
| 7.  | Trial on Francis Turbine                                      |
| 8.  | Trial on Kaplan Turbine                                       |
| 9.  | Performance testing of a single cylinder I.C. Engine.         |
| 10. | Trial on Petrol Engine with energy balance sheet.             |
| 11. | Heat balance on Multicylinder Diesel Engine.                  |
| 12. | Performance on Vapor Compression Refrigeration System (VCRS). |
| 13. | Performance on air-conditioning system.                       |

|             |                      |          |                 |         |                                      |
|-------------|----------------------|----------|-----------------|---------|--------------------------------------|
|             |                      |          | July, 2023      | 1.00    | Applicable for<br>AY 2023-24 Onwards |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1705: Design of Mechanical Drives

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

1. Summarize the fundamental concepts/impacts while selecting and designing various mechanical drives.
2. Analyze the various forces acting on the elements of the mechanical power transmission system
3. Design an appropriate mechanical drive concerning given input and output parameters.
4. Interpret and develop the virtual prototypes or physical constructions through team/group exercises with ethics and societal use.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |

## B. Tech in Mechanical Engineering

Case study on commercially useful gearboxes, its actual application in higher speeds & power transmission.

**Unit VI:**

**7 Hrs.**

**Bearing:** Classification of bearings, Surface finish, friction wear lubrication, oil seals, and design of journal bearings for radial and thrust loads. Selection of ball and roller bearing for radial and thrust loads. Failures for sliding contact and radial contact bearing.

**Contemporary Issues related to Topic: (May be covered in TA/Visit)**

- Selection of bearing from the manufacturer's catalog. (COEP, Pune)
  - Comparison of sliding contact and rolling contact bearings. (COEP, Pune)
- Comparison between mechanical and magnetic bearing.

**Total Lecture**

**45 Hours**

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1706: Project Phase-II

#### Project - (Phase-2)

Projects help to bridge the gap between theory-based learning and skills-based learning. The projects fulfill the purpose of synthesizing the knowledge acquired during the years and demonstrating the student's aptitude by applying the knowledge.

Project phase -2 may be the extended activity of phase -1.

#### Course Objectives of Major Project (Phase-2):

1. To provide an opportunity of designing and building complete system or subsystems based on areas where the student likes to acquire specialized skills.
2. To obtain hands-on experience in converting a small novel idea / technique into a working model / prototype involving multi-disciplinary skills.
3. To embed the skill in a group of students to work independently on a topic/ problem/ experimentation selected by them and encourage them to think independently on their own to bring out the conclusion under the given circumstances of the curriculum period in the budget provided with the guidance of the faculty.
4. To encourage creative thinking processes to help them to get confidence by planning and carrying out the work plan of the project and to successfully complete the same, through observations, discussions and decision-making process.

The students in a group of not more than FOUR will work under the guidance of the faculty member on the project work undertaken by them. The completion of work, the submission of the report and assessment should be done at the end of the Semester.

#### The project work may consist of,

1. A comprehensive and up-to-date survey of literature related to study of a phenomenon or product.
2. Design of any equipment and / or its fabrication and testing.
3. Critical Analysis of any design or process for optimizing the same.
4. Experimental verification of principles used in applications related to Production Engineering.
5. Product design and development
6. Software development for applications.
7. Industry needs based basic survey or Testing or Analysis etc.
8. A combination of the above.

## B. Tech in Mechanical Engineering

### Course Outcomes for Major-Project (Phase-2)

| CO  | STATEMENT                                                                                                                                                                                                                                                                                                                                                           |
|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO1 | 1) Plan (L5) and accomplish (L6) an innovative engineering mini-project, within given constraints, using knowledge and skills developed during the course.                                                                                                                                                                                                          |
| CO2 | 2) <i>Investigate (L6) a complex problem by formulating (L6) a research question, appraising current literature and developments, and applying (L3) research principles/ methods to produce (L6) scientific content in the form of technical report, thesis, publications, posters and patents.</i>                                                                 |
| CO3 | 3) Apply (L3) technological tools/methods/ software effectively to design (L6)/ formulate and conduct(L6) experiments and then Correlate (L4) the theoretical and experimental/simulations results and draw (L3) the proper inferences to come out with concrete solutions.                                                                                         |
| CO4 | 4) Develop (L6) conceptual and engineering design/ formulation of any process/mechanical components/ system and also to fabricate/ simulate/operate them applying (L3) different technical skills, engineering tools /management principles/ processes/ application software effectively within technical, budgetary, risk, ethical, societal and time constraints. |
| CO5 | 5) Apply (L3) problem-solving methodologies to generate (L6), evaluate (L5) and justify (L4) innovative solutions                                                                                                                                                                                                                                                   |
| CO6 | 6) Reflect (L5) on professional engineering practice, management principles and its impact on the project, including safety, ethical, legal, social, cultural and sustainability considerations, along with knowledge of contemporary issues                                                                                                                        |
| CO7 | 7) Demonstrate (L3) professionalism, integrity, ethical conduct and professional accountability in all aspects of project work, including teamwork and multidisciplinary approach.                                                                                                                                                                                  |
| CO8 | 8) Demonstrate (L3) effective professional written and oral communication to a variety of audiences through proposals, reports, documentation and presentations.                                                                                                                                                                                                    |
| CO9 | 9) Justify (L5) the need for lifelong learning activities to cope up with technological changes.                                                                                                                                                                                                                                                                    |

|             |                      |          |                 |         |                                      |

# Yeshwantrao Chavan College of Engineering

(An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University)

**B. Tech SoE and Syllabus 2023**  
(Scheme of Examination w.e.f. 2023-24 onward)  
(Department of Computer Technology)

**SoE No.  
23ME -101**

## B. Tech in Mechanical Engineering

### Professional Elective - IV

#### VII SEMESTER

### 23ME1721: PE-IV Design for Manufacturing & Assembly

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Understanding and Application of Design Principles.
2. Designing for Metal Casting
3. Optimizing for Machining and Metal Joining Processes
4. Analyze the different requirements of Automated assembly **based on Designed parameters**
5. Analyze and apply the various design **concept** related to manual assembly for designed product.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |               |

## B. Tech in Mechanical Engineering

assemble method assemble advantages social effects of automation.

**Automatic Assembly Transfer Systems:** Continuous transfer, intermittent transfer ,indexing mechanisms, and operator- paced free-transfer machine

**Unit VI:**

**7 Hrs.**

**Design Of Manual assembly:** Design for assembly fits in the design process, general design guidelines for manual assembly, development of the systematic DFA methodology, assembly efficiency, classification system for manual handling, classification system for manual insertion and fastening, effect of part symmetry on handling time, effect of part thickness and size on handling time, effect of weight on handling time, parts requiring two hands for manipulation, effects of combinations of factors, effect of symmetry effect of chamfer design on insertion operations, estimation of insertion time.

**Total Lecture**

**45 Hours**

### VII SEMESTER

### 23ME1722: PE-IV Piping Design

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Describe the basic concepts of Piping design and Engineering.
2. Apply the basic concepts involved in design and selection of components and equipment in piping design.
3. Apply the knowledge of design and engineering for Vibration analysis and preparation of process diagram and piping diagram.
4. Describe the application of international standards for piping design

|                                                                                                                                                                                                                                                                                                                                                                                                             |               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b> |
| Fundamentals of Piping Design and Engineering: Introduction to piping designing & engineering, Evolution of piping, Manufacturing methods, Piping materials and selection, Pipe dimensioning, Schedule numbers, Common piping abbreviations, Major organizations for standards, Commonly American code in piping ASME/ANSI, Common abbreviations.                                                           |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                             | <b>7 Hrs.</b> |
| Basic Piping components and Equipment: Type of Fittings, flanged fittings and use of fittings, P-T ratings and facings, Gaskets, bolts and nuts, Major Valves - Types, Materials operations, applicability, codes and specifications, Horizontal vessels/accumulators, fractionation columns, pumps, heat exchangers, re-boiler, air cooled heat exchanger, cooling towers, heaters/boilers, storage tanks. |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                            | <b>8 Hrs.</b> |
| Design/Analysis of Piping System : Design and stress analysis of piping system, Pipe fittings, elbows and flange design, stresses in elbows and flanges, Failure theories, Piping network analysis. Design calculation of wall thickness and working pressure. Use of FEM and software tools. Pipeline sizing, Design criterion; least annual cost criterion, velocity criterion, Pressure drop criterion.  |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                             | <b>7 Hrs.</b> |
| Vibration Problem in Piping System : Vibration analysis of piping system, Determination of natural frequency, damping and mode shape. Design of experiments for piping system. Estimation of leakage of piping connections/joints.                                                                                                                                                                          |               |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b> |
| Piping Engineering Flow Diagram and Piping Diagram: Uses of flow diagrams, process flow diagrams, mechanical flow diagrams, utility flow diagrams, piping symbols, line symbols, valve symbols, Purpose of P&ID in process industrial/plants. Plant Co-ordinate Systems, Site Plans, Unit Plot Plan, Equipment Location Drawing, Foundation Location Drawing, Pipe Rack Spacing                             |               |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                                                                                                                                                             | <b>7 Hrs.</b> |
| ASME Engineering and pressure design: Pipe wall thickness calculations, operating pressure, design pressure, operating & design temperature ,max allowable operating pressure, Pressure design of Pipe, elbows, mitre bends, reinforcement pad calculation for branch connections, flanges, blanks, expansion joints and gaskets.                                                                           |               |

### VII SEMESTER

### 23ME1723: PE-IV Additive Manufacturing

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Understand current technology and additive manufacturing trends, the working principles, and process parameters of additive manufacturing processes .
2. Explore and summarize different additive manufacturing processes with materials, suggesting suitable methods for building a particular component.
3. Design and develop a working model using different techniques.
4. Discuss the contemporary issues in processing software/algorithms and testing.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |               |

| <b>Additive Manufacturing (AM) Overview:</b> Introduction to AM, AM evolution, Distinction between AM & CNC machining, Product development cycle, Concept of Regenerative Engineering (RE), and use of AM in R, Reverse Engineering, Industry 4.0 design principle - Future with AM, smart manufacturing, current industry and manufacturing trends driving AM, Printing process, emerging applications, Applications and current usage of AM in the medical device industry, and Future trends. Contemporary Issues related to Topic: (May be covered in TA/Case Study) - Generalized additive manufacturing steps.                                                                                   |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>7 Hrs.</b> |
| <b>AM Technologies &amp; Limitations of AM Systems:</b> Classification of AM technologies, AM process parameters, VAT photopolymerization, Material jetting (MJ), Binder jetting, Material extrusion, Powder bed fusion, Sheet lamination, Directed Energy Deposition (DED), New AM technologies, - Laser & electron beam theory concept- types & properties, Potential Hazards of Additive Manufacturing. Contemporary Issues related to Topic: (May be covered in TA/Research Paper Study/Visit) Other advanced methods can be covered.                                                                                                                                                              |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>8 Hrs.</b> |
| <b>Materials Science for AM:</b> Types of materials in AM, Multifunctional and graded materials in AM, Role of solidification rate, Evolution of non-equilibrium structure, microstructural studies, Structure-property relationship. - Wire Properties for DED, Powder Properties for PBF, DED, and BJ, Methods of Powder particle production, Mechanical properties of AM printed parts, Defects, Form, fit, function trade-off, time and cost. Contemporary Issues related to Topic: (May be covered in TA/Research Paper Study/Visit)- Case studies should be discussed and assigned for more clarification.- A case study on non-destructive testing can be discussed/given for the printed part. |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>7 Hrs.</b> |
| <b>CAD Models for AM:</b> CAD file formats, CAD CAM software, Modelling and Data Processing, Solid modeling (Introduction-Types), Tessellation, error minimization, firmware interface with 3-D Models, STL File: Introduction-data structure- ASCII-Binary-resolution-deviation & angle tolerance, Manipulation of STL files: Orientation of STL file-support structure-optimal part orientation, topology optimization & techniques, Steps for build file preparation, Issues with STL file format. Cost for additive manufacturing, waste identification, cost categories, and cost models. Contemporary Issues                                                                                     |               |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1724: PE-IV Maintenance Management

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Apply and Demonstrate the maintenance function, , classification and condition monitoring of mechanical systems
2. Analysed the failure of a machine and plan the maintenance program for equipments.
3. Calculate repair and maintenance cost and evaluate maintenance performance
4. Interpret maintenance needs of mechanical devices and assistance of CAMS.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>8 Hrs.</b> |
| <b>Introduction :</b> Maintenance – basic concepts, purpose, functions and objectives of maintenance, Principles, benefits and effects of maintenance, Inter-relationship between productivity, quality, reliability and maintainability, maintenance productivity ,quality in maintenance. Reliability, basic concepts, bathtub curve, failure rate, mean time before failure. System reliability, reliability of series and parallel systems. Maintainability, mean time to failure, mean time to repair. Availability– Contemporary Issues related to Topic |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>7 Hrs.</b> |
| <b>Types of Maintenance:</b> Maintenance strategies / systems–type – basis for selection. Breakdown maintenance, corrective maintenance. Preventive maintenance, Predictive maintenance. Reliability centered maintenance (RCM), replacement policies- cyclic replacement, group replacement, standbys, economics of machine replacement, Dismantling and assembling, Inspection and adjustments, Lubrication, maintenance welding, maintenance machining, , material improvement, maintenance cleaning.                                                       |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>8 Hrs.</b> |
| <b>Condition Based Maintenance:</b> Condition based maintenance and condition monitoring – monitoring systems. Performance monitoring – visual, tactile and aural monitoring, leakage monitoring. Temperature monitoring Thickness monitoring, acoustic monitoring Smell / odour monitoring. Vibration monitoring –vibration analysis. Vibration transducers– types. Lubricant monitoring filter debris analysis spectroscopic oil analysis, Contemporary Issues related to Topic                                                                              |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>7 Hrs.</b> |
| <b>Failure analysis:</b> Failure analysis: Defect and failure – definitions – basics of failures – failure generation – failure analysis. Fault tree analysis (FTA), Event tree analysis (ETA), Root cause analysis (RCA), Failure modes and effects analysis (FMEA), Failure mode effect criticality analysis, , Contemporary Issues related to Topic                                                                                                                                                                                                         |               |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>8 Hrs.</b> |
| <b>Advanced Maintenance:</b> Total productive maintenance (TPM) , basic systems of TPM, TPM and terotechnology. Six sigma maintenance. Lean maintenance – 5-zero maintenance concept, 5-S maintenance conceptsix pillars, and success factors. Maintenance effectiveness, overall equipment                                                                                                                                                                                                                                                                    |               |

## B. Tech in Mechanical Engineering

effectiveness, key performance indicators, maintenance performance measuring indices, , Contemporary Issues related to Topic

### Unit VI:

**7 Hrs.**

**Maintenance planning and scheduling:** Maintenance planning and scheduling. Maintenance organization, objectives and characteristics centralized and decentralized maintenance. Maintenance costs, classification of maintenance costs – maintenance cost analysis cost effectiveness analysis.– preparation of maintenance budget, Approach towards computerization, selection and scope of computerization, equipment classification, preventive maintenance and repair planning module, material management module, captive engineering shop module, Contemporary Issues related to Topic

**Total Lecture**

**45 Hours**

### Textbooks:

1. Industrial Maintenance management by S.K.Shrivastava, S.Chand Publication

### Reference Books:

1. Maintainability and maintenance management 1991 J. Patton Maus, R. and Keyes
2. Maintenance engineering handbooks 2008 Mobley and Higgins Mc-graw Hill

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1725: PE-IV Renewable Energy System

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

1. **Explain** the fundamental concepts, working principles, and applications of solar radiation, wind energy, biomass, tidal, geothermal, and other renewable energy sources.
2. **Apply** the principles of Magneto Hydro Dynamic (MHD) power generation and electrochemical processes involved in hydrogen fuel cells to evaluate its feasibility as a sustainable energy conversion method.
3. **Analyze** the performance, design, and efficiency of various solar collectors, wind energy conversion systems, tidal and biomass gasifiers for effective energy utilization.
4. **Evaluate** the potential, operational efficiency, and feasibility of geothermal energy systems under varying environmental and site-specific conditions.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                          |               |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>8 Hrs.</b> |
| <b>Solar Energy:</b> Introduction, solar constant, spectral distribution of solar radiation, beam & diffuse radiation, measurement of solar radiation and measuring instruments. Solar radiation geometry. Types of solar collectors, Flat Plate & Concentrating Collectors. Application of Solar Energy-Thermal and photovoltaic.                                                                                                                       |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>7 Hrs.</b> |
| <b>Biogas and Biomass:</b> - Types of Biogas plants, Methods of Biogas generation, factors affecting the biogas generation. <b>Gasifiers:</b> classification of gasifiers & basic constructional details and basic chemistry of gasification.                                                                                                                                                                                                            |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>8 Hrs.</b> |
| <b>Wind energy:</b> - Basic principle of wind energy conversion, wind velocity and power from wind; Basic components of wind energy conversion system (WECS); Classification of WECS- Horizontal axis- single, double and multiblade system. Vertical axis- Savonius and Darrieus types. applications of wind energy. Site selection, Merits & demerits of wind power generation.                                                                        |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>7 Hrs.</b> |
| <b>OTEC &amp; Tidal energy:</b> Introduction: - Principle of working, Rankine cycle, ocean thermal electric conversion open and closed cycle of OTEC, hybrid cycle, energy from tides basic principles of tidal power & components of tidal power plants, single & double basin arrangement, estimation of tidal power and energy, Advantages & Limitation of Tidal Power, Energy from ocean waves -energy availability, wave energy conversion devices. |               |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1726: PE-IV Control System Engineering

#### Course Outcomes :

**Upon successful completion of the course the students will be able to**

- Analyze** control systems using block diagrams and signal flow graphs with Mason's Gain Formula.
- Illustrate** the mathematical representation of various control system and determine the transfer function of mechanical, electrical, thermal and fluid system.
- Examine** the working of various control system components of electrical motor and hydraulic system.
- Evaluate** the performance of control system using time response analysis.
- Create** the performance of control system on the basis of frequency response and root locus and design suitable compensation for the control system.

|                                                                                                                                                                                                                                                                                                                                                            |               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                             | <b>8 Hrs.</b> |
| <b>Introduction:</b> -Introduction, System concept Open and Closed loop control systems. Transfer function, Mathematical Modelling of Physical System and system representation through Block Diagram. Transfer function through Block Diagram Simplification. Signal Flow Graph, Masons Gain Formula Block diagrams of various control systems.           |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                            | <b>7 Hrs.</b> |
| <b>Mathematical Modelling:</b> Representation of Control components: Mechanical and Electrical components; Analogous systems.                                                                                                                                                                                                                              |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                           | <b>8 Hrs.</b> |
| <b>Electrical system:</b> Ac/dc servomotors; field controlled and armature-controlled servomotors; positional servomechanisms, Potentiometer, Synchro, stepper motors. Hydraulic systems: - Hydraulic pumps (gear; vane; and reciprocating piston) Cylinders, Direction control valves (2, 3, 4 way) Flow control valve; Relief valve Hydraulic servomotor |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                            | <b>7 Hrs.</b> |
| <b>Time response analysis:</b> Transient and steady state response of first and second order systems Concept of stability; relative stability; Routh stability criteria.                                                                                                                                                                                   |               |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                             | <b>8 Hrs.</b> |
| <b>Bode and Polar plot:</b> Frequency response and its characteristics; Bode plots; Polar plots, Nyquist plots. Gain margin and phase margin. Identification of system transfer function.                                                                                                                                                                  |               |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                                                                                                            | <b>7 Hrs.</b> |
| <b>Locus:</b> Basic control actions; Proportional Integral and Derivative control actions and their effect on system performance. Root locus technique. Introduction to control system design log load compensation Feed Back Compensation and Pole -Zero placements .                                                                                     |               |
| <b>Total Lecture</b>                                                                                                                                                                                                                                                                                                                                       |               |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1727: PE-IV Industrial IoT

#### Course Outcomes :

Upon successful completion of the course, the students will be able to

1. Understand the fundamental principles of IIoT and its relevance to mechanical systems.
2. Apply IIoT technologies in monitoring, controlling, and optimizing mechanical processes.
3. Analyze the integration of sensors, data acquisition systems, and communication protocols in mechanical systems.
4. Evaluate the performance and benefits of IIoT-enabled mechanical systems in industrial applications.

|                                                                                                                                                                                                                                                                   |               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                    | <b>7 Hrs.</b> |
| <b>Introduction to IIoT in Mechanical Systems:</b> Definition and architecture of IIoT, Differences between IoT and IIoT, Relevance of IIoT in mechanical engineering, Components: Sensors, Actuators, Edge Devices, Use cases in manufacturing, HVAC, automotive |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                   | <b>7 Hrs.</b> |
| <b>Sensors and Data Acquisition:</b> Types of sensors used in mechanical systems (temperature, pressure, vibration, flow), Signal conditioning and data acquisition systems, Sensor calibration and accuracy, Case studies: CNC machines, thermal systems         |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                  | <b>8 Hrs.</b> |
| <b>Networking and Communication Protocol:</b> Industrial communication protocols: MQTT, Modbus, OPC-UA, Zigbee, Wired vs Wireless communication in industrial settings, IoT gateways and edge computing, Cybersecurity considerations in IIoT.                    |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                   | <b>8 Hrs.</b> |
| <b>Data Analytics and Cloud Integration:</b> Basics of data analytics for mechanical systems, Cloud computing platforms: AWS IoT, Azure IoT Hub, Edge vs Cloud processing, Predictive maintenance using IIoT analytics                                            |               |
| <b>Unit V:</b>                                                                                                                                                                                                                                                    | <b>8 Hrs.</b> |
| <b>Automation and Control in IIoT:</b> SCADA and PLC integration with IIoT, Closed-loop control systems using IIoT, Real-time monitoring and actuation, Digital Twin concept in mechanical systems                                                                |               |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                   | <b>7 Hrs.</b> |
| <b>Case Studies and Industrial Applications:</b> Smart factories and Industry 4.0, IIoT in energy systems (pumps, turbines, compressors), Retrofitting legacy mechanical systems with IIoT, Challenges and future trends in IIoT for mechanical                   |               |
| <b>Total Lecture</b>                                                                                                                                                                                                                                              |               |

### VII SEMESTER

### 23ME1728: PE-IV Artificial Intelligence

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Examine the issues involved in knowledge bases, reasoning systems and planning
2. Design and evaluate intelligent expert models for perception and prediction from intelligent environment.
3. Apply AI frameworks and platforms to improve business, organizational, and technology outcomes.
4. Analyze the concept of neural networks for learning linear and non-linear activation functions.

### VII SEMESTER

### 23ME1729: PE-IV Finance & Cost Management

#### Course Outcomes :

Upon successful completion of the course, the students will be able to;

1. **Explain** the fundamental concepts of business finance and interpret financial statements.
2. **Classify and differentiate** various types of costs involved in business operations.
3. **Analyze** overhead costs and prepare cost statements to identify areas for cost reduction.
4. **Apply** marginal costing techniques for effective managerial decision making in different business scenarios.

(Scheme of Examination w.e.f. 2023-24 onward)

(Department of Computer Technology)

## B. Tech in Mechanical Engineering

SoE No.  
23ME -101

### Professional Elective - V

### VII SEMESTER

### 23ME1741: PE-V Non Ferrous Alloys

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. **Identify** and **classify** various engineering materials and non-ferrous alloys based on their properties, microstructures, and industrial applications.
2. **Analyze** the influence of alloying elements and heat treatment processes (e.g., age hardening) on the microstructure and mechanical properties of aluminum and Magnesium its alloys.
3. **Interpret** the structure-property relationships, processing methods, and surface treatments of titanium-based alloys used in critical automotive components.
4. **Examine** phase diagrams and microstructures of non-ferrous alloy systems such as Cu-Zn (Brass), Cu-Sn (Bronze), Al-Si, Al-Cu, and bearing materials to determine their properties and suitable application

|                                                                                                                                                                                                                                                                                                                                                                                           |               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                            | <b>8 Hrs.</b> |
| Introduction to materials, classification of materials. Properties and applications of materials. Introduction of Nonferrous Alloy, classification, characterization, microstructure analysis and its applications.                                                                                                                                                                       |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                           | <b>8 Hrs.</b> |
| Aluminium: Enhancing properties of aluminium for auto applications; classification system and grades of alloys; roles of alloy additions on properties; significance of various equilibrium diagrams in designing alloys; solution treatment (age hardening) and microstructural changes; chemical compositions & properties.                                                             |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                          | <b>7 Hrs.</b> |
| Aluminium alloys: Properties, environmental benefits of recycling. aluminium alloy melting practices; component forming processes – castings, extrusions, sheet forming and forgings, material defects and their significances on properties and performances on end product; automotive applications of aluminium alloys and manufacturing processes for body to power train components. |               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                           | <b>8 Hrs.</b> |
| Magnesium Base Alloys: Properties and benefits over other traditional metals; classifications of alloys; melting practices; manufacturing processes – casting, extrusion and forging processes; solution treatment and microstructures; alloy compositions and properties; surface coatings; auto applications and limitations.                                                           |               |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                            | <b>7 Hrs.</b> |
| Titanium Base Alloys: Properties and benefits over other traditional metals; classifications of alloys; melting practices; manufacturing processes – casting, extrusion and forging processes; solution treatment and microstructures; alloy compositions and properties; surface coatings; auto applications and limitations.                                                            |               |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1742: PE-V Product Design and Development

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Describe principles and stages of product design and concept generation.
2. Apply material and process selection techniques with software tools.
3. Analyze product concepts using value engineering and costing methods.
4. Create prototypes integrating ergonomics and rapid prototyping methods.

|                                                                                                                                                                                                                                                                                                                                                                                             |                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                              | <b>7 Hrs.</b>   |
| <b>Introduction to Product Design and Development</b> : Product design and its industrial relevance, Product life-cycle and development cycle, Types of design: Engineering, industrial, and system design, Phases: Conceptual, embodiment, detailed design, Product definition and specification, Concept generation and evaluation tools (SCAMPER, Brainstorming, Morphological Analysis) |                 |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                             | <b>7 Hrs.</b>   |
| <b>Material and Process Selection:</b> Importance and classification of engineering materials, Performance characteristics and selection criteria, Ashby's material selection charts and case studies, Manufacturing process classification and selection methods, Expert systems, database approaches, decision matrices, AHP, Fuzzy logic, and selection software tools                   |                 |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                            | <b>7 Hrs.</b>   |
| <b>Design for X (DFX), Value Engineering, and Benchmarking:</b> DFX principles: DFM, DFA, DFS, DFQ, Value Engineering (VE): Types of values and functions, Functional analysis and FAST diagrams, DARSIRI method of value analysis, Benchmarking techniques and examples, Robust design, QFD, early supplier involvement, concurrent engineering                                            |                 |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                             | <b>8 Hrs.</b>   |
| <b>Economic Analysis and Product Costing</b> : Time Value of Money, Cost comparison, depreciation methods, Taxation, inflation, and investment appraisal, Sensitivity analysis, Cost estimation methods in design phase                                                                                                                                                                     |                 |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b>   |
| <b>Ergonomics and Creative Thinking:</b> Principles of ergonomic design, Anthropometry and human factors, Cognitive ergonomics and interface design, Creative thinking techniques: TRIZ, lateral thinking, design heuristics, Case studies of user-centered designs                                                                                                                         |                 |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                                                                                                                                             | <b>8 Hrs.</b>   |
| <b>Prototyping and Product Realization:</b> Role and types of prototypes, Rapid prototyping techniques: SLA, FDM, SLS, Accuracy, limitations, and material considerations, Economic factors and adoption strategy, Integration of RP in product development cycle                                                                                                                           |                 |

### VII SEMESTER

### 23ME1743: PE-V Engineering of Plastics

#### Course Outcomes :

Upon successful completion of the course, the students will be able to

1. Identify polymers based on their chemistry, physical properties, applications, advantages, and limitations
2. Illustrate the processes of extrusion, blow molding, casting, thermoforming, rotational molding, injection molding, compression molding, filament winding, and pultrusion, including mold design principles.
3. Examine the machining properties and parameters of plastics, their impact on processes, and the methods for joining plastics, including mechanical fasteners, thermal bonding, and press-fitting.
4. Distinguish the different compositions of plastics' solid and liquid-state fabrication techniques.
5. Assess various polymer processing and composite fabrication techniques, evaluating their advantages, limitations, and suitability for specific engineering applications.

|                                                                                                                                                                                                                                                                                            |               |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1744: PE-V Power Plant Engineering

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Apply the knowledge of thermodynamic law and Understand the various systems of thermal power plant.
2. Analyse of hydraulic power plants
3. Analyse economics of power plants and list factors affecting the power plants load & Evaluate economic condition of power generations systems
4. Understand and Analyse nuclear power plant and discuss safety aspect.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |               |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1745: PE-V Turbines

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Understand the working principles of impulse water turbines
2. Apply the momentum principle to analyze velocity triangles of turbines.
3. Analyze the impact of draft tubes on turbine performance
4. Evaluate the efficiency and power output of reaction turbines.

|                                                                                                                                                                                                                                                                                                                                                                                 |                 |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1746: PE-V Industry 4.0

#### Course Outcomes :

**Upon successful completion of the course, the students will be able to:**

1. Articulate the recent manufacturing trends related to Industry 4.0 and its implementation.
2. Interpret concepts and basic framework necessary for smart manufacturing.
3. Develop understanding about harnessing smartness into manufacturing processes from the data.
4. Able to find the applications of all the areas in day to day life.

| Unit I:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | 8 Hrs. |

### VII SEMESTER

### 23ME1747: PE-V Machine Learning in Manufacturing

#### Course Outcomes :

Upon successful completion of the course, the students will be able to;

1. Explain the fundamental concepts of Artificial Intelligence
2. Apply the basic concepts of Planning and Reasoning required for machine learning.
3. Evaluate the performance of supervised and unsupervised learning required for machines
4. Illustrate the knowledge of Natural Language Processing and its applications
5. Apply Dimensionality Reduction and Natural Language Processing in Robotics

|                                                                                                                                                                                                                                                                                                                                                                                       |                               |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1748: PE-V Surface Engineering

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Select a conventional surface engineering treatment for a specific application
2. Design a suitable thermal spray technique for surface modification of various materials
3. Deploy laser modification of surfaces to enhance properties
4. Select and use an appropriate deposition technique for various materials

|                                                                                                                                                                                                                                                                                                                                                                                                                                                           |               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>8 Hrs.</b> |
| <b>Introduction: Fundamental of surface engineering</b> – Philosophy of surface, broken bond concept, defects, general applications and requirements. Surface dependent properties and failures of engineering components. Surface engineering – Scope, Classification, definition and general principles.                                                                                                                                                |               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>7 Hrs.</b> |
| <b>Conventional Surface Engineering</b> :Surface Degradation: Basic principles of electrochemistry and aqueous corrosion processes Oxidation and related concept Mechanical Friction and Wear like abrasive, erosive and sliding wear etc. Interaction between wear and corrosion. Conventional Techniques Cleaning, pickling, etching, grinding, polishing and diffusion process - carburizing, nitriding , Electroless and Electroplating , Anodization |               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>8 Hrs.</b> |
| <b>Advanced Surface Engineering Practices:</b> Thermal spray technologies –introduction - APS and HVOF - Effect of process parameters on coating properties , Cold spraying , warm spraying and Solution plasma spraying.                                                                                                                                                                                                                                 |               |

## B. Tech in Mechanical Engineering

### VII SEMESTER

### 23ME1749: PE-V Green Technology

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. Realize the importance of green technologies in sustainable growth of Industry and society.
2. Adopt alternative methods and solvents for green synthesis.
3. Develop Cleaner production and treatment mechanism for pollution prevention..
4. Design and implementation of suitable energy-efficient processes.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                 |

| <b>Green synthesis and Solvents:</b> Green methods of synthesis- microwave assisted synthesis, solvent free techniques- Reaction on solid supports. Alternative solvents Ionic liquids- general synthesis, applications; super critical fluids- extraction, process and applications.                                                                                                                                                                                                         |                 |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b>   |
| <b>Cleaner development technologies:</b> Cleaner development mechanisms, role of industry; reuse, reduce and recycle, raw material substitution; wealth from waste; carbon credits, carbon trading, carbon sequestration, eco labelling. Oxidation technology for waste water treatment- Cavitation, Fenton chemistry, photocatalysis and hybrid processes.                                                                                                                                   |                 |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>7 Hrs.</b>   |
| <b>Energy efficient systems and processes:</b> Energy efficient motors, energy efficient lighting, control and selection of luminaries; bio-fuels, fuel cells- working, selection of fuels, Green manufacturing systems, selection of recyclable and environment friendly materials in manufacturing, design and implementation of sustainable green production systems.                                                                                                                      |                 |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>8 Hrs.</b>   |
| <b>Conventional Energy Sources:</b> Availability and need of conventional energy resources, major environmental problems related to the conventional energy resources, future possibilities of energy need and availability. Non-conventional energy sources: Solar Energy-solar energy conversion technologies and devices, their principles, working and application.                                                                                                                       |                 |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>7 Hrs.</b>   |
| <b>Green Fuels:</b> Green Fuels – Definition-benefits and challenges – comparison of green fuels with conventional fossil fuels with reference to environmental, economical and social impacts- public policies and market-driven initiatives. Biomass energy: Concept of biomass energy utilization, types of biomass energy, conversion processes, Wind Energy, energy conversion technologies, their principles, equipment and suitability in Indian context; tidal and geothermal energy. |                 |
| <b>Total Lecture</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                 |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>45 Hours</b> |

### VIII SEMESTER

### 23ME1801: Production Management

#### Course Outcomes :

**Upon successful completion of the course the students will be able to:**

1. Ability to estimate and evaluate production system using work study.
2. Ability to design and evaluate plant layouts.
3. Ability to predict and evaluate future demand using forecasting.
4. Ability to estimate production costing and apply by judging production planning and control

|                                                                                                                                                                                                                                                                                               |                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                | <b>8 Hrs.</b>   |
| <b>Work Study::</b> Productivity, factors affecting productivity. Measurement of productivity. Work study and methods study: Definitions, objectives, steps in method study, Process charts, string diagram, motion study, micro motion study, SIMO charts                                    |                 |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                               | <b>7 Hrs.</b>   |
| <b>Work measurement:</b> Objectives, definition, stop watch study, work sampling, PMTs, MTM & Work factor method Value analysis and value Engineering:, Introduction, steps involved in value analysis. Applications in Manufacturing.                                                        |                 |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b>   |
| <b>Plant Layout:</b> Types of Plant Layout, Layout Functions and problems, Organization. Automated material handling, Concepts of AGVs, AS/RS and other automated devices. Design of integrated plant layout for product handling system..                                                    |                 |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                               | <b>7 Hrs.</b>   |
| <b>Forecasting:</b> Need for forecasting, classification of forecasting methods, like judgmental technique, time series analysis, least square method, moving average method, exponential smoothing method.                                                                                   |                 |
| <b>Unit V:</b>                                                                                                                                                                                                                                                                                | <b>8 Hrs.</b>   |
| <b>Production planning and control:</b> Definition, objectives of PPC, functions of PPC, types of production, Inventory control, EOQ, Techniques in inventory control and associated problems.                                                                                                |                 |
| <b>Unit VI:</b>                                                                                                                                                                                                                                                                               | <b>7 Hrs.</b>   |
| <b>Process analysis and Cost Estimation:</b> Steps involved in manual production planning, Selection of process, analysis. Aims of Cost Estimation, Difference between cost and Estimation, Elements of cost: material, Product cost, Analysis of overhead expenses, Product cost estimation. |                 |
| <b>Total Lecture</b>                                                                                                                                                                                                                                                                          | <b>45 Hours</b> |

## B. Tech in Mechanical Engineering

### Track 1

### V SEMESTER

### (MDM3ME103) Basics of Machine Design

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Explain the role of machine design and engineering materials in creating reliable and efficient products. (L2)
2. Describe the function and selection principles of common machine elements and power transmission components. (L2)
3. Apply the design thinking process to develop simple mechanical design solutions using modern tools and AI. (L3)
4. Analyze the effects of static and dynamic loads on mechanical components using basic stress and load diagrams. (L4)

|                                                                                                                                                                                                                                                                                                                                                                     |                               |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                      | <b>6 Hrs.</b>                 |
| <b>Introduction to Machine Design and Engineering Materials:</b> Role and importance of machine design in engineering systems, Types of design: Adaptive, Creative, and Developmental, Design considerations: reliability, ergonomics, aesthetics, manufacturing, economics, Introduction to Engineering materials: ferrous, non-ferrous, polymers, and composites. |                               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                     | <b>9 Hrs.</b>                 |
| Design for Static and Dynamic Loading: Types of loads: static, impact, fatigue, fluctuating, Stress-strain relationships; concepts of yielding and fracture, Factor of safety, stress concentration and their implications, Shear Force Diagram and Bending Moment Diagram.                                                                                         |                               |

## B. Tech in Mechanical Engineering

### VI SEMESTER

### (MDM3ME104) Computer Aided Design

#### Course Outcomes :

Upon successful completion of the course the students will be able to:

1. **Explain** various CAD systems, and their efficient use in modelling and viewing.
2. **Analyse** and **apply** two- dimensional and three-dimensional geometric transformations and their concepts.
3. **Discuss** wireframe and surface modelling techniques, including parametric representations and curves.
4. **Evaluate** solid modelling methods and data exchange formats.

|                                                                                                                                                                                                                                                                                                                                                                                                                                              |                               |

### VII SEMESTER

### (MDM3ME105) Product Design and Development

#### Course Outcomes :

Upon successful completion of the course, the students will be able to;

1. Explain the phases of product development and the importance of design thinking in engineering contexts.
2. Apply value engineering, bench-marking, and design optimization techniques to evaluate and improve product designs.
3. Create prototypes integrating ergonomics and rapid prototyping methods.
4. Estimate product costs and demonstrate the application of ergonomic principles and rapid prototyping techniques in design validation.

|                                                                                                                                                                                                                                                                                                                                                                                           |                 |

## B. Tech in Mechanical Engineering

### VIII SEMESTER (MDM3ME106) INDUSTRY 5.0

#### Course Outcomes :

**Upon successful completion of the course, the students will be able to:**

- CO1:** Analyze the key aspects of Industry 5.0. Articulate the recent manufacturing trends related to Industry 5.0 and its implementation.
- CO2:** Interpret concepts and basic framework necessary for smart manufacturing.
- CO3:** Summarize the features of Smart IIoT and its industrial applications. Outline the frameworks for IIoT applications in industries.

|                                                                                                                                                                                                                                                                                                                                                                                                                 |                               |

### Track 2

### V SEMESTER

### (MDM3ME203) Computer Integrated Manufacturing

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Design and evaluate experimentation on CNC machines.
2. Designing of GT cell layouts for transforming into flexible manufacturing system.
3. Compose and transform robot programs various industrial applications.
4. Justify the role of CAPP and CAQC in computer integrated manufacturing.

## B. Tech in Mechanical Engineering

### VI SEMESTER

### (MDM3ME204) Subtractive Manufacturing

#### Course Outcomes :

Upon successful completion of the course the students will be able to

1. Design core, core print and gating system in metal casting processes and net shaped components from metal and ceramic powders.
2. Examine weld joints fabricated through solid state and fusion joining, brazing and soldering techniques.
3. Understand & Analyse the stresses, cutting forces, temperature, power and specific energy in metal cutting with single point cutting tool.
4. Select a modern machining process based on the effect of various process parameters.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |               |

**SoE No.**  
**23ME -101**

## B. Tech in Mechanical Engineering

chips, chip-breakers, Chip reduction coefficient, shear angle, shear strain, Built-Up-Edge and its effect in metal cutting, Merchant's analysis of metal cutting process – Various forces, power and specific energy in cutting, Effect of tool geometry on cutting forces and surface finish

### Unit VI:

**7 Hrs.**

**Modern Machining Processes:** An overview of modern machining processes – Classification, Mechanical Processes – Ultrasonic, water jet and abrasive jet machining - Working principle, application, economy and process selection, Mechanism of material removal, process parameters, Electrochemical Processes – Chemical machining, electro chemical machining - Working principle, application, economy and process selection, Mechanism of material removal, process parameters, Electric Discharge Machining (sinking EDM and Wire cut EDM) - Working principle, application, economy and process selection, Mechanism of material removal, process parameters. CNC machining; Introduction to hardware and software, economic aspects.

**Total Lecture**

**45 Hours**

## B. Tech in Mechanical Engineering

### VII SEMESTER

### (MDM3ME505) Additive Manufacturing

#### Course Outcomes :

**Upon successful completion of the course, the students will be able to:**

1. Understand current technology and additive manufacturing trends, the working principles, and process parameters of additive manufacturing processes
2. Explore different additive manufacturing processes and summarise them with materials, suggesting suitable methods for building a particular component.
3. Design and develop a working model using different techniques.
4. Discuss the contemporary issues in processing software/algorithms and testing.

| Unit I:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 8 Hrs. |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| <b>Additive Manufacturing (AM) Overview &amp; Classification of AM Technologies:</b> Introduction to AM, AM evolution, Distinction between AM & CNC machining, Reverse Engineering, Industry 4.0 design principle - future with AM, smart manufacturing, current industry and manufacturing trends driving AM, Printing process, other applications, and Future trends. Classification of AM technologies, AM process parameters, VAT photopolymerization, Material jetting (MJ), Binder jetting, Material extrusion, Powder bed fusion, Sheet lamination, Directed Energy Deposition (DED), New AM technologies. Contemporary Issues related to Topic: (May be covered in TA/Case Study/Research Paper Study/Visit) Generalized additive manufacturing steps. Other advanced methods can be covered.               |        |
| Unit II:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 7 Hrs. |
| <b>Materials Science for AM:</b> Wire Properties for DED, Powder Properties for PBF, DED, and BJ, Methods of Powder particle production, Mechanical properties of AM printed parts, Defects, Form, fit, function trade-off, time and cost. Types of materials in AM, Multifunctional and graded materials in AM, Role of solidification rate, Evolution of non-equilibrium structure, microstructural studies, Structure-property relationship. <b>Contemporary Issues related to Topic: (May be covered in TA/Research Paper Study/Visit)</b> A case study on non-destructive testing can be discussed/given for the printed part.                                                                                                                                                                                 |        |
| Unit III:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | 8 Hrs. |
| CAD Data Processing for AM: - CAD CAM softwares, Modelling its types, CAD model development and data processing; Overview on Data requirements, Data formats (STL, SLC, CLI, RPI, LEAF, IGES, HP/GL, CT, STEP), Data interfacing, STL File: Introduction-data structure- ASCII-Binary-resolution-deviation & angle tolerance, Manipulation of STL files: Orientation of STL file-support structure-optimal part orientation, topology optimization & techniques, Steps for build file preparation, part orientation and support generation; tessellation, error minimization, firmware interface with 3-D Models, Design of support structure for AM; <b>Contemporary Issues related to Topic: (May be covered in TA/Visit)</b> Transport phenomena models and numerical modeling of the AM process can be covered. |        |
| Unit IV:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 7 Hrs. |
| <b>Process Planning for AM, Slicing Software's, Algorithms &amp; Application of AM:</b> Pre-processing, In-Situ processing, Post-processing, Quality standards for AM, Build strategies, Minimum feature size, Surface finish, and Elimination of support structures, Guidelines for internal geometry like flow paths, cooling channels, cavities, and others.<br>Classification Slicing methods, Tool path planning, Area filling methods, Slicing Software, Algorithms: Uniform                                                                                                                                                                                                                                                                                                                                  |        |

## B. Tech in Mechanical Engineering

### VIII SEMESTER

### (MDM3ME206): Supply Chain Management

#### Course Outcomes :

Upon successful completion of the course, the students will be able to:

1. Explain fundamental supply chain concepts and frameworks. Analyze supply chain performance and apply key performance indicators.
2. Evaluate sourcing, logistics, inventory, and network decisions
3. Use software tools (e.g., Excel, SCM simulation) for modeling and analysis. Recommend improvements in real-life supply chain scenarios.

|                                                                                                                                                                                                                                                                                                                                                                                                                               |                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Unit I:</b>                                                                                                                                                                                                                                                                                                                                                                                                                | <b>8 Hrs.</b>                 |
| <b>Introduction to Supply Chain Management:</b> Definition, objectives and importance , Decision phases in SCM: Strategy, planning, operation, Supply chain drivers and metrics, Role of supply chain in a mechanical/manufacturing enterprise, Facility location and capacity allocation, Network design models.                                                                                                             |                               |
| <b>Unit II:</b>                                                                                                                                                                                                                                                                                                                                                                                                               | <b>7 Hrs.</b>                 |
| <b>Demand Forecasting and Planning:</b> Forecasting methods: qualitative and quantitative, Aggregate planning strategies, Sales and operations planning (S&OP), Role of forecasting in mechanical product industries. Role of transportation and warehouses in network design, Global supply chain design and risk factors                                                                                                    |                               |
| <b>Unit III:</b>                                                                                                                                                                                                                                                                                                                                                                                                              | <b>8 Hrs.</b>                 |
| <b>Inventory and Logistics Management:</b> Inventory types and models (EOQ, safety stock, reorder points), Single- and multi-echelon inventory systems, Transportation strategies and cost models, Warehouse management and layout principles.                                                                                                                                                                                |                               |
| <b>Unit IV:</b>                                                                                                                                                                                                                                                                                                                                                                                                               | <b>7 Hrs.</b>                 |
| <b>Sourcing and Procurement:</b> Supplier selection and evaluation, Outsourcing vs insourcing, Strategic partnerships and supplier relationship management, Contract management in mechanical industries, <b>IT in Supply Chain &amp; Emerging Trends:</b> Role of ERP, SCM software, IoT, and blockchain, E-commerce and digital supply chains, Sustainability in SCM (green SCM), Case studies: Tesla, Amazon, Toyota, etc. |                               |
|                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>Total Lecture 30 Hours</b> |
